META-GUANIDINE, UREA, THIOUREA OR AZACYCLIC AMINO BENZOIC ACID DERIVATIVES AS INTEGRIN ANTAGONISTS

The present application claims priority under 35 USC \$119(e) of United States provisi nal application Serial No. 60/003,277 filed August 30, 1995.

Field of the Invention

The present invention relates to pharmaceutical agents (compounds) which are useful as $\alpha_i\beta_i$ integrin antagonists and as such are useful in pharmaceutical compositions and in methods for treating conditions mediated by $\alpha_i\beta_i$ by inhibiting or antagonizing $\alpha_i\beta_i$ integrins.

1

Background of the Invention

Integrins are a group of cell surface glycoproteins which mediate cell adhesion and therefore are useful mediators of cell adhesion interactions which occur during various biological processes. Integrins are heterodimers composed of noncovalently linked α and β polypeptide subunits. Currently eleven different α subunits have been identified and six different β subunits have been identified. The various α subunits can combine with various β subunits to form distinct integrins.

The integrin identified as α, β_3 (also known as the vitronectin receptor) has been identified as an integrin which plays a role in various conditions or disease states including tumor metastasis, solid tumor growth (neoplasia), osteoporosis, Paget's disease, humoral hypercalcemia of malignancy, angiogenesis, including tumor angiogenesis, retinopathy, arthritis, including rheumatoid arthritis, periodontal disease, psoriasis and smooth muscle cell migration (e.g. restenosis). Additionally, it has been found that such agents would be useful as antivirals, antifungals and antimicrobials. Thus, compounds which selectively

25

30

35

inhibit or antagonize $\alpha_i\beta_i$ would be beneficial for treating such conditions.

It has been sh wn that th $\alpha_n\beta_3$ integrin and ther α_v c ntaining int grins bind to a number of Arg-Gly-Asp (RGD) containing matrix macromolecules. Compounds 5 containing the RGD sequence mimic extracellular matrix ligands so as to bind to cell surface receptors. However, it is also known that RGD peptides in general are non-selective for RGD dependent integrins. example, most RGD peptides which bind to $\alpha_*\beta_3$ also bind 10 to $\alpha_*\beta_3$, $\alpha_*\beta_1$ and $\alpha_{m}\beta_3$. Antagonism of platelet $\alpha_{m}\beta_3$ (also known as the fibrinogen receptor) is known to block platelet aggregation in humans. In order to avoid bleeding side-effects when treating the conditions or disease states associated with the integrin $\alpha_{\nu}\beta_{3}$, it 15 would be beneficial to develop compounds which are selective antagonists of α, β , as opposed to α_{10}, β_{3} .

Tumor cell invasion occurs by a three step process: 1) tumor cell attachment to extracellular matrix; 2) proteolytic dissolution of the matrix; and 3) movement of the cells through the dissolved barrier. This process can occur repeatedly and can result in metastases at sites distant from the original tumor.

Seftor et al. (Proc. Natl. Acad. Sci. USA, Vol. 89 (1992) 1557-1561) have shown that the α,β , integrin has a biological function in melanoma cell invasion. Montgomery et al., (Proc. Natl. Acad. Sci. USA, Vol. 91 (1994) 8856-60) have demonstrated that the integrin α,β , expressed on human melanoma cells promotes a survival signal, protecting the cells from apoptosis. Mediation of the tumor cell metastatic pathway by interference with the α,β , integrin cell adhesion receptor to impede tumor metastasis would be beneficial.

Brooks et al. (Cell, Vol. 79 (1994) 1157-1164) have demonstrated that antagonists of α,β , provide a therapeutic approach for the treatment of neoplasia (inhibition of s lid tumor gr wth) since systemic

10

25

30

35

administration of $\alpha_s\beta_s$ antag nists causes dramatic regression f various hist l gically distinct human tumors.

The adhesion receptor integrin α,β_3 was identified as a marker of angiogenic blood vessels in chick and man and therefore such receptor plays a critical role in angiogenesis or neovascularization. Angiogenesis is characterized by the invasion, migration and proliferation of smooth muscle and endothelial cells. Antagonists of α,β_3 inhibit this process by selectively promoting apoptosis of cells in neovasculature. The growth of new blood vessels, or angiogenesis, also

contributes to pathological conditions such as diabetic retinopathy (Adonis et al., Amer. J. Ophthal., Vol. 118, (1994) 445-450) and rheumatoid arthritis (Peacock et al., J. Exp. Med., Vol. 175, (1992), 1135-1138).

Therefore, $\alpha_s\beta_3$ antagonists would be useful therapeutic targets for treating such conditions associated with neovascularization (Brooks et al., Science, Vol. 264,

20 (1994), 569-571).

It has been reported that the cell surface receptor $\alpha_n \beta_3$ is the major integrin on osteoclasts responsible for attachment to bone. Osteoclasts cause bone resorption and when such bone resorbing activity exceeds bone forming activity it results in osteoporosis (a loss of bone), which leads to an increased number of bone fractures, incapacitation and increased mortality. Antagonists of α, β_3 have been shown to be potent inhibitors of osteoclastic activity both in vitro [Sato et al., J. Cell. Biol., Vol. 111 (1990) 1713-1723] and in vivo [Fisher et al., Endocrinology, Vol. 132 (1993) 1411-1413]. Antagonism of α, β_1 leads to decreased bone resorption and therefore restores a normal balance of bone forming and resorbing activity. Thus it would be beneficial to provide antagonists of osteoclast α, β , which are effective inhibitors of bone res rpti n and therefore ar useful in the treatment or preventi n f osteop rosis.

The role of th $\alpha\beta$, integrin in smooth muscle cell migration also makes it a therapeutic target f r prevention or inhibition f neointimal hyperplasia which is a leading cause of restenosis after vascular procedures (Choi et al., J. Vasc. Surg. Vol. 19(1) (1994) 125-34). Prevention or inhibition of neointimal hyperplasia by pharmaceutical agents to prevent or inhibit restenosis would be beneficial.

White (Current Biology, Vol. 3(9)(1993) 596-599) has reported that adenovirus uses α,β , for entering host cells. The integrin appears to be required for endocytosis of the virus particle and may be required for penetration of the viral genome into the host cell cytoplasm. Thus compounds which inhibit α,β , would find usefulness as antiviral agents.

Summary of the Invention

The present invention relates to a class of compounds represented by the Formula I

20

10

15

25

or a pharmaceutically acceptable salt thereof, wherein

30

35

wherein Y^1 is selected from the group consisting of N-R², O, and S;

R2 is selected from the group consisting of H; alkyl; aryl; hydroxy; alkoxy; cyano; nitro; amino; 5 alkenyl; alkynyl; amido; alkylcarbonyl; arylcarbonyl; alkoxycarbonyl; aryloxycarbonyl; haloalkylcarbonyl; haloalkoxycarbonyl; alkylthiocarbonyl; arylthiocarbonyl; acyloxymethoxycarbonyl; alkyl optionally 10 substituted with one or more substituent selected from lower alkyl, halogen, hydroxyl, haloalkyl, cyano, nitro, carboxyl, amino, alkoxy, aryl or aryl optionally substituted with one or more 15 halogen, haloalkyl, lower alkyl, alkoxy, cyano, alkylsulfonyl, alkylthio, nitro, carboxyl, amino, hydroxyl, sulfonic acid, sulfonamide, aryl, fused aryl, monocyclic heterocycles, or fused monocyclic heterocycles; aryl optionally substituted with one or more substituent selected from halogen, 20 haloalkyl, hydroxy, lower alkyl, alkoxy, methylenedioxy, ethylenedioxy, cyano, nitro, alkylthio, alkylsulfonyl, sulfonic acid, sulfonamide, carboxyl derivatives, amino, aryl, 25 fused aryl, monocyclic heterocycles and fused monocyclic heterocycle; monocyclic heterocycles; and monocyclic heterocycles optionally substituted with one or more substituent selected from halogen, haloalkyl, lower alkyl, alkoxy, amino. 30 nitro, hydroxy, carboxyl derivatives, cyano, alkylthio, alkylsulfonyl, sulfonic acid, sulfonamide, aryl or fused aryl; or

R² taken together with R⁷ forms a 4-12 membered dinitrogen containing heterocycle optionally substituted with one or more substituent selected from the gr up consisting f lower alkyl, hydroxy,

20

25

30

35

ket , alkoxy, halo, ph nyl, amino, carboxyl or carboxyl ester, and fused phenyl;

or R² taken t gether with R⁷ forms a 5 membered

heteroaromatic ring optionally substituted with
one or more substituent selected from lower alkyl,
phenyl and hydroxy;

or R² taken together with R⁷ forms a 5 membered heteroaromatic ring fused with a phenyl group;

 R^7 (when not taken together with R^2) and R^8 are independently selected from the group consisting of H; alkyl; alkenyl; alkynyl; aralkyl; amino; alkylamino; hydroxy; alkoxy; arylamino; amido, alkylcarbonyl, arylcarbonyl; alkoxycarbonyl; aryloxy; aryloxycarbonyl; haloalkylcarbonyl; haloalkoxycarbonyl; alkylthiocarbonyl; arylthiocarbonyl; acyloxymethoxycarbonyl; cycloalkyl; bicycloalkyl; aryl; acyl; benzoyl; alkyl optionally substituted with one or more substituent selected from lower alkyl, halogen, hydroxy, haloalkyl, cyano, nitro, carboxyl derivatives, amino, alkoxy, thio, alkylthio, sulfonyl, aryl, aralkyl, aryl optionally substituted with one or more substituent selected from halogen, haloalkyl, lower alkyl, alkoxy, methylenedioxy, ethylenedioxy, alkylthio, haloalkylthio, thio, hydroxy, cyano, nitro, carboxyl derivatives, aryloxy, amido, acylamino, amino, alkylamino, dialkylamino, trifluoroalkoxy, trifluoromethyl, sulfonyl, alkylsulfonyl, haloalkylsulfonyl, sulfonic acid, sulfonamide, aryl, fused aryl, monocyclic heterocycles, fused monocyclic heterocycles; aryl optionally substituted with one or more substituent selected from halogen, haloalkyl, low r alkyl, alk xy,

10

15

20

25

methylen dioxy, ethylenedi xy, alkylthio, haloalkylthi, thi, hydroxy, cyano, nitro, carboxyl derivatives, aryl xy, amid , acylamino, amin, alkylamino, dialkylamino, trifluoroalkoxy, trifluoromethylsulfonyl, alkylsulfonyl, sulfonic acid, sulfonamide, aryl, fused aryl, monocyclic heterocycles, or fused monocyclic heterocycles; monocyclic heterocycles; monocyclic heterocycles optionally substituted with one or more substituent selected from halogen, haloalkyl, lower alkyl, alkoxy, aryloxy, amino, nitro, hydroxy, carboxyl derivatives, cyano, alkylthio, alkylsulfonyl, aryl, fused aryl; monocyclic and bicyclic heterocyclicalkyls; -SO2R10 wherein R10 is selected from the group consisting of alkyl, aryl and monocyclic heterocycles, all optionally substituted with one or more substituent selected from the group consisting of halogen, haloalkyl, alkyl, alkoxy, cyano, nitro, amino, acylamino, trifluoroalkyl, amido, alkylaminosulfonyl, alkylsulfonyl, alkylsulfonylamino, alkylamino, dialkylamino, trifluoromethylthio, trifluoroalkoxy, trifluoromethylsulfonyl, aryl, aryloxy, thio, alkylthio, and monocyclic heterocycles; and

or NR⁷ and R⁸ taken together form a 4-12 membered mononitrogen containing monocyclic or bicyclic ring optionally substituted with one or more substituent selected from lower alkyl, carboxyl derivatives, aryl or hydroxy and wherein said ring optionally contains a heteroatom selected from the group consisting of O, N and S;

10

15

20

25

R⁵ is selected from th gr up consisting of H, alkyl, alkenyl, alkynyl, benzyl, and phenethyl;

or

wherein Y^2 is selected from the group consisting of alkyl; cycloalkyl; bicycloalkyl; aryl; monocyclic heterocycles; alkyl optionally substituted with aryl which can also be optionally substituted with one or more substituent selected from halo, haloalkyl, alkyl, nitro, hydroxy, alkoxy, aryloxy, aryl, or fused aryl; aryl optionally substituted with one or more substituent selected from halo, haloalkyl, hydroxy, alkoxy, aryloxy, aryl, fused aryl, nitro, methylenedioxy, ethylenedioxy, or alkyl; alkynyl; alkenyl; -S-R9 and -O-R9 wherein R9 is selected from the group consisting of H; alkyl; aralkyl; aryl; alkenyl; and alkynyl; or R9 taken together with R7 forms a 4-12 membered mononitrogen and monosulfur or monooxygen containing heterocyclic ring optionally substituted with lower alkyl, hydroxy, keto, phenyl, carboxyl or carboxyl ester, and fused phenyl; or R' taken together with R⁷ is thiazole; oxazole; benzoxazole; or benzothiazole; and

 R^5 and R^7 are as defined above;

or Y² (when Y² is carbon) taken together with R⁷ forms
a 4-12 membered mononitrogen or dinitrogen
containing ring optionally substituted with alkyl,
aryl, keto or hydr xy;

r A is

5

10

15

where R² and R⁷ taken together form a 5-8 membered dinitrogen containing heterocycle optionally substituted with one or more substituent selected from the group consisting of lower alkyl, hydroxy, keto, phenyl, or carboxyl derivatives; and R⁸ is selected from the group consisting of alkylcarbonyl, arylcarbonyl, alkoxycarbonyl, aryloxycarbonyl, haloalkylcarbonyl, haloalkylcarbonyl, haloalkoxycarbonyl, alkylthiocarbonyl, arylthiocarbonyl, or acyloxymethoxycarbonyl; and

R⁵ is defined as above

20 or A is

25

where R² and R⁷ taken together form a 5-8 membered dinitrogen containing heterocycle optionally substituted with hydroxy, keto, phenyl, or alkyl; and

30

35

R⁸ are both selected from the group consisting of alkylcarbonyl, arylcarbonyl, alkoxycarbonyl, aryloxycarbonyl, haloalkylcarbonyl, haloalkoxycarbonyl, alkylthiocarbonyl, arylthiocarbonyl and acyloxymethoxycarbonyl;

Z¹ is one r more substituent selected from the group consisting of H; alkyl; hydroxy; alkoxy; aryloxy; halogen; hal alkyl; haloalkoxy; nitr; amino; alkylamin; acylamin; dialkylamino; cyano; alkylthio; alkylsulfonyl; carboxyl derivatives; trihaloacetamide; acetamide; aryl; fused aryl; cycloalkyl; thio; monocyclic heterocycles; fused monocyclic heterocycles; and A, wherein A is defined above;

10

15

20

5

V is selected from the group consisting of -N-(R⁶)-wherein R⁶ is selected from the group consisting of H; lower alkyl; cycloalkyl; aralkyl; aryl; and monocyclic heterocycles; or R⁶ taken together with Y, forms a 4-12 membered mononitrogen containing ring;

Y, Y³, Z and Z³ are independently selected from the group consisting of hydrogen; alkyl; aryl; and cycloalkyl; or Y and Z taken together form a cycloalkyl; or Y³ and Z³ taken together form a cycloalkyl;

n is an integer 1, 2, or 3;

25

t is an integer 0, 1, or 2;

p is an integer 0, 1, 2, or 3;

R is X-R³ wherein X is selected from the group consisting of O, S and NR⁴, wherein R³ and R⁴ are independently selected from the group consisting of hydrogen; alkyl; alkenyl; alkynyl; haloalkyl; aryl; arylalkyl; sugars; steroids; polyalkylethers; alkylamido; alkyl N,N-dialkylamido; pivaloyloxymethyl; and in the case

10

15

R¹¹ is selected from the group consisting of H, alkyl, aralkyl, alkenyl, alkynyl, haloalkyl or haloalkynyl or R¹¹ taken together with Y forms a 4-12 membered mononitrogen containing ring.

It is another object of the invention to provide pharmaceutical compositions comprising compounds of the Formula I. Such compounds and compositions are useful in selectively inhibiting or antagonizing the $\alpha_i\beta_3$ integrin and therefore in another embodiment the present invention relates to a method of selectively inhibiting or antagonizing the $\alpha_i\beta_3$ integrin. The invention further involves treating or inhibiting pathological conditions associated therewith such as osteoporosis, humoral hypercalcemia of malignancy, Paget's disease, tumor metastasis, solid tumor growth (neoplasia), angiogenesis, including tumor

angiogenesis, retinopathy including diabetic retinopathy, arthritis, including rheumatoid arthritis, period ntal disease, psoriasis, sm th muscle cell migration and restenosis in a mammal in need of such treatment. Additionally, such pharmaceutical agents are useful as antiviral agents, and antimicrobials.

<u>Detailed Description</u>

The present invention relates to a class of compounds represented by the Formula I, described above.

A preferred embodiment of the present invention is a compound of the Formula II

20

25

wherein R⁵, R⁷ and R⁶ are independently selected from H, alkyl, aryl, carboxyalkyl, substituted aryl, substituted arylsulfonyl, and arylalkyl or NR⁷ and R⁶ taken together form a 4-12 membered mononitrogen containing ring optionally substituted and the other variables are as described in Formula I.

Another preferred embodiment of the present invention is a compound of the Formula III

35

10

35

wherein Y^1 is $-NR^2$ and R^2 taken togeth r with R^7 forms an opti nally substituted 4-12 membered ring and the other variables are as defined above in F rmula I.

An ther preferred embodiment of the present invention is a compound of the Formula IV

wherein Y^2 taken together with R^7 forms a 4-12 membered ring and the other variables are as defined above in Formula I.

Another preferred embodiment of the present invention is a compound of the Formula V

wherein the variables are as defined above in Formula I.

The invention further relates to pharmaceutical compositions containing therapeutically effective amounts of the compounds of Formulas I-V.

The invention also relates to a method of selectively inhibiting or antagonizing the $\alpha_i\beta_i$ integrin and more specifically relates to a method of inhibiting bone resorption, periodontal disease, osteoporosis, humoral hypercalcemia of malignancy, Paget's disease, tumor metastasis, solid tum r growth (ne plasia),

15

20

25

angiogenesis, including tumor angiogenesis, retinopathy including diabetic retinopathy, arthritis, including rheumat id arthritis, smooth muscl cell migration and restenosis by administering a therapeutically effective amount of a compound of the Formula I-V to achieve such inhibition together with a pharmaceutically acceptable carrier.

The following is a list of definitions of various terms used herein:

As used herein, the terms "alkyl" or "lower alkyl" refer to a straight chain or branched chain hydrocarbon radicals having from about 1 to about 10 carbon atoms, and more preferably 1 to about 6 carbon atoms.

Examples of such alkyl radicals are methyl, ethyl, n-propyl, isopropyl, n-butyl, isobutyl, sec-butyl, t-butyl, pentyl, neopentyl, hexyl, isohexyl, and the like.

As used herein the terms "alkenyl" or "lower alkenyl" refer to unsaturated acyclic hydrocarbon radicals containing at least one double bond and 2 to about 6 carbon atoms, which carbon-carbon double bond may have either <u>cis</u> or <u>trans</u> geometry within the alkenyl moiety, relative to groups substituted on the double bond carbons. Examples of such groups are ethenyl, propenyl, butenyl, isobutenyl, pentenyl, hexenyl and the like.

As used herein the terms "alkynyl" or "lower alkynyl" refer to acyclic hydrocarbon radicals containing one or more triple bonds and 2 to about 6 carbon atoms. Examples of such groups are ethynyl, propynyl, butynyl, pentynyl, hexynyl and the like.

The term "cycloalkyl" as used herein means saturated or partially unsaturated cyclic carbon radicals containing 3 to about 8 carbon atoms and more preferably 4 to about 6 carbon atoms. Examples of such cycloalkyl radicals include cyclopropyl, cyclopropenyl,

cyclobutyl, cyclopentyl, cyclohexyl, 2-cyclohexen-1-yl, and the like.

The term "aryl" as used herein den tes aromatic ring systems c mposed f ne or more aromatic rings. Preferred aryl groups are those consisting of one, two or three aromatic rings. The term embraces aromatic radicals such as phenyl, pyridyl, naphthyl, thiophene, furan, biphenyl and the like.

As used herein, the term "cyano" is represented by

10 a radical of the formula CN.

The terms "hydroxy" and "hydroxyl" as used herein are synonymous and are represented by a radical of the formula HOH.

The term "lower alkylene" or "alkylene" as used herein refers to divalent linear or branched saturated hydrocarbon radicals of 1 to about 6 carbon atoms.

As used herein the term "alkoxy" refers to straight or branched chain oxy containing radicals of the formula -OR²⁰, wherein R²⁰ is an alkyl group as defined above. Examples of alkoxy groups encompassed include methoxy, ethoxy, n-propoxy, n-butoxy, isopropoxy, isobutoxy, sec-butoxy, t-butoxy and the like.

As used herein the terms "arylalkyl" or "aralkyl"

25 refer to a radical of the formula R2—R2 wherein R21

is aryl as defined above and R2 is an alkylene as defined above. Examples of aralkyl groups include benzyl, pyridylmethyl, naphthylpropyl, phenethyl and the like.

As used herein the term "nitro" is represented by a radical of the formula $\frac{1}{2}$ NO_2 .

As used her in th term "halo" r "halogen" refers t bromo, chloro, fluoro or iod .

As used herein the term "haloalkyl" refers to alkyl groups as defined above substituted with one or more of the same or different halo groups at one or more carbon atom. Examples of haloalkyl groups include trifluoromethyl, dichloroethyl, fluoropropyl and the like.

As used herein the term "carboxyl" or "carboxy" 10 refers to a radical of the formula -COOH.

As used herein the term "carboxyl ester" refers to a radical of the formula $-COOR^{23}$ wherein R^{23} is selected from the group consisting of H, alkyl, aralkyl or aryl as defined above.

As used herein the term "carboxyl derivative"

refers to a radical of the formula || wherein —C-Y7R23

 Y^6 and Y^7 are independently selected from the group consisting of O, N or S and R^{23} is selected from the group consisting of H, alkyl, aralkyl or aryl as defined above.

As used herein the term "amino" is represented by a radical of the formula -NH2.

As used herein the term "alkylsulfonyl" or "alkylsulfone" refers to a radical of the formula

25 RM wherein RM is alkyl as defined above.

As used herein the term "alkylthio" refers to a radical of the formula $-SR^{2}$ wherein R^{2} is alkyl as defined above.

As used herein the term "sulfonic acid" refers to a radical f the f rmula S-ORM wherein R25 is H,

alkyl or aryl as defined above.

As used herein the term "sulfonamide" refers to a

radical of the formula $\begin{bmatrix} 0 & R^7 \\ -S & N \end{bmatrix}$ wherein R^7 and R^8 are as

defined above.

10

15

20

As used herein the term "fused aryl" refers to an aromatic ring such as the aryl groups defined above fused to one or more phenyl rings. Embraced by the term "fused aryl" is the radical naphthyl.

As used herein the terms "monocyclic heterocycle" or "monocyclic heterocyclic" refer to a monocyclic ring containing from 4 to about 12 atoms, and more preferably from 5 to about 10 atoms, wherein 1 to 3 of the atoms are heteroatoms selected from the group consisting of oxygen, nitrogen and sulfur with the understanding that if two or more different heteroatoms are present at least one of the heteroatoms must be nitrogen. Representative of such monocyclic heterocycles are imidazole, furan, pyridine, oxazole, pyran, triazole, thiophene, pyrazole, thiazole, thiadiazole, and the like.

As used herein the term "fused monocyclic heterocycle" refers to a monocyclic heterocycle as defined above with a benzene fused thereto. Examples of such fused monocyclic heterocycles include benzofuran, benzopyran, benzodioxole, benzothiazole, benzothiophene, benzimidazole and the like.

As used herein the term "methylenedi xy" r fers to

As used herein the term #4-12 membered dinitrogen containing heterocycle refers to a radical of the

15

wherein m is 1 or 2 and R19 is

H, alkyl, aryl, or aralkyl and more preferably refers to 4-9 membered ring and includes rings such as imidazoline.

As used herein the term "5-membered optionally substituted heteroaromatic ring" includes for example a

"5-membered heteroaromatic ring fused with a phenyl" refers to such a "5-membered heteroaromatic ring" with a phenyl fused thereto. Representative of such 5-membered heteroaromatic rings fused with a phenyl is benzimidazole.

10

As used herein the term "bicycloalkyl" refers t a bicyclic hydrocarbon radical containing 6 to about 12 carbon atoms which is saturated or partially unsaturated.

As used herein the term "acyl" refers to a radical of the formula \mathbb{R}^{26} is alkyl, alkenyl,

alkynyl, aryl or aralkyl and optionally substituted thereon as defined above. Encompassed by such radical are the groups acetyl, benzoyl and the like.

As used herein the term "thio" refers to a radical of the formula SH.

As used herein the term "sulfonyl" refers to a radical of the formula $\begin{bmatrix} 0 \\ -S \\ -R^{27} \end{bmatrix}$ wherein R^{27} is alkyl,

aryl or aralkyl as defined above.

15

As used herein the term "haloalkylthio" refers to a radical of the formula $-S-R^{28}$ wherein R^{28} is haloalkyl as defined above.

As used herein the term "aryloxy" refers to a

20 radical of the formula OR29 wherein R29 is aryl as

defined above.

As used herein the term "acylamino" refers to a radical of the formula R³⁰ C-NH wherein R³⁰ is alkyl, aralkyl r aryl as defin d above.

As used herein the term "alkylamino" refers to a radical of the formula $-NHR^{32}$ wherein R^{32} is alkyl as defined above.

As used herein the term "dialkylamino" refers to a radical of the formula $-NR^{33}R^{34}$ wherein R^{33} and R^{34} are the same or different alkyl groups as defined above.

As used herein the term "trifluoromethyl" refers

10 to a radical of the formula CF3.

As used herein the term "trifluoroalkoxy" refers to a radical of the formula $F_3C-R^{35}-O$ wherein R^{35} is

a bond or an alkylene as defined above.

As used herein the term "alkylaminosulfonyl"

15 refers to a radical of the formula RX-N-S wherein

R36 is alkyl as defined above.

As used herein the term "alkylsulfonylamino"

wherein R^{36} is alkyl as defined above.

As used herein the term "trifluoromethylthio" refers to a radical of the formula F_3C-S .

15

20

As used herein the term "trifluor methylsulfonyl" refers to a radical f the f rmula F_3C — $\begin{bmatrix} 0 \\ -1 \\ 0 \end{bmatrix}$.

As used herein the term "4-12 membered mononitrogen containing monocyclic or bicyclic ring" refers
to a saturated or partially unsaturated monocyclic or
bicyclic ring of 4-12 atoms and more preferably a ring
of 4-9 atoms wherein one atom is nitrogen. Such rings
may optionally contain additional heteroatoms selected
from nitrogen, oxygen or sulfur. Included within this
group are morpholine, piperidine, piperazine,
thiomorpholine, pyrrolidine, proline, azacycloheptene
and the like.

As used herein the term "benzyl" refers to the radical $-cH_2$.

As used herein the term "phenethyl" refers to the radical |-cmcm-

As used herein the term "4-12 membered mononitrogen containing monosulfur or monooxygen containing heterocyclic ring" refers to a ring consisting of 4 to 12 atoms and more preferably 4 to 9 atoms wherein at least one atom is a nitrogen and at least one atom is oxygen or sulfur. Encompassed within this definition are rings such as thiazoline and the like.

As used herein the term "arylsulfonyl" or 25 "arylsulfone" refers to a radical of the formula

$$R^{37}$$
— S — $\frac{1}{1}$ wherein R^{37} is aryl as defined above.

As used herein the terms "alkylsulfoxide" r "arylsulf xide" refer t radicals of the formula

Note that the second of the se

defined above.

5

As used herein the term "phosphonic acid derivative" refers to a radical of the formula

wherein R^{39} and R^{40} are the same or different H, alkyl, aryl or aralkyl.

As used herein the term "phosphinic acid derivatives" refers to a radical of the formula

defined above.

As used herein the term "arylthio" refers to a radical of the formula $\frac{1}{2}$ -SRQ wherein RQ is aryl as

15 defined above.

As used herein the term "monocyclic heterocycle thio" refers to a radical of the formula SRG

wherein \mathbb{R}^G is a monocyclic heterocycle radical as defined above.

As used herein the terms "monocyclic heterocycle sulfoxide" and "monocyclic heterocycle sulfone" refer,

respectively, to radicals of the formula S-Ro and

O | | S | R | wherein R | is a monocyclic heterocycle radical O

as defined above.

As used herein the term "alkylcarbonyl" refers to a radical of the formula $\frac{O}{R^{50}-C}$ wherein R^{50} is alkyl as

5 defined above.

As used herein the term "arylcarbonyl" refers to a radical of the formula $\begin{array}{c} O \\ R^{51}-C- \end{array}$ wherein R^{51} is aryl as

defined above.

As used herein the term "alkoxycarbonyl" refers to O a radical of the formula O wherein R^{Ω} is alkoxy $R^{\Omega}-C$ —

As used herein the term "aryloxycarbonyl" refers to a radical of the formula $\begin{array}{c} O \\ R^{51}-O-C- \end{array}$ wherein R^{51} is aryl

as defined above.

as defined above.

As used herein the term "haloalkylcarbonyl" refers to a radical of the formula $\begin{array}{c} O \\ R^{53}-C- \end{array}$ wherein R^{53} is

haloalkyl as defined above.

i

As used herein the term "haloalkoxycarbonyl" refers to a radical of the f rmula $\begin{array}{c} O \\ R^{53}-O-C- \end{array}$ wherein R^{53}

is haloalkyl as defined above.

As used herein the term "alkylthiocarbonyl" refers

5 to a radical of the formula \mathbb{R}^{50} —S—C— wherein \mathbb{R}^{50} is

alkyl as defined above.

As used herein the term "arylthiocarbonyl" refers to a radical of the formula $\begin{array}{c} O \\ R^{51}-S-C- \end{array}$ wherein R^{51} is

aryl as defined above.

As used herein the term "acyloxymethoxycarbonyl" refers to a radical of the formula

 R^{54} -O-CH₂-O-C- wherein R^{54} is acyl as defined above.

As used herein the term "arylamino" refers to a radical of the formula R^{51} -NH- wherein R^{51} is aryl as defined above.

As used herein the term "polyalkylether" refers to commonly used glycols such as triethyleneglycol, tetraethylene glycol, polyethylene glycol and the like.

As used herein the term "alkylamido" refers to a

20 radical of the formula $\begin{array}{c} O \\ \parallel \\ R^{50}-NH-C- \end{array}$ wherein R^{50} is alkyl as

defined above.

15

15

20

25

As used herein the term "N,N-dialkylamido" refers

t a radical f the formula R50 N-C wherein R50 is

the same or different alkyl group as defined above.

As used herein the term "pivaloyloxymethyl" refers

As used herein the term "acyloxy" refers to a radical of the formula R^{SS} -O- wherein R^{SS} is acyl as defined above.

The term "composition" as used herein means a product which results from the mixing or combining of more than one element or ingredient.

The term "pharmaceutically acceptable carrier", as used herein means a pharmaceutically-acceptable material, composition or vehicle, such as a liquid or solid filler, diluent, excipient, solvent or encapsulating material, involved in carrying or transporting a chemical agent.

The term "therapeutically effective amount" shall mean that amount of drug or pharmaceutical agent that will elicit the biological or medical response of a tissue, system or animal that is being sought by a researcher or clinician.

The following is a list of abbreviations and the corresponding meanings as used interchangeably herein:

iH-NMR = proton nuclear magnetic resonance
AcOH = acetic acid
BH₃-THF = borane-tetrahydrofuran complex
Bn = benzyl

BOC = tert-butoxycarbonyl
ButLi = butyl lithium
Cat. = catalytic amount
CH₂Cl₂ = dichloromethane

The compounds as shown in Formulas I-V can exist in various isomeric forms and all such isomeric forms are meant to be included. Tautomeric forms are also included as well as pharmaceutically acceptable salts of such isomers and tautomers.

In the structures and formulas herein, a bond drawn across a bond of a ring can be to any available atom on the ring.

The term "pharmaceutically acceptable salt" refers 25 to a salt prepared by contacting a compound of Formula I with an acid whose anion is generally considered suitable for human consumption. Examples of pharmacologically acceptable salts include the hydrochloride, hydrobromide, hydroiodide, sulfate, 30 phosphate, acetate, propionate, lactate, maleate, malate, succinate, tartrate salts and the like. All of the pharmacologically acceptable salts may be prepared by conventional means. (See Berge et al., J Pharm. Sci., 66(1), 1-19 (1977) for additional examples of 35 pharmaceutically acceptable salts.)

For the selective inhibition or antagonism of $\alpha_1\beta_3$ integrins, compounds of the present invention may be administered orally, parenterally, or by inhalation spray, or topically in unit dosage formulations containing conventional pharmaceutically acceptable carriers, adjuvants and vehicles. The term parenteral as used her in includ s, for example, subcutane us,

10

15

20

25

30

intravenous, intramuscular, intrasternal, infusi n techniques or intraperitonally.

The comp unds of the present invention are administered by any suitable route in the f rm f a pharmaceutical composition adapted to such a route, and in a dose effective for the treatment intended. Therapeutically effective doses of the compounds required to prevent or arrest the progress of or to treat the medical condition are readily ascertained by one of ordinary skill in the art using preclinical and clinical approaches familiar to the medicinal arts.

Accordingly, the present invention provides a method of treating conditions mediated by selectively inhibiting or antagonizing the α, β , cell surface receptor which method comprises administering a therapeutically effective amount of a compound selected from the class of compounds depicted in Formulas I-V, wherein one or more compounds of the Formulas I-V is administered in association with one or more non-toxic, pharmaceutically acceptable carriers and/or diluents and/or adjuvants (collectively referred to herein as "carrier" materials) and if desired other active ingredients. More specifically, the present invention provides a method for inhibition of the α, β_1 cell surface receptor. Most preferably the present invention provides a method for inhibiting bone resorption, treating osteoporosis, inhibiting humoral hypercalcemia of malignancy, treating Paget's disease, inhibiting tumor metastasis, inhibiting neoplasia (solid tumor growth), inhibiting angiogenesis including tumor angiogenesis, treating diabetic retinopathy, inhibiting arthritis, psoriasis and periodontal disease, and inhibiting smooth muscle cell migration including restenosis.

Based upon standard laboratory experimental techniques and procedures well known and appreciated by those skilled in the art, as well as comparisons with

15

20

30

35

compounds of kn wn usefulness, the c mpounds of Formula I can be used in th treatment f patients suffering from the above path logical c nditions. One skilled in the art will rec gnize that selection of the most appropriate compound of the invention is within the ability of one with ordinary skill in the art and will depend on a variety of factors including assessment of results obtained in standard assay and animal models.

Treatment of a patient afflicted with one of the pathological conditions comprises administering to such 10 a patient an amount of compound of the Formula I which is therapeutically effective in controlling the condition or in prolonging the survivability of the patient beyond that expected in the absence of such treatment. As used herein, the term "inhibition" of the condition refers to slowing, interrupting, arresting or stopping the condition and does not necessarily indicate a total elimination of the condition. It is believed that prolonging the survivability of a patient, beyond being a significant advantageous effect in and of itself, also indicates that the condition is beneficially controlled to some extent.

As stated previously, the compounds of the 25 invention can be used in a variety of biological, prophylactic or therapeutic areas. It is contemplated that these compounds are useful in prevention or treatment of any disease state or condition wherein the α, β_3 integrin plays a role.

The dosage regimen for the compounds and/or compositions containing the compounds is based on a variety of factors, including the type, age, weight, sex and medical condition of the patient; the severity of the condition; the route of administration; and the activity of the particular compound employed. Thus the dosage regimen may vary widely. Dosage levels of the rder from about 0.01 mg to about 100 mg per kilogram

of body weight p r day are useful in the treatment of the ab ve-indicated c nditions.

The active ingredient administered by injection is formulated as a compositi n wherein, for example, saline, dextrose or water may be used as a suitable carrier. A suitable daily dose would typically be about 0.01 to 10 mg/kg body weight injected per day in multiple doses depending on the factors listed above.

5

15

20

25

30

35

For administration to a mammal in need of such 10 treatment, the compounds in a therapeutically effective amount are ordinarily combined with one or more adjuvants appropriate to the indicated route of administration. The compounds may be admixed with lactose, sucrose, starch powder, cellulose esters of alkanoic acids, cellulose alkyl esters, talc, stearic acid, magnesium stearate, magnesium oxide, sodium and calcium salts of phosphoric and sulphuric acids, gelatin, acacia, sodium alginate, polyvinylpyrrolidone, and/or polyvinyl alcohol, and tableted or encapsulated for convenient administration. Alternatively, the compounds may be dissolved in water, polyethylene glycol, propylene glycol, ethanol, corn oil, cottonseed oil, peanut oil, sesame oil, benzyl alcohol, sodium chloride, and/or various buffers. Other adjuvants and modes of administration are well and widely known in the pharmaceutical art.

The pharmaceutical compositions useful in the present invention may be subjected to conventional pharmaceutical operations such as sterilization and/or may contain conventional pharmaceutical adjuvants such as preservatives, stabilizers, wetting agents, emulsifiers, buffers, etc.

The general synthetic sequences for preparing the compounds useful in the present invention are outlined in Schemes I-XXI. Both an explanation of, and the actual procedures for, the various aspects of the present invention are described where appropriate.

following Schemes and Examples are intended to be merely illustrative of the present invention, and n t limiting there f in either scope or spirit. Those with skill in the art will readily understand that known variations of the conditions and processes described in the Schemes and Examples can be used to synthesize the compounds of the present invention.

Unless otherwise indicated all starting materials and equipment employed were commercially available.

10

SCHEME I

$$\begin{array}{c|c} HO \longrightarrow & \\ \hline \Delta & H_2N \longrightarrow & \\ \hline \end{array} \qquad \left(\begin{array}{c} \downarrow \end{array} \right)$$

15

Scheme I describes a synthesis of a pyridyl β aminoacid which can be used to synthesize c mpounds of
the present invention wherein R^1 is pyridyl. The
reacti n can be modifi d using c nventi nal meth dology
to prepare other aromatic, alkyl or heterocyclic
substituted β -amino acids by substitution of the
pyridyl carboxaldehyde with any other appropriate
aldehyde. Briefly, in Scheme I to pyridinecarboxaldehyde in isopropanol is added ammonium acetate
followed by malonic acid. The reaction mixture is
stirred at reflux, the resulting precipitate filtered
and washed with hot isopropanol and dried to yield 3amino-3-(3-pyridyl) propionic acid. The ethyl ester is
synthesized by heating this acid in excess ethanol in
the presence of excess HCl gas.

Additionally, β -amino acids which are useful in the present invention are accessible through modified Knoevenagel reactions (Secor, H.V.; Edwards, W.B.J. J. Org. Chem. 1979, 44, 3136-40; Bellasoued, M.; Arous-Chtar, R.; Gaudemar, M.J.; J. Organometal. Chem. 1982, 20 231, 185-9), through Reformatski reaction with Schiff bases (Furukawa, M.; Okawara, T.; Noguchi, Y.; Terawaki, Y. Chem. Pharm. Bull. 1978, 26, 260), Michael addition into an acrylic derivative (Davies, S.G.; Ichihara, O. Tetrahedron: Asymmetry 1991, 2, 183-6; 25 Furukawa, M.; Okawara, TR.; Terawaki, Y. Chem. Pharm. Bull., 1977, 25, 1319-25). More recent methods include the use of organometallic reagents in Pd or Zn mediated couplings (Konopelski, J.; Chu, K.S.; Negrete, G.R. J. Org. Chem. 1991, 56, 1355; Mokhallalati, M.K.; Wu, M-30 J.; Prigden, L.N. Tetrahedron Lett. 1993, 34, 47-50) to complement more traditional reactions such as reductive amination of β -ketoesters.

The racemic beta-alkyl beta amino esters can also conveniently be prepared from the corresponding beta lactam by treatment with anhydrous HCl gas in ethanol. The beta lactams were prepared from the corresponding

alkene and chl rosulf nyl isocyanate (Szabo, W.A. Aldrichimica Acta, 1977, 23 and references cited ther in). The latter method is useful for the preparation of α and β -substituted β -aminoacids.

- (Manhas, M.S.; Wagle, D.R.; Chong, J.; Bose, A.K. <u>Heterocycles</u>, 1988, 27, 1755.) Another route to αsubstituted β-aminoacids is the Raney Nickel reduction of cyanoacetic esters at temperatures ranging between 20 and 80°C and at 20 to 100 atm pressure (Testa, E.;
- Fontanella, L.; Fava, F. Fermaco Ed. Sci., 1958, 13, 152; Testa, E.; Fontanella, L. Annalen 1959, 625, 95). Also, a number of procedures are available for the preparation of β -aminoacids by reduction of hydrazones of keto-acids (Gootijes, J.; Nomte, W.Th. Rec. Trav.
- Chem. 1953, 72, 721), oximes (Anziegin, A.; Gulewivich, W. Z. Physiol. Chem., 1926, 158, 32) and nitropropionic acids. Purification of final compounds is usually by reverse phase high performance liquid chromatography (RP HPLC) [High Performance Liquid Chromatography
- Protein and Peptide Chemistry, F. Lottspeich, A. Henscher, K.P. Hupa, (eds.) Walter DeGruyter, New York, 1981] or crystallization.

- 36 -

SCHEME II

15

Scheme II is illustrative f meth dology useful for coupling an α -amino acid to the β -amino acid comp unds prepared in Scheme I. The compounds thus pr pared are us ful f r coupling to substituted benzoic acid compounds to prepare the desired compounds of the present invention. Such methodology can be modified using conventional methodology to couple other aminoalkyl acids to the β -amino esters prepared in Scheme I.

Briefly, in Scheme II, to a solution of t-Bocglycine in DMF is added N-methylmorpholine followed by isobutylchloroformate. In a separate flask, the substituted β -amino ester in DMF is mixed with Nmethylmorpholine. The two mixtures are combined and stirred at room temperature to yield

The resulting product is deprotected using HCl/Dioxane to give (B).

<u>SCHEME III</u>

15

Scheme III is illustrative of methodology useful for preparing the quanidinobenz ic acid portion of the present invention which can be used f r coupling to the gly- β -amino acid. This can als be accomplished using other appropriate quanidating reagents known to those skilled in the art for example using pyrazole-carboxamidine·HCl (Aldrich). The methodology of Scheme III can be modified using conventional techniques and methods to prepare alternate compounds useful for coupling to the β -amino acids.

Briefly, in Scheme III, to 3,5-dimethylpyrazole-1-carboxamidine nitrate in dioxane, water and DIEA, is added 3-aminobenzoic acid. The mixture is stirred at reflux, the precipitate filtered, washed and dried. The precipitate is then further slurried in water, acidified with HCl and concentrated. The solvent is removed and the residue slurried in ether and dried to yield 3-guanidinobenzoic acid hydrochloride (C).

SCHEME IV

· 2TFA

Scheme IV illustrates methodology useful for coupling the guanidin benz ic acid (C) to the β -amino ester (B) portin f the d sired compounds of th present invention. Such methodology can be modified using conventional methods known to those having ordinary skill in the art.

Briefly, in Scheme IV to the 3-guanidinobenzoic acid (C) (prepared in Scheme III) in DMF and N-methylmorpholine was added isobutylchloroformate. The reaction was stirred and a slurry of the β-amino ester compound (B) (prepared in Scheme II) in DMF and N-methylmorpholine was added portionwise. The reaction was stirred, the precipitate filtered and washed with DMF. The DMF was removed. The resulting ester is dissolved in water, washed with ether and LiOH is added to the aqueous layer and stirred for approximately 1 hour. The solution is treated with trifluoroacetic acid to pH=5 and the product purified by RPHPLC to yield the desired compounds (D).

t

Scheme V is illustrative f method logy useful for preparing various compounds of the present invention. Such method logy is more specifically defined in the f llowing examples and in Schemes I-IV. Such methodology can be modified by one skilled in the art, substituting known reagents and conditions from conventional methodology to produce the desired compounds.

Specifically, in Scheme V, Step C:

In the synthesis of intermediate benzoic acids

(A1) through (A14), the starting amino benzoic acids

can be converted to such amino benzoic acids via reduction of the corresponding nitro benzoic acid, which can be obtained commercially or syntheized by nitration of the appropriate benzoic acid, followed by reduction to the desired amino benzoic acid. These are all when R⁵ is H. If R⁵ is other than H, alkylation of the amino functionality can be achieved by conventional methodology.

Furthermore, synthesis of intermediate (A2) can also be accomplished as disclosed generally in US 3,202,660, starting with the appropriate amino benzoic acid.

can be synthesized from
$$NH$$
 and $(Me)_3OBF_4$ in

dichloromethane.

10

15

(A4), can be synthesized from Y^2 -CN and MeOH (1 equivalent) and HCl gas (1 equivalent) in heptane.

All other reagents in Scheme V are either commercially available or readily synthesized by methodologies known by those skilled in the art.

Coupling of the intermediates from Scheme V, Step C [(A1) through (A14)] with the intermediate (F) (from Scheme V Step B) can be accomplished using other coupling reagents known to those skilled in the art in addition to the mixed anhydride method described in Scheme V Step D, to give the final desired products.

Z¹⁰ is defined the same as Z¹

10

Scheme VA is illustrative f methodology useful for the preparation f aldehydes (R^I) which are n t commercially available, and are used in the preparation of β -amino acids as in Scheme V, Step A. Such β -amino acids are then further used to synthesize the compounds of the present invention as further exemplified in Scheme V, Steps A through D.

Other such methodologies known to those skilled in the art are available and can also be used to synthesize aldehydes useful in preparing compounds of the present invention. ;

SCHEME VI (A)

wherein HN denotes an amino acid, the amino acid R^8

30 being protected with the appropriate protecting groups.
Additional methodologies for further R¹ groups are as follows:

SCHEME XII (cont'd)

*These can all be further used as an intermediate such

as (2) in the various Schemes used to exemplify the
method of synthesis of the compounds of the present
invention.

SCHEME XII (cont'd)

In a similar manner, compounds f the present invention wherein R¹ is substituted alkyl can be synthesized in the following manner:

SCHEME XIIA

:

Scheme XII A utlines the synthesis of protected aspartyl aldehyd from aspartyl alc hol prepared in Scheme XII using Swern oxidation pr cedures and elaboration of the aldehyde by reaction with a nucleophile, e.g., either a commercially available Grignard Reagent or a Grignard Reagent prepared by standard procedures, to afford the C-4, R_1 -substituted aspartyl alcohol derivative. The primary amine product may be prepared by removing the BOC group by employing standard acidic conditions to provide the intermediate β -amino acids (e.g. Scheme I). The BOC protected C-4 substituted alcohol may be converted to the ketoderivative by a second Swern oxidation followed by BOC removal to give the desired intermediate amine (e.g. Scheme I).

SCHEME XIII

To synthesize c mpounds wherein

which is then treated in the same manner of further derivatization as exemplified in the previous schemes for:

:

SCHEME XIV

Scheme XIV represents the synthesis of aminohydr coumarins (see J. Rico, <u>Tett. Let.</u>, <u>1994</u>, 35, 6599-6602) which are readily opened to f rm R¹ being an rthohydroxyphenyl m iety, further substituted by Z¹.

SCHEME XIV A

Z10 is the same as defined in Z1

Scheme XIV A represents the synthesis of aminohydrocoumarine esters from the aminohydrocoumarine of Scheme XIV and subsequent coupling with intermediates (H) from Scheme VII(B) using either activation of (H) by DSC/NMM/DMF or IBCF/NMM/DMF followed by aminohydrocoumarine ster hydrochloride salt/NMM. Subsequent hydrolysis using standard conditions resulted in formation of the carboxylic acid derivative.

SCHEME XIV B

Z10 is defined the same as Z1

Scheme XIV B represents the synthesis of 4aminohydrothic umarin from thiccoumarins.

Thiccoumarins are readily prepar d according to J.A.

Panetta and H. Rapoport, J. Org. Chem., 1982, 47, 26262628 and references cited therein and may be converted to the 4-aminohydrothiccoumarin derivative according to the general procedure of Scheme XIV. Coupling of the aminohydrothiccoumarin to intermediate (H) from Scheme VII(B) can be achieved using methodology similar to

Scheme XIV and XIV A. Hydrolysis to give the carboxylate-thicl product is readily achieved using a base (e.g. LiOH or NaOH) in an aqueous organic solvent.

;

Scheme XVI represents an alternate synthesis of the c mpounds f the present invention wherein A is represented by cyclic guanidines. Alternate reagents and materials known t these skilled in the art can be substituted appropriately as readily recognized by one skilled in the art to produce the desired compounds.

from Scheme VIB and reference (2) reference (2) = Sci. Pharm. (1989), 57(4), 375-80.

Scheme XXI further illustrates examples of potential pro-drugs or activ entities of compounds of the present invention.

In particular, Schem XXI illustrates the synthesis of N-hydroxy or N-alkoxy analogues of cyclic and acyclic guanidine compounds.

The cited references provide synthetic details of the appropriate derivatization of the anilines exemplified in Scheme VIB.

Example A

Preparation of benzyl-3-N-t-B c-amino-4-hydr xy-(3S)-butyrate

5

10

15

20

N-t-Boc-L-aspartic acid, β -benzyl ester (75 g, 20 mmol) was dissolved in THF (30 ml) and added dropwise over a period of 30 minutes to BH₃-THF (400 ml, 40 mmol) at 0°C under a N₂ atmosphere. After the solution was stirred for 2.5 hours at 0°C, the reaction was quenched with 10% acetic acid in MeOH (50 ml), and the solvent was evaporated. The residue was dissolved in ether (200 ml) and washed with 1N HCl, saturated K₂CO₃, water and dried over MgSO₄. The product was isolated by removal of the solvent in vacuo (mp 56-57°C from isopropyl ether/hexane). H-NMR (d₆-DMSO) 6 1.4 (s, 9H), 2.68 (d, 2H, J=6 Hz), 3.82 (d, 2H, J=5 Hz), 4.01 (m, 1H), 5.16 (s, 2H), 5.21 (bs, 1H), 7.37 (bs, 5H).

Example B

Preparation f benzyl-3-amino-4-(anthranilate)-(3S)-butyrate.

5

10

Benzyl-3-N-t-Boc-amino-4-hydroxy-(3S)-butyrate from Example A (10 g, 32 mmol) was dissolved in dimethylformamide (50 ml) followed by triethylamine (4.4 g, 46 mmol). Isatoic anhydride (5.0 g, 3 mmol) was added and the solution was stirred for 24 hours at 15 25°C. After the reaction (monitored by RPHPLC) was complete, water was added and the product extracted with ethyl acetate (100 mL) and dried over Na2SO4. Upon evaporation of solvent 12 g of a yellow oil was obtained. To this oil, was added dioxane (20 mL) 20 followed by 4N HCl in dioxane (20 mL). The reaction was left to proceed for 4 hours, ether was added and an oily mass separated from the solution. Ether was again added to the oily mass and decanted. This procedure was repeated two times. Ether was added to the semi 25 solid and stirred vigorously for 16 hours. A white solid was obtained having MS and NMR consistent with the proposed structure.

Example BB

Preparati n of 3-nitr benzoyl glycine:

5

ï

10

Glycine (20 g, 266 mmol) was added to water (200 mL), followed by potassium hydroxide (20 g, 357 mmol) and cooled to 0°C in an ice bath. To this solution was added 3-nitrobenzoyl chloride (20 g, 108 mmol) in acetonitrile (20 mL) drop-wise over a 10 minute period. After the reaction was complete (3-4 hours) concentrated hydrochloric acid was added until pH = 2 followed by saturated aqueous NaCl (75 mL). The product was filtered, washed with water and air dried (22 g, 90% yield). H-NMR (d₆-DMSO) &, 3.92 (d, 2H, J = 6.1), 7.9 (t, 1H, J = 7.9), 8.3 (t, 1H, J = 5.6), 8.35 (m, 2H), 8.69 (s, 1H), 9.25 (t, 1H, J = 7.2 Hz). MS (FAB) m/e 231.0 (M+Li+).

Example C

Preparation f N-[2-[[(3-nitrophenyl)carbonyl]amin]-1- \times ethyl]- β -alanin , ethyl ester

5

10

N,N'-Disuccinimidyl carbonate (14 g, 5.5 mmol) was added to 3-nitrobenzoyl glycine (10 g, 4.5 mmol) of Example BB in dry dimethylformamide (30 mL) followed by N,N-dimethylaminopyridine (200 mg). After a period of 1 hour beta-alanine ethyl ester hydrochloride (7 g, 4.6 mmol) in 20% aqueous potassium carbonate (50 mL) was added in one portion. After complete reaction the product was collected by filtration (14 g, 97% yield).

20 H-NMR (d₆-DMSO) δ, 1.18 (t, 3H, J = 7.2 Hz), 2.46 (t, 2H, J = 7.0), 3.34 (q, 2H, J₁ = 6.7 Hz, J₂ = 12.6 Hz), 3.87 (d, 2H, J = 5.9 Hz), 4.05 (q, 2H, J₁ = 7.4 Hz, J₂ = 14.2 Hz), 7.8 (t, 1H, J = 8.0 Hz), 8.1 (t, 1H, J = 5.6 Hz), 8.35 (m, 2H), 8.71 (s, 1H), 9.22 (bs, 1H).

Example D

Preparation of methyl 3-[[(cyan imin)(methylthio)-methyl]amin]benzoate

5

ï

10

15

20

A stirred mixture of 3-aminomethylbenzoate (6.04 g, 40 mM) and dimethyl N-cyanodithioiminocarbonate (11.96 g, 80 mM) in pyridine (70 ml) was heated at reflux under a nitrogen atmosphere for 2.5 hours. The reaction mixture was cooled to room temperature. On standing overnight at room temperature the title compound crystallized from the reaction mixture affording 6.2 g (two crops). The title compound was used without further purification in the proceeding examples.

NMR was consistent with the proposed structure.

Example E

Pr parati n of methyl 3-[[(cyanoimin)[(phenylmethyl)-amino]methyl]amino]benzoate

5

10

A stirred mixture of the compound from Example D

(1.0 g) and benzylamine (440 mg) in ethanol (15 ml) was
heated at reflux under a nitrogen atmosphere for 3
hours. The reaction mixture was cooled to room
temperature. On standing overnight at room temperature
a white solid was obtained and isolated by filtration

(720 mg). The crude filtrate was further purified by
chromatography on silica (eluant; ethyl acetate/hexane,
1:1) to afford the title compound (550 mg) as a white
solid.

NMR was consistent with the proposed structure.

- 93 -

Example F

Preparation f methyl 3-[[(cyan imino)(methylamino)-methyl]amin]benzoate

5

10

The title compound was prepared as described in Example E, replacing benzylamine with an equivalent amount of methylamine. The title compound was obtained as a white solid (55% yield).

NMR was consistent with the proposed structure.

Example G

Preparation of m thyl 3-[[amino(cyan imino)methyl]-amino]benzoate

5

A mixture of the compound from Example D (1.0 g) and ammonium hydroxide (2 ml) in ethanol (20 ml) was heated at 70° in a sealed tube for 3.5 hours. The reaction mixture was cooled to room temperature and reduced to half its volume. After standing overnight at room temperature a white solid was obtained, which was isolated by filtration and washed with methanol. This afforded the title compound (389 mg) as a white solid.

NMR was consistent with the proposed structure.

Example H

Preparation f methyl 3-[[(cyan imino)(ethylamino)-methyl]amino]benz ate

5

10

The reaction was carried out as described in Example G except ammonium hydroxide was replaced with an equivalent amount of ethyl amine. This afforded the title compound (78%) as a white solid.

Example I

Preparation of 3-[[(cyan imino)(phenylmethyl)amino]-methyl]amino]benzoic acid

5

10

15

20

To a stirred solution of the compound from Example E (250 mg) in THF (2 ml) and MeOH (2 ml), 1N-NaOH (2 ml) was added. The reaction mixture was stirred at room temperature for 2 hours and concentrated in vacuo to afford a white solid. The residue was acidified by suspension in water followed by addition of 1N-HCl. The resultant solid was filtered, washed with diethyl ether and dried to afford the title compound (140 mg) which was used in subsequent examples without further purification.

Example J

Preparati n f 3-[[(cyan imino)(methylamin)methyl]-amin]benzoic acid

- The title compound was prepared as described in Example I except the compound of Example E was replaced with an equivalent amount of the compound of Example F. This afforded the title compound (87%) as a white solid.
- 15 MMR was consistent with the proposed structure.

Example K

Preparation f 3-[[amino(cyan imino)methyl]amin]benz ic acid

5

The title compound was prepared as described in Example I except that the compound of Example E was replaced with an equivalent amount of the compound of Example G. This afforded the title compound (92%) as a white solid.

5

15

Example L

Preparation f 3-[[(cyan imino)(ethylamin)methyl]-amino]benzoic acid

NC NH CO₂H

Et NH

The title compound was prepared as described in Example I except that the compound of Example E was replaced with an equivalent amount of the compound of Example H. This afforded the title compound (81%) as a white solid.

Example M

Preparation of m-guanidinohippuric acid HCl

Step A

5

A solution of glycine (200 g) and KOH (200 g) in water (1000 ml) at 0°C was treated dropwise with a solution of m-nitrobenzoyl chloride (100 g) in acetonitrile (100 ml). The reaction was allowed to warm to room temperature and was stirred for 4 hours.

12N aqueous HCl was added until pH <2. The reaction was allowed to stand overnight at room temperature. The resulting solid was filtered and washed with water (2 x 250 ml) and dried in vacuo at 60°C. 100 g of m-nitrohippuric acid was isolated. MS, H-NMR and CHN analysis were consistent with the desired product.

Step B

A suspension of m-nitrohippuric acid (50 g) and 5% Pd/C (5 g) in methanol (200 ml) was subjected to 50 psi of H₂. After 2 hours, the reaction was filtered. The resulting gray solid was washed with 2% aqueous HCl (2 x 250 ml). The yellowish solution was lyophilized to give m-aminohippuric acid HCl (30 g).

30 Step C

35

A mixture of m-aminohippuric acid HCl (10 g), NMM (12 ml) and 1H-pyrazole-1-carboxamidine HCl (8.3 g) in dioxane (80 ml) and water (20 ml) was refluxed for 6 hours. The heat was removed and the reaction cooled to room temperature. Saturated aqueous NaCl (10 ml) was added and the reaction mixture was filtered. The resulting solid was washed with dioxane (20 ml)

f llowed by aceton (20 ml). The salm n color solid was diss lved in 1:1 CH₃CN:H₂O and treated with 20% aqu ous HCl (pH <3). The ly philized s lid, m-guanidinohippuric acid HCl (10 g), had MS, ¹H-NMR and CHN analysis that were consistent with the desired product.

- 102 -

Example N

Preparation f m thyl 3-[[(cyanoimino)[(2-pyridinylmethyl)amino]methyl]amino]benzoate

5

10

15

The title compound was prepared following the procedure described in Example E, replacing benzyl amine with an equivalent amount of 2-(aminomethyl)-pyridine. The title compound was obtained as a white solid (75% yield).

- 103 -

Example 0

Preparati n f 3-[[(cyanoimino)[(2-pyridinylmethyl)-amino]methyl]amin]benz ic acid

5

10

15

The title compound was prepared following the procedure described in Example I except that the compound of Example E was replaced with an equivalent amount of the compound of Example N. This afforded the title compound as a white solid (70% yield).

Example P

Preparation of methyl 3-[[(cyanoimino)[(3-pyridinylmethyl)amino]methyl]amin]benzoate

5

10

The title compound was prepared following the

procedure described in Example E, replacing benzyl
amine with an equivalent amount of 3-(aminomethyl)pyridine. The title compound was obtained as a white
solid (70% yield).

- 105 -

Example O

Preparation of 3-[[(cyan imin)[(3-pyridinylmethyl)-amino]methyl]amino]benzoic acid

5

10

The title compound was prepared following the procedure described in Example I except that the compound of Example E was replaced with an equivalent amount of the compound of Example P. This afforded the title compound as a white solid (65% yield).

20

- 106 -

EXAMPLE R

Pr parati n of

5

10

15

20

To a stirred solution of DL-3-amino-3-phenyl propionic acid (16.5 g, 0.1 M), dioxane (160 ml), water (40 ml), and triethylamine (25 ml) were added di-tert-butyl dicarbonate (18.6 g, 0.1 mole). The reaction mixture was stirred at room temperature for 16 hours. The reaction mixture was concentrated in vacuo to afford an oily gum which was dissolved in ethyl acetate. The resulting solution was washed with water, saturated NaCl and water. The organic layer was separated, dried (Na₂SO₄) and evaporated to afford the crude product (8.9 g), which was taken up in the next step (Example S) without further purification.

NMR was consistent with the proposed structure.

- 107 -

EXAMPLE S

Pr paration of

5

10

15

20

To a stirred solution of the compound from Example R (8.3 g, 30 mmole) in DMF (50 ml), K_2CO_3 (10 g) and benzyl bromide (5.7 g, 30 mmole) were added. The reaction mixture was stirred under a nitrogen atmosphere at room temperature for 16 hours. The reaction mixture was diluted with water (400 ml) and extracted with ethyl acetate. The organic layer was separated and washed with water, 5% NaHCO₃, water, dried (Na₂SO₄) and concentrated in vacuo to yield the crude ester (8.5 g). The title compound was used in the next step (Example T) without further purification.

NMR was consistent with the proposed structure.

- 108 -

EXAMPLE T

Preparation of

5

10

15

To a stirred solution of the compound from Example S (2.0 g) in methylene chloride (20 ml), trifluoroacetic acid (20 ml) was added and the reaction mixture was stirred at room temperature for 16 hours. The reaction mixture was concentrated in vacuo to afford 2.05 g of crude product, which was taken up in the next step (Example U) without further purification. NMR was consistent with the proposed structure.

EXAMPLE U

Preparation of

5

10

15

20

A stirred solution of N-t-Boc-Glycine (876 mg, 5 mmole), methylene chloride (20 ml), N-methylmorpholine (1.01 g) at 0°C, IBCF (690 mg) was added and the reaction mixture was stirred at 0°C for 15 minutes. The product of Example T (1.845 g) was added to the reaction mixture at 0°C. The reaction mixture was warmed to room temperature and was stirred for a further 6 hours. The mixture was washed with water, followed by saturated sodium bicarbonate solution and water, dried (Na₂SO₄), and concentrated in vacuo to afford crude product (2.2 g). The crude product was purified through a flash column using 92.5:7:0.5/CHCl₃:ethanol:NH₄OH as eluent to give the title compound (1.82 g) as an oil.

NMR spectrum was consistent with the proposed structure.

- 110 -

EXAMPLE V

Preparation f

5

10

15

To a stirred solution of the product of Example U (1.8 g) and methylene chloride (20 ml) was added trifluoroacetic acid (12 ml), and the reaction mixture was stirred at room temperature for 16 hours. The mixture was concentrated in vacuo to afford crude product (1.7 g) as an oily gum, which was used in the next step (Example 132, Example 133, Example 134) without further purification.

NMR was consistent with the proposed structure.

10

15

20

25

30

35

Example 1

Preparation $f(\pm)$ ethyl β -[[2-[[[3-[(amin iminomethyl)-amino]phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoate, bis(trifluoroacetate) salt

Step A

To 3-pyridine carboxaldehyde (300 ml) in 2-propanol (3 liters) was added ammonium acetate (297 g) followed by malonic acid (398 g). The reaction mixture was stirred at reflux for 5 hours. The precipitate was filtered while hot and washed with hot isopropanol (2 liters). The resulting white solid was then dried to yield DL-3-amino-3-(3-pyridyl)propionic acid (220 g) as a white solid.

NMR and MS were consistent with the desired product.

Step B

DL-3-amino-3-(3-pyridyl) propionic acid (220 g) from Step A was slurried in absolute EtOH (3.6 liters). HCl gas (one lecture bottle - ½ lb) was bubbled into the reaction while stirring over 40 minutes (slow exotherm to 61°C). The slurry was then heated at reflux for 4 hours (a solution forms after 1 to 1.5 hours). The reaction mixture was cooled to 5°C in an ice bath. After stirring at 5°C for 1.5 hours, the resulting white precipitate was filtered and washed thoroughly with ether. After drying under vacuum at 50°C, the yield of ethyl DL-3-amino-3-(3-

pyridyl)propionate dihydrochl ride was 331.3 g as a white solid.

NMR and MS were consistent with the desired product.

5

Step C

To ethyl DL-3-amino-3-(3-pyridyl)propionate dihydrochloride (220.6 g, 0.83 mole) from Step B in anhydrous THF (2 liters) and triethylamine (167.2 g, 10 1.65 moles), N-t-BOC-glycine N-hydroxysuccinimide ester (225 g, 0.826 moles) (Sigma) was added in several portions at 5-10°C (no exotherm). The reaction mixture was stirred overnight at room temperature. The resulting precipitate was filtered and washed with THF. The solvent from the filtrate was then removed under 15 vacuum. The residue was taken up in ethyl acetate (2.3 liters). The ethyl acetate layer was washed with saturated sodium bicarbonate (2 x 900 ml) and H_2O (3 x 900 ml), dried over MgSO, and removed under vacuum. The residue was slurried overnight in 10% ethyl 20 acetate/hexane (2.5 liters). The precipitate was filtered, washed with 10% ethyl acetate/hexane (1 liter), then hexane, then dried to yield ethyl β -[[2-[[(1,1-dimethylethoxy)carbonyl]amino]acetyl]amino]-25 pyridine-3-propanoate (233 g) as a white solid. NMR and MS were consistent with the desired structure.

Step D

30 Ethyl β-[[2-[[(1,1-dimethylethoxy)carbonyl]amino]acetyl]amino]pyridine-3-propanoate (from Step C) (232
g, 0.66 mole) was dissolved in warm dioxane (1 liter).
After cooling to room temperature, 4M HCl in dioxane
(1.6 liters) (Aldrich) was slowly added. A white

35 precipitate formed after several minutes and then
turned to a thick goo. After 2 hours, the solvent was
decanted off. The goo was slurried in ether and the

ether decanted off until a white s lid resulted. This was dried under vacuum to yield ethyl β -[(2-aminoacetyl)amino]pyridine-3-propanoate, bis hydrochloride salt (224.2 g) as a white hygroscopic solid.

NMR and MS were consistent with the desired structure.

Step E

10 To 3,5-dimethylpyrazole-1-carboxamidine nitrate (6 g, 0.03 mole) (Aldrich) and diisopropylamine (3.8 g, 0.03 mole) in dioxane (20 ml) and H_2O (10 ml) was added 3-aminobenzoic acid (2.7 g, 0.02 mole). The reaction was stirred at reflux for 2.5 hours then overnight at room temperature. The resulting precipitate was 15 filtered, washed with dioxane/H,O and dried. precipitate was then slurried in H2O and acidified with concentrated HCl until a solution formed. The solvent was removed under vacuum and the residue was slurried 20 twice in ether (ether decanted off). The product was dried under vacuum to yield 3-guanidinobenzoic acid hydrochloride (1.77 g) as a white solid. MS and NMR were consistent with the desired structure.

25 Step F

30

35

To the product from Step E (0.49 g, 0.0023 mole) and N-methylmorpholine (0.23 g, 0.0023 mole) in anhydrous DMF (8 ml) was added isobutylchloroformate (0.31 g, 0.0023 mole) at ice bath temperature. After stirring for 5 minutes at ice bath temperature, a slurry of the product from Step D (0.73 g, 0.0023 mole) and N-methylmorpholine (0.46 g, 0.0045 mole) in anhydrous DMF (8 ml) was added in one portion. The reaction mixture was stirred overnight at room temperature. The solvent was removed under vacuum on a 78°C water bath and the product was isolated by RPHPLC t yield (\pm)ethyl β -[[2-[[[3-[(aminoiminomethyl)-

amin]phenyl]carbonyl]amino]acetyl]amino]pyridine-3pr panoate, bis(triflu roacetat) salt (800 mg) as a
hygroscopic white s lid. MS and NMR were c nsistent
with th desired structure.

:

Preparation of $(\pm)\beta$ -[[2-[[[3-[(aminoiminomethyl)amino]-phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoic acid, bis(trifluoroacetate) salt

15

20

25

10

To the product from Example 1 (700 mg, 0.001 mole), in H₂O (20 ml) was added LiOH (160 mg, 0.0038 mole). The reaction mixture was stirred for 1 hour at room temperature. After lowering the pH to \approx 5 with TFA, the product was isolated by RPHPLC to yield $(\pm)\beta$ -[[2-[[[3-[(aminoiminomethyl)amino]-phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoic acid, bis(trifluoroacetate) salt (640 mg) as a white solid. MS and NMR were consistent with the desired structure.

10

Example 3

Preparati n of (±)ethyl β -[[2-[[[3-[(amin imin methyl)-amino]phenyl]carbonyl]amino]acetyl]amin]-benzenepropanoate, trifluoroacetate salt

The above compound was prepared according to the methodology of Example 1, substituting an equivalent amount of benzaldehyde for 3-pyridinecarboxaldehyde in Step A.

NMR and MS were consistent with the desired 20 structure.

10

Example 4

Preparation $f(\pm)\beta-[[2-[[[3-[(aminoiminomethyl)-amin]phenyl]carbonyl]amino]acetyl]amino]benzene-propanoic acid, trifluoroacetate salt$

To the product of Example 3 (0.37 g, 0.0007 mole) in H₂O (10 ml) was added LiOH (80 mg, 0.002 mole). The reaction mixture was stirred at room temperature for 1 hour. The pH was lowered to =3 with TFA and the product was isolated by RPHPLC to yield β-[[2-[[[3-20 ([aminoiminomethyl)amino]phenyl]carbonyl]-amino]acetyl]amino]benzenepropanoic acid, trifluoroacetate salt (280 mg) as a white solid. MS and NMR were consistent with the desired structure.

Example 5

Preparation of (±)ethyl β -[[2-[[[3-[(aminoiminomethyl)-amino]phenyl]carbonyl]amino]acetyl]amino]-1,3-benzodioxole-5-propanoate, trifluoroacetate salt

The above compound was prepared according to the methodology of Example 1, substituting the equivalent amount of piperonal (Aldrich) for 3-pyridinecarbox-aldehyde in Step A.

MS and NMR were consistent with the desired 20 structure.

10

Example 6

Preparation $f(\pm)\beta-[[2-[[[3-[(aminoimin methyl)amino]-phenyl]carbonyl]amin]acetyl]amino]-1,3-benzodioxole-5-propanoic acid, trifluoroacetate salt$

To the product of Example 5 (0.35 g, 0.0006 mole)

in H₂O (40 ml) and CH₃CN (5 ml) was added LiOH (70 mg,
0.0017 mole). The reaction mixture was stirred at room
temperature for 1 hour. The pH was lowered to ~4.5
with TFA and the product was isolated by RPHPLC to
yield (±)β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]-1,3benzodioxole-5-propanoic acid, trifluoroacetate salt
(280 mg) as a white solid. MS and NMR were consistent

with the desired structure.

Preparation of (±)ethyl β -[[2-[[[3-[(amin imin methyl)-amin]naphthalen-1-yl]carbonyl]amino]acetyl]amino]-pyridine-3-propanoate, bis(trifluoroacetate)salt

(RACEMIC)

15

20

25

30

10

5

Step A

To methyl 3-nitro-1-naphthoate (2.5 g, 0.011 mole) (Aldrich) in MeOH/ H_2O (40 ml)(1:1) was added LiOH (1.8 g, 4 equivalents). The solution was stirred overnight at room temperature. The solvent was removed under a stream of N_2 . The residue was dissolved in H_2O and the solution acidified with concentrated HCl. The resulting precipitate was filtered, washed with H_2O and dried to yield 3-nitro-1-naphthoic acid (2.18 g) as a white solid.

Step B

3-Nitro-1-naphthoic acid (1.77 g, 0.008 mole) was dissolved in a minimum of warm MeOH. 10% Pd/C (300 mg) was added and the reaction shaken on a Parr shaker under 50 psi H₂ for 5 hours. The catalyst was filtered through celite and the solvent was removed under vacuum. The residue was dried to yield 3-amino-1-naphthoic acid (1.43 g) as a pink colored solid.

35

Step C

T 3,5-dimethylpyrazole-1-carboxamidine nitrate (1.6 g, 0.008 mole) (Aldrich) and diisopropylethylamine (1.02 g, 0.008 mole) in dioxane (5 ml) and H₂O (2.5 ml) was added 3-amino-1-naphthoic acid (1 g, 0.0053 mole). The reaction mixture was stirred at reflux overnight. The reaction was cooled to room temperature and the precipitate was filtered, washed with dioxane/H₂O then dried. The precipitate was then slurried in H₂O and acidified with concentrated HCl. The solvent was removed under vacuum on a 70°C water bath. The residue was slurried in ether 3 x (ether decanted off), then dried under vacuum to yield 3-guanidino-1-naphthoic acid hydrochloride (460 mg) as a white solid.

15

10

5

Step D

To 3-guanidino-1-naphthoic acid hydrochloride (400 mg, 0.0015 mole) and N-methylmorpholine (150 mg) in anhydrous DMF (8 ml) was added isobutylchloroformate (210 mg) at ice bath temperature. After stirring at 20 ice bath temperature for 5 minutes, a slurry of the product from Example 1, Step D (490 mg, 0.0015 mole), N-methylmorpholine (300 mg) and anhydrous DMF (6 ml) was added in one portion. The reaction mixture was stirred overnight at room temperature. The solvent was 25 removed under vacuum on a 78°C water bath. The product was isolated by RPHPLC to yield (±)ethyl β -[[2-[[[1-[(aminoiminomethyl)amino]naphthalen-3-yl]carbonyl]amino]acetyl]amino]pyridine-3-propanoate, bis(trifluoroacetate)salt (410 mg) as a white solid.

30 bis(trifluoroacetate)salt (410 mg) as a white solid NMR and MS were consistent with the desired structure.

10

Example 8

Preparation of $(\pm)\beta$ -[[2-[[[3-[(aminoiminomethyl)-amin]naphthalen-1-yl]carbonyl]amino]acetyl]amino]-pyridine-3-propanoic acid, bis(trifluoroacetate) salt

(RACEMIC)

To the product of Example 7, Step D (280 mg, 0.0004 mole) in H₂O (15 ml) and CH₃CN (2 ml) was added (70 mg, 0.0016 mole) LiOH. The reaction mixture was stirred at room temperature for 1 hour. The pH was lowered to 5 with TFA and the product was isolated by RPHPLC to yield (±)β-[[2-[[[1-[(aminoiminomethyl)-amino]naphthalen-3-yl]carbonyl]amino]acetyl]-amino]pyridine-3-propanoic acid, bis(trifluoroacetate) salt (240 mg) as a hygroscopic white solid. MS and NMR were consistent with the desired structure.

10

Example 9

Preparation of (±)ethyl β -[[2-[[[3-[(4,5-dihydro-1H-imidazol-2-yl)amin]phenyl]carb nyl]amino]acetyl]-amino]pyridine-3-propanoate, bis(trifluoroacetate) salt

Step A

To 2-methylthio-2-imidazoline hydroiodide (14.6 g, 0.06 mole) (Aldrich) and diisopropylethylamine (7.6 g, 0.06 mole) in dioxane (40 ml) and H₂O (20 ml) was added 3-aminobenzoic acid (5.4 g, 0.04 mole). The reaction was stirred overnight at reflux. The solution was cooled in an ice bath and the resulting precipitate was filtered and washed with dioxane. The crude product was purified by RPHPLC to yield 3-(2-aminoimidazoline)-benzoic acid (800 mg).

Step B

To the product from Step A (400 mg, 0.00125 mole) 25 and N-methylmorpholine (130 mg, 0.00125 mole) in anhydrous DMF (8 ml) was added isobutylchloroformate (170 mg, 0.00125 mole). After stirring at ice bath temperature for 5 minutes, the product from Example 1, Step D (410 mg, 0.00125 mole) and N-methylmorpholine 30 (250 mg, 0.0025 mole) in anhydrous DMF (6 ml) was added in one portion. The reaction mixture was stirred overnight at room temperature. The solvent was removed under vacuum on a 79°C water bath and the product was isolated by RPHPLC to yield (±)ethyl β -[[2-[[[3-[(4,5-35 dihydro-1H-imidazol-2-yl)amino]phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propan ate,

bis(triflu roacetate) salt (600 mg) as a hygroscopic white solid. MS and NMR wer consistent with the desired structure.

10

Example 10

Preparation $f(\pm)\beta-[[2-[[[3-[(4,5-dihydr-1H-imidazol-2-yl)amino]phenyl]carbonyl]amin]acetyl]amin]pyridine-3-propanoic acid, bis(trifluoroacetate) salt$

To the product of Example 9, Step B (450 mg, 0.00068 mole) in H₂O (20 ml) was added LiOH (110 mg, 0.0027 mole). The reaction mixture was stirred at room temperature for 1 hour. The pH was lowered to 5 with TFA and the product was isolated by RPHPLC to yield (±)β-[[2-[[[3-[(4,5-dihydro-1H-imidazol-2-yl)amino]phenyl]carbonyl]amino]acetyl]amino]-pyridine-3-propanoic acid, bis(trifluoroacetate) salt (250 mg) as a hygroscopic white solid. MS and NMR were consistent with the desired structure.

Preparati n of (\pm) ethyl β -[[2-[[[3-[(3,4,5,6-tetrahydr -2H-azepin-7-yl)amin]phenyl]carbonyl]-amino]acetyl]amino]pyridine-3-propanoate, bis(trifluoroacetate) salt

15 Step A

To 1-aza-2-methoxy-1-cycloheptene (3.67 g, 0.0288 mole) (Aldrich) in absolute ethanol (20 ml) was added 3-aminobenzoic acid hydrochloride (5 g, 0.0288 mole). A solution quickly formed. The reaction mixture was stirred overnight at room temperature. The resulting precipitate was filtered, washed with ether and dried under vacuum to yield 3-(1-aza-2-amino-1-cycloheptene)-benzoic acid (4.9 g).

25 Step B

20

30

35

To the product from Step A (0.5 g, 0.0019 mole) and N-methylmorpholine (0.19 g, 0.0019 mole) in anhydrous DMF (8 ml) was added isobutylchloroformate (0.25 g, 0.0019 mole) at ice bath temperature. After stirring at ice bath temperature for 5 minutes, a slurry of the product from Example 1, Step D (0.6 g, 0.0019 mole) and N-methylmorpholine (0.38 g, 0.0037 mole) in anhydrous DMF (7 ml) was added in one portion. The reaction mixture was stirred overnight at room temperature. The solvent was removed under vacuum on a 78°C water bath and the product was isolated by RPHPLC

to yield the title compound (490 mg). NMR and MS were consistent with the desired structure.

10

Example 12

Preparation $f(\pm) \beta-[[2-[[[3-[(3,4,5,6-tetrahydro-2H-azepin-7-yl)amino]phenyl]carbonyl]amino]acetyl]amino]-pyridine-3-propanoic acid, bis(trifluoroacetate) salt$

To the product of Example 11, Step B (400 mg, 0.00058 mole) in H₂O (20 ml) was added LiOH (80 mg, 0.0019 mole). The reaction mixture was stirred at room temperature for 1 hour. The pH was lowered to 4.5 with TFA and the product was isolated by RPHPLC to yield 320 mg of (±) β-[[2-[[[3-[(3,4,5,6-tetrahydro-2H-azepin-7-yl)amino]phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoic acid, bis(trifluoroacetate) salt as a white solid. MS and NMR are consistent with the desired structure.

10

Exampl 13

Preparation of (±)ethyl β -[[2-[[[3-[(3,4,5,6-t trahydr -2H-azepin-7-yl)amino]phenyl]carbonyl]amino]-acetyl]amino]-1,3-benzodioxole-5-propanoate, TPA salt

The above compound was prepared according to the

methodology of Example 11, substituting the equivalent
amount of piperonal (Aldrich) for 3-pyridinecarboxaldehyde in Example 1, Step A, in Example 11,
Step B.

MS and NMR were consistent with the desired 20 structure.

Pr paration of (±) β -[[2-[[[3-[(3,4,5,6-tetrahydro-2H-az pin-7-yl)amin]phenyl]carbonyl]amino]acetyl]amino]-1,3-benzodioxole-5-propanoic acid, TFA salt

20

25

10

5

To the product of Example 13 (0.46 g, 0.00091 mole) in H_2O (10 ml) and dioxane (7.5 ml) was added LiOH (80 mg, 0.0018 mole). The reaction was stirred at room temperature for 2 hours. The pH was lowered to 5 with TFA and the product was isolated by RPHPLC to yield (\pm) β -[[2-[[[3-[(3,4,5,6-tetrahydro-2H-azepin-7-yl)amino]phenyl]carbonyl]amino]acetyl]amino]-1,3-benzodioxole-5-propanoic acid (440 mg) as a white solid. MS and NMR were consistent with the desired structure.

10

15

Example 15

Preparation $f(\pm)\beta-[[2-[[[3-[(3,4,5,6-tetrahydr-2H-azepin-7-yl)amino]phenyl]carbonyl]amino]acetyl]amino]-benzenepropanoic acid, trifluoroacetate salt$

The above compound was prepared according to the methodology of Example 12, substituting the equivalent amount of benzaldehyde for 3-pyridinecarboxaldehyde in Example 1, Step A, and further used in Example 1, Step D as described in Example 11, Step B.

MS and NMR were consistent with the desired structure.

Pr paration f (±) ethyl β-[[2-[[[3-[(3,4-dihydro-2Hpyrrol-5-yl)amin]phenyl]carbonyl]amino]acetyl]amino]5 pyridine-3-propanoate, bis(trifluoroacetate) salt

15

20

The above compound was prepared according to the methodology of Example 11, substituting 1-aza-2-methoxy-1-cyclopentene* for 1-aza-2-methoxy-1-cycloheptene in Step A. MS and NMR were consistent with the desired structure.

tetrafluoroborate (10 g) (Aldrich). The reaction was stirred at room temperature for 2 days.

Saturated NaHCO, was added and after shaking in a separatory funnel, the CH₂Cl₂ was separated and distilled off. 1 g of desired product was isolated by further distillation at atmospheric pressure collecting the portion boiling at ≈120°C.

Preparati n of β -[[2-[[[3-[(3,4-dihydr -2H-pyrrol-5-yl)amino]phenyl]carbonyl]amin]acetyl]amino]pyridine-3-propanoic acid, bis(trifluoroacetate) salt

15

20

10

5

To the product of Example 16 (380 mg, 0.00057 mole) in $\rm H_{2}O$ (15 ml) was added LiOH (100 mg, 0.002 mole). The reaction was stirred at room temperature for 2 hours. The pH was lowered to 5 with TFA and the product was isolated by RPHPLC to yield β -[[2-[[[3-[(3,4-dihydro-2H-pyrrol-5-yl)amino]phenyl]carbonyl]-amino]acetyl]amino]pyridine-3-propanoic acid, bis(trifluoroacetate) salt (150 mg) as a white solid. MS and NMR were consistent with the desired structure.

Example 18

The above compound was prepared according to the methodology of Example 1, substituting an equivalent amount of 1-(N-t-Boc-amino)cyclopropane-N-hydroxysuccinimide carboxylate (Sigma) for N-t-Boc-glycine N-hydroxysuccinimide ester in Example 1, Step C.

MS and NMR were consistent with the desired structure.

Preparation of β -[[1-[[[3-[(aminoiminomethyl)amin]-phenyl]carbonyl]amino]cycloprop-1-yl]carbonyl]amino]-pyridine-3-propanoic acid, bis(trifluoroacetate) salt

15

20

25

5

10

To the product of Example 18 (220 mg, 0.00033 mole) in H_2O (15 ml) was added LiOH (60 mg, 0.0013 mole). The reaction was stirred at room temperature for 1.5 hours. The pH was lowered to 3 with TFA and the product was isolated by RPHPLC to yield β -[[1-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]-cycloprop-1-yl]carbonyl]amino]pyridine-3-propanoic acid, bis(trifluoroacetate) salt (170 mg) as a white solid. MS and NMR were consistent with the desired structure.

Preparation of (±)ethyl β -[[2-[[[4-chloro-3-[(3,4,5,6-tetrahydr -2H-azepin-7-yl)amino]phenyl]carbonyl]amino]-acetyl]amino]pyridine-3-propanoate, bis TFA salt

(RACEMIC)

15

20

10

5

The above compound was prepared according to the methodology of Example 11, substituting an equivalent amount of 3-amino-4-chloro-benzoic acid hydrochloride (Aldrich) for 3-amino-benzoic acid hydrochloride in Example 11, Step A. MS and NMR were consistent with the desired structure.

Preparation of (±) β-[[2-[[[4-chloro-3-[(3,4,5,6-tetrahydro-2H-azepin-7-yl)amino]phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoic acid, bis TFA Salt

35

Example 23

Preparation of (\pm) ethyl β -[[2-[[[3-[[imino-[(phenylmethyl)amino]methyl]amino]phenyl]carbonyl]-amino]acetyl]amino]pyridine-3-propanoate, bis(trifluoroacetate) salt

Step A

1-(3-Carboxyphenyl)-2-thiourea (5 g, 0.025 mole) (Trans World Chemicals) in THF (75 ml) and CH₃I (3.62 g, 0.025 mole) were stirred at reflux for 2 hours. The solvent was removed under vacuum and the residue was slurried in ether (3X), (the ether decanted off each time) to yield, after drying under vacuum, N-(3-carboxyphenyl)-S-methylisothiouronium hydroiodide (7.8 g) as a yellow solid.

Step B

To the product of Step A (1.5 g, 0.0044 mole) and diisopropylethylamine (0.57 g, 0.0044 mole) in $\rm H_2O$ (5 ml) and dioxane (5 ml) was added benzylamine (0.48 g, 0.0044 mole). The reaction mixture was heated at reflux for 6 hours. The reaction was cooled to room temperature and a precipitate formed. Dioxane (6 ml) was added and the slurry was stirred overnight at room temperature. The precipitate was filtered, washed with dioxane/ $\rm H_2O$, dried, slurried in $\rm H_2O$, and acidified with concentrated HCl. The s lvent was removed under vacuum

and the residue was slurried in ether (3X; ether d canted ff each time). After drying, 1-(3-carboxyphenyl)-2-benzylguanidine hydrochl ride (800 mg) was is lated as a white solid. MS and NMR were consistent with the desired structure.

Step C

5

10

The title compound was prepared according to Example 1, Step F, substituting an equivalent amount of the product from Step B above for the product from Example 1, Step E in Step F. MS and NMR were consistent with the desired structure.

Example 24

Preparati n of (±) β -[[2-[[[3-[[imino[(phenylmethyl)-amin]methyl]amino]phenyl]carbonyl]amino]acetyl]amino]-pyridine-3-propanoic acid, bis(trifluoroacetate) salt

To the product of Example 23, Step C (330 mg, 0.00045 mole) in H₂O (20 ml) was added LiOH (80 mg). The reaction was stirred at room temperature for 1 hour. The pH was lowered to 3 with TFA and the product was isolated by RPHPLC to yield (±) β-[[2-[[[3-[[imino[(phenylmethyl)amino]methyl]amino]phenyl]-carbonyl]amino]acetyl]amino]pyridine-3-propanoic acid, bis(trifluoroacetate) salt (330 mg) as a white solid.

25 MS and NMR were consistent with the desired structure.

10

20

25

30

35

Example 25

Preparation of (±) ethyl β -[[2-[[[3-[(imin phenylmethyl)amino]phenyl]carbonyl]amino]acetyl] amino]pyridine-3-propanoate, bis(trifluoroacetate) salt

15 Step A

To ethyl benzimidate hydrochloride (3 g, 0.016 mole) (Fluka) and (2.1 g, 0.016 mole) diisopropylethylamine in H₂O (15 ml) and dioxane (15 ml) was added 3-aminobenzoic acid (2.22 g, 0.016 mole) (Aldrich). The reaction mixture was stirred at room temperature for 4 days. The resulting precipitate was filtered, washed with dioxane/H₂O and dried. The precipitate was slurried in H₂O and acidified with concentrated HCl. The solvent was removed under vacuum and the residue was slurried in ether. The ether was decanted off and the residue dried under vacuum to yield N-(3-carboxyphenyl) benzamidine hydrochloride (700 mg) as a white solid. MS and NMR were consistent with the desired structure.

Step B

The title compound was prepared according to the methodology of Example 1, Step F, substituting an equivalent amount of the product from Step A above for the product from Example 1, Step E in Step F. MS and NMR were consistent with the desired structure.

Example 26

Preparation of (±) β -[[2-[[[3-[(imin phenylm thy1]-amino]phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoic acid, bis(trifluoroacetate) salt

15

20

10

5

To the product of Example 25, Step B (240 mg, 0.0034 mole) in $\rm H_2O$ (20 ml) was added LioH (50 mg). The reaction mixture was stirred at room temperature for 35 minutes. The pH was lowered to 3 with TFA and the product was isolated by RPHPLC to yield (\pm) β -[[2-[[[3-[(iminophenylmethyl]amino]phenyl]carbonyl]amino]acetyl] amino]pyridine-3-propanoic acid, bis(trifluoroacetate) salt (120 mg) as a white solid. MS and NMR were consistent with the desired structure.

10

Example 27

Preparation $f \beta = [[2-[[[3-[(aminoiminomethyl)amin]-phenyl]carbonyl]amino]acetyl]amin]-3,5-dichlorobenzenepropanoic acid, trifluoroacetate salt$

The above compound was prepared according to the method of Example 2 substituting an equivalent amount of 3,5-dichlorobenzaldehyde (Aldrich) for 3-pyridinecarboxaldehyde in Example 1, Step A.

- 145 -

Example 30

Preparation of βS-[[2-[[[3-[(3,4,5,6-tetrahydro-2H-az pin-7-yl)amino]phenyl]carbonyl]amino]acetyl]amino]5 4-pentynoic acid, trifluoroacetate salt

The above compound was prepared according to the method of Example 12, substituting an equivalent amount of ethyl 3-S-amino-4-pentynoate hydrochloride (J. Med. Chem. 1995, 38, 3378-2394) for ethyl DL-3-amino-3-(3-pyridyl)propionate dihydrochloride in Example 1, Step C and further used in Example 1, Step D as described in Example 11, Step B.

20

25

Example 34

Preparation $f \beta S-[[2-[[[3-[[imino(1-pyrrolidiny])-methyl]amino]phenyl]carbonyl]amino]acetyl]amino]-4-pentynoic acid, trifluoroacetate salt$

The above compound was prepared according to methodology of Example 24, substituting an equivalent amount of pyrrolidine for benzylamine in Example 23, Step B and an equivalent amount of ethyl 3-S-amino-4-pentynoate hydrochloride for ethyl DL-3-amino-3-(3-pyridyl)propionate dihydrochloride in Example 1, Step C and further used in Example 1, Step D as described in Example 23, Step C.

- 147 -

20

25

30

35

Preparation of ethyl (±) β -[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]-amino]-3,5-bis(trifluoromethyl)benzenepropanoate.

The above compound was prepared according to the methodology of Example 1, substituting the equivalent amount of 3,5-bis-trifluoromethylbenzaldehyde (Aldrich) for 3-pyridinecarboxaldehyde in Step A.

NMR and mass spectrometry were consistent with the desired structure.

Step B

To 260 mg (0.00039 mole) of the product of Step A above in H_2O (25 ml) and CH_3CN (10 ml) was added LiOH (41 mg, 0.00098 mole). The reaction was stirred at room temperature for 1 hour. The pH was lowered to 3 with TFA and the product was isolated by reverse phase prep HPLC to yield (after lyophilization) 210 mg of the title compound as a white solid.

NMR and mass spectrometry were consistent with the desired structure.

10

15

Example 37

Preparati n of (±) β -[[2-[[[3-[(aminoiminomethyl)-amin]phenyl]carbonyl]amino]acetyl]amino][1,1'-biphenyl]-4-propanoic acid, trifluoroacetate salt

The above compound was prepared according to the methodology of Example 2, substituting an equivalent amount of 4-biphenylcarboxaldehyde for 3-pyridinecarboxaldehyde in Example 1, Step A.

Example 38

Preparati n f (±) ethyl β -[[2-[[[3-[(aminoiminomethyl)amino]-5-(trifluor methyl)-phenyl]carbonyl]amino]acetyl]amino]-3,5-bis(trifluoromethyl)benzenepropanoate, trifluoroacetate salt

15

20

25

10

5

The above compound was prepared according to the methodology of Example 1, substituting the equivalent amount of 3,5-bis-trifluoromethylbenzaldehyde (Aldrich) for 3-pyridinecarboxaldehyde in Step A and substituting the equivalent amount of 3-amino-5-trifluoromethylbenzoic acid [which was synthesized by reduction of 3-nitro-5-trifluoromethylbenzoic acid (Lancaster) in ethanol with 10% Pd/C under 50 psi H₂ for 4 hours] for 3-aminobenzoic acid in Step E and stirring the resulting reaction mixture from Step E at reflux overnight instead of 2.5 hours.

NMR and mass spectrometry were consistent with the desired structure.

Example 39

Preparation $f(\pm) \beta-[[2-[[[3-[(aminoiminomethyl)-amin]-5-(trifluoromethyl)ph nyl]carbonyl]amino]-acetyl]amino]-3,5-bis(trifluoromethyl)benzenepropanoic acid, trifluoroacetate salt$

To 600 mg (0.00082 mole) of the product of Example 38 in 12 ml of H₂O and 12 ml of CH₃CN was added 140 mg (0.0033 mole) of LiOH. The reaction was stirred at room temperature for 1.5 hours. The pH was lowered to 2.5 with TFA and the product isolated by reverse phase prep HPLC to yield (after lyophilization) 520 mg of (±) β-[[2-[[[3-((aminoiminomethyl)amino]-5-(trifluoromethyl)phenyl]carbonyl]amino]acetyl]amino]-3,5-bis(trifluoromethyl)benzenepropanoic acid, trifluoroacetate salt as a white solid.

NMR and mass spectrometry were consistent with the desired structure.

Example 40

Preparation of 3S-[[2-[[[3-(amin carbonylamino)-phenyl]carbonyl]amino]acetyl]amin]-4-pentynoic acid

5

10

Step A

Ethyl 3S-amino-4-pentynoate hydrochloride was prepared using the method in <u>J. Med. Chem.</u> 1995, <u>38</u>, 3378-94.

15

20

Step B

2 g m-aminohippuric acid in 5% aqueous HCl (25 ml) was treated with urea (2 g) and the solution was refluxed for 4 hours. m-N-carbamoylaminohippuric acid was purified by HPLC (RP-CH₃CN/H₂O) and lyophilized to give 1.2 g of white solid. The MS was consistent with the desired product.

Step C

25 A suspension of \underline{m} -ureahippuric acid (1.2 g) in DMF (5 ml) and pyridine (5 ml) was treated with DSC (1.5 g). A catalytic amount of DMAP was added and the reaction mixture was stirred for 3 hours. A solution of 3S-aminopentynoic acid, hydrochloride (0.8 g) and K_2CO_3 (0.7 g) in saturated aqueous NaHCO₃ (5 ml) was 30 added to the reaction mixture. The resulting mixture was stirred overnight at room temperature. The reaction was diluted to 45 ml with 1:1 CH₃CN:H₂O and acidified with of trifluoracetic acid (5 ml). The ester was purified by HPLC (RP-CH3CN/H2O) and a white 35 solid (125 mg) was recovered after lyophilization. This material was then treated with 1:1 CH3CN:H2O (20

ml) and made basic (pH>12) with LiOH. After complete reaction, the product was purified by HPLC (RP-CH $_3$ CN/H $_2$ O) and th d sired product (60 mg) was obtained. MS, 1 H-NMR and CHN analysis were consistent with the desired product.

Example 41

Preparation of (±) β -[[2-[[[3-[(amin iminomethyl)-amin]ph nyl]carbonyl]amino]acetyl]amino]naphthalene-1-propanoic acid, trifluoroacetate salt

Step A

A mixture of freshly distilled 1napthalenecarboxaldehyde (8.6 g), ammonium acetate
(10.6 g) and malonic acid (5.7 g) in isopropyl alcohol
(50 ml) was refluxed for 4 hours. The reaction was
filtered while hot and washed with hot isopropyl
alcohol (2 x 50 ml), washed with $\rm H_{2}O$ (125 ml) and
isopropanol (100 ml) and dried in vacuo at 40°C. 4.6 g
of β S-aminonaphthalene-1-propanoic acid as a white
solid was isolated. MS and ¹H-NMR were consistent with
the desired product.

Step B

A suspension of the product of Step A (4.6 g) in methanol (100 ml) was treated with 4N HCl/dioxane (10 ml). The reaction was stirred overnight and the excess solvent was removed under reduced pressure. The oil was dissolved into 1:1 CH₃CN:H₂O and purified by HPLC (RP-CH₃CN/H₂O). Methyl β S-aminonaphthalene-1-propanoate (4.6 g) as a white solid was obtained. MS and ¹H-NMR were consistent with the desired product.

Step C

A suspension of m-guanidinohippuric acid HCl (1.4 g) in DMF (5 ml) and pyridin (5 ml) was treated with DSC (3 g) and a catalytic amount of DMAP. The reaction was stirred overnight at room temperature. The resulting solution was treated with a solution of the product of Step B (1.7 g) and NMM (0.6 ml) in DMF (2.5 ml) and pyridine (2.5 ml). The mixture was stirred overnight at room temperature. The reaction was then treated with TFA and diluted to 50 ml with 1:1 10 CH₂CN:H₂O. The solution was purified by HPLC (RP-CH₃CN/H₂O) and (\pm) methyl β S-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]naphthalene-1-propanoate (1.3 g) as a white solid was obtained after lyophilization. MS and H-NMR were 15 consistent with the desired product.

Step D

20

25

A solution of the product of Step C (0.5 g) in 1:1 CH₃CN:H₂O (15 ml) was treated with LiOH until pH > 12. The reaction was monitored by HPLC (RP-CH₃CN/H₂O) and when hydrolysis was complete, the desired material was purified by HPLC (RP-CH₃CN/H₂O). A white solid (0.3 g) was recovered after lyophilization. MS, 1 H-NMR and CHN were consistent with the desired product.

Example 42

Preparation of (±) 3-[[3-[(aminoiminomethyl)amin]-phenyl]carbonyl]amino]-2-ox pyrrolidine-1-propanoic acid, trifluoroacetate salt

Step A

10

A solution of N-(tert-butoxycarbonyl)-L-methionine (6.2 g) in DMF (25 ml) and pyridine (25 ml) was treated with DSC (9.6 g) and a catalytic amount of DMAP. After 15 4 hours, a solution of β -alanine ethyl ester HCl (3.8 g) and K_2CO_3 (3.5 g) in saturated aqueous NaHCO₃ (25 ml) was added. The reaction mixture was stirred overnight at room temperature. The excess solvent was removed under reduced pressure and purified by HPLC (RP-20 CH_3CN/H_2O). N-[2-[[(1,1-dimethylethoxy)carbonyl]amino]-4-(methylthio)-1-oxobutyl]- β -alanine, ethyl ester (7.0 g) as a colorless oil was obtained. was confirmed as the desired product by MS and used without further purification. 25

Step B

6.5 g of the oil from Step A was dissolved in DMF (25 ml) and treated with CH₃I (5.0 ml). After

approximately 1 hour, NaH (0.50 g) was added, followed by further addition of NaH (0.50 g). The reaction was treated with H₂O (25 ml) and EtOAc (200 ml). The organic layer was washed with additional H₂O (3 x 25 ml), saturated aqueous NaCl (1 x 25 ml) and dried over NaSO₄. The excess solvent was removed under reduced pressure to give 4 g of

as a tan semi-solid. MS was consistent with the structure and the product was used without further purification.

10

15

Step C

A solution of the product of Step B (4 g) in ethanol (50 ml) was treated with 4N HCl/dioxane (20 ml). The excess solvent was removed under reduced pressure. The crude solid was purified by HPLC $(RP-CH_2CN/H_2O)$. 20% aqueous HCl (10 ml) was added and 1 g of ethyl 3-amino-2-oxopyrrolidine-1-propanoate was obtained as a white solid after lyophilization. MS was consistent with the desired product.

20

25

30

Step D

A solution of m-guanidinobenzoic acid HCl (0.7 g) in DMF (3 ml) and pyridine (3 ml) was treated with DSC (0.8 g) and a catalytic amount of DMAP. After 3 hours a solution of the product of Step C (0.7 g) in H_2O (3 ml) with an equal molar amount of K2CO3 was added. The reaction was stirred overnight at room temperature. The desired ester was isolated by HPLC (RP-CH3CN/H2O). The white solid (100 mg) was treated with H2O (10 ml) and made basic with LiOH (pH>12). After 2 hours, the desired product was isolated by HPLC (RP-CH3CN/H2O) and lyophilized. 75 mg of (±) 3-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]-2-oxopyrrolidine-1propanoic acid, trifluoroacetate salt as a white solid 35 was obtained. MS, 1H-NMR and CHN analysis were consistent with the desired product.

Example 43

Preparation of 3R-[[2-[[[3-[(aminoiminomethyl)amino]-phenyl]carbonyl]amin]acetyl]amino]-4-pentyn ic acid, hydrochloride salt

Step A

10

Ethyl 3-(N-(tert-butoxycarbonyl)amino)pent-4-ynoic

ester (3 g) [J. Med. Chem., 1995, 38, 3378-94] in CH₂Cl₂

(60 ml) at 0°C was treated with TFA (30 ml). The
reaction was stirred for 3 hours. The excess solvent
was removed under reduced pressure and a yellow oil

(3.3 g) was obtained. The oil was confirmed as the
desired product by MS.

Step B

A solution of \underline{m} -guanidinohippuric acid HCl (3.3 g) in DMF (12 ml) and pyridine (12 ml) was treated with DSC (6.1 g) and a catalytic amount of DMAP. After 3 25 hours, a solution of crude product (3.3 g) from Step A in saturated aqueous NaHCO3 (12 ml) was added. reaction was stirred overnight at room temperature. The excess solvent was removed under reduced pressure. The resulting solid was treated with TFA and 1:1 30 CH2CN: H2O. The product was isolated by HPLC (RP- $CH_2CN/H_2O)$ to yield ethyl 3R-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]propynoate trifluoroacetate salt (3 g) as a white solid. MS and 'H-NMR were consistent with the desired 35 product.

Step C

5

10

The product of Step B (3 g) was dissolved in 1:1 CH₃CN:H₂O (50 ml) and treated with LiOH (pH>12). After 4 hours the reacti n was acidified with TFA and the TFA salt of the desired product was isolated by HPLC (RP-CH₃CN/H₂O). The lyophilized solid (2.5 g) was slurried with 1:3 CH₃CN:H₂O (100 ml) and ion exchange resin, AG 2-X8 chloride form (BioRad) (50 g). The mixture was filtered and treated with 20% HCl (5 ml). The clear solution was lyophilized and the resin exchange process was repeated. The desired product (2.2 g) was obtained. MS, ¹H-NMR and CHNCl were consistent with the desired product.

Example 44

Pr parati n of 3S-[[2-[[[3-[[[(phenylmethyl)amino]-carbonyl]amino]phenyl]carbonyl]amin]acetyl]amino]-4-pentynoic acid

5

10

15

Step A

M-Aminohippuric acid HCl (20 g) in CH₃CN (100 ml) was treated with benzyl isocyanate (16 ml). The reaction was treated with 5t aqueous HCl (400 ml), filtered and washed with H₂O (50 ml) to give 21 g of M-(benzylurea) hippuric acid. The MS and ¹H-NMR were consistent with the desired product. No further purification was done.

20 Step B

Ethyl 3S-[[2-[[[3-[[[(phenylmethyl)amino]-carbonyl]amino]phenyl]carbonyl]amino]acetyl]amino]-4-pentynoate was prepared using the method in Example 40 substituting an equal molar amount of m
(benzylurea)hippuric acid for m-ureahippuric acid.

The desired ester was purified by HPLC (RP - CH₃CN/H₂O) to give 1.2 g as a white solid. The MS and H-NMR were consistent with the desired ester.

30 Step C

35

A solution of ethyl 3S-[[2-[[[3-[[[(phenylmethyl)-amino]carbonyl]amino]phenyl]carbonyl]amino]acetyl]-amino]-4-pentynoate (1.0 g) in 1:1 CH₃CN:H₂O (20 ml) was treated with KOH (pH>12). After 4 hours the reaction was acidified with TFA and purified twice by HPLC (RP-CH₃CN/H₂O). A white solid (300 mg) was obtained. MS, ¹H-NMR and CHN were c nsistent with the desired product.

Example 45

Pr paration of 3S-[[2-[[[3-[(amin iminomethyl)amino]-phenyl]carbonyl]amin]acetyl]amin]-4-pentyn ic acid, hydrochloride salt

The product of Example 58 (6 g) was dissolved in 1:1 CH₃CN:H₂O (75 ml) and treated with KOH. The pH was maintained greater than 12 by addition of KOH. After 4 15 hours the reaction was acidified with TFA and purified by HPLC (RP-CH₃CN/ H_2 O). The TFA salt (4.2 g) was obtained after the appropriate fractions were lyophilized. The solid was slurried in 1:1 CH2CN:H2O (100 ml) and treated with ion exchange resin AG 2-X8 20 chloride form (BioRad) (50 g). The mixture was filtered and treated with 20% HCl (5 ml). After lyophilization the resin exchange was repeated. desired product as the HCl salt (3.5 g) was obtained. MS, 'H-NMR and CHNCl were consistent with the desired 25 product.

10

Example 46

Preparation of β -[[2-[[[3-(amin carbonylamin)phenyl]-carbonyl]amino]acetyl]amin]pyridine-3-pr pan ic acid, hydrochloride salt

Urea (4 g) and ethyl β-[[2-[[(3-aminophenyl)carbonyl]amino]acetyl]amino]pyridine-3-propanoate
trifluoroacetate salt (4 g) were dissolved in 20t
aqueous HCl (50 ml) and refluxed for 6 hours. The
reaction was made basic with KOH (pH>12). After 4
hours the reaction was acidified with TFA and purified
by HPLC (RP-CH₃CN/H₂O). The white solid was dissolved
in 1:1 CH₃CN:H₂O (100 ml) and subjected to the resin
exchange described in Example 43, Step C.
Lyophilization gave the desired product (3.2 g). MS,

1H-NMR and CHNCl were consistent with the desired
product.

Example 47

Pr parati n of (±) β -[[2-[[[3-[[(phenylmethyl)amino]-carbonyl]amino]phenyl]carbonyl]amino]acetyl]amino]-pyridine-3-propanoic acid, hydrochloride salt

The product of Example 48 (5 g) was dissolved in 1:1 CH₂CN:H₂O (75 ml) and treated with KOH. The pH was maintained greater than 12 by addition of KOH. After 4 hours the reaction was acidified with TFA and purified by HPLC (RP-CH₂CN/H₂O). The TFA salt (4.5 g) was obtained after lyophilization. The solid was slurried in 1:1 CH₃CN:H₂O (100 ml) and ion exchange resin, AG 2-X8 chloride form (BioRad)(50 g). The mixture was filtered and treated with 20% HCl (5 ml). After lyophilization the resin exchange process was repeated. The desired product (4.1 g) was obtained as a white solid. MS, ¹H-NMR and CHNCl were consistent with the desired product.

30

Example 48

Preparation f (±) ethyl β -[[2-[[[3-[[[(phenylmethyl)-amino]carbonyl]amino]phenyl]carbonyl]amino]acetyl]-amino]pyridine-3-propanoate, hydrochloride salt

Step A

A solution of \underline{m} -nitrohippuric acid (5.6 g) in DMF (25 ml) was treated with DSC (9.6 g) and a catalytic 15 amount of DMAP. After 5 hours, a solution of ethyl 3amino-3-(3-pyridy1) propanoate 2HCl (8 g) and K_2CO_3 (2 g) in saturated aqueous NaHCO3 (25 ml) was added. reaction mixture was stirred overnight at room temperature. H_2O (25 ml) was added and the mixture was 20 filtered. The resulting solid was washed with ${\rm H}_2{\rm O}$ (25 ml), slurried with CH, CN (25 ml) and filtered. Ethyl β-[[2-[[(3nitrophenyl)carbonyl]amino]acetyl]amino]pyridine-3propanoate (6.5 g) was obtained as a white solid. MS 25 was consistent with the desired product.

Step B

A suspension of the product of Step A (6.5 g) and 5% Pd/C (0.6 g) in $\rm H_2O$ (50 ml) and ethanol (50 ml) was subjected to 50 psi $\rm H_2$ for 3 hours. The mixture was filtered through a celite pad and the excess solvent was removed under reduced pressure. The resulting oil was treated with $\rm CH_2Cl_2$ and the solvent was again removed under reduced pressure. Ethyl β -[[2-[[(3-aminophenyl)carbonyl]amino]acetyl]amino]pyridine-3-

propanoate (5.8 g) was rec vered as a tan foam. MS and H-NMR were consistent with the desired product.

Step C

A solution of the product of Step B (1.9 g) in CH₃CN (5 ml) was treated with benzyl isocyanate (0.8 ml). After 1 hour benzyl isocyanate (0.1 ml) was added to complete the reaction. After 0.25 hour the reaction was treated with H₂O (50 ml). The resulting viscous oil was dissolved in CH₃CN and was acidified with TFA. The solution was purified by HPLC (RP-CH₃CN/H₂O) and lyophilized. The white solid was repurified by HPLC (RP-CH₃CN/H₂O) and treated with 20% HCl (5 ml). The desired product (1.3 g) was obtained as a white solid.

MS, H-NMR and CHNCl were consistent with the desired product.

10

15

20

25

30

35

Example 51

Preparation of (±)ethyl β -[[2-[[[3-[(aminoimin methyl)-amino]phenyl]carbonyl]amino]acetyl]amino]furan-3-propanoate, trifluoroacetate salt

Step A

A suspension of 3-furancarboxaldehyde (8.6 ml), malonic acid monoethyl ester (15.8 g) and ammonium acetate (9.6 g) in isopropyl alcohol (200 ml) was heated to reflux under nitrogen. After 5 hours, the excess solvent was removed under reduced pressure and the semi-solid was treated with $\rm H_2O$ (250 ml) and acidified to pH 2 using 12N HCl. The aqueous layer was washed with $\rm CH_2Cl_2$ (2 x 100 ml). The aqueous layer was neutralized to pH >9 with $\rm K_2CO_3$. The product was extracted with $\rm CH_2Cl_2$ (2 x 100 ml). The organic layer was dried over $\rm Na_2SO_4$ and the excess solvent was removed under reduced pressure to give ethyl β -aminofuran-3-propanoate (5 g) as a golden oil. The MS and $\rm ^1H-NMR$ were consistent with the desired product.

Step B

A solution of m-guanidinohippuric acid HCl (1.4 g) in DMF (5 ml) and pyridine (5 ml) was treated with DSC (1.9 g) and a catalytic amount of DMAP. After 5 hours, to a solution of the product of Step A (1.2 g) in CH₂CN (1 ml) was added saturated aqueous NaHCO₃ (1 ml). The mixture was stirred overnight at room temperature and purified by HPLC (RP-CH₃CN/H₂O). The lyophilized solid (1.2 g) had MS, ¹H-NMR and CHN analysis that were c nsistent with the desired product.

10

Example 52

Preparation of (±) β -[[2-[[[3-[(aminoiminomethyl)-amino]phenyl]carbonyl]amino]acetyl]amino]furan-3-propanoic acid, trifluoroacetate salt

The product of Example 51 (0.6 g) was dissolved in 1:1 CH₂CN:H₂O (15 ml) and was treated with NaOH (pH>12).

After 4 hours the reaction was acidified with TFA and purified by HPLC (RP-CH₂CN/H₂O). The lyophilized solid (0.3 g) had MS, ¹H-NMR and CHN analysis that were consistent with the desired product.

10

Example 53

Preparati n f 3-[[2-[[[3-[(amin iminomethyl)amino]-phenyl]carbonyl]amino]acetyl]amino]pentanedioic acid, trifluoroacetate salt

Step A

Dimethyl 3-ketoglutarate (13 g) in methanol (50 ml) was treated with ammonium formate (5 g) and NaCNBH3 (2 g). 10 ml of $\rm H_2O$ was added and the excess solvent 15 removed under reduced pressure. The semi-solid was dissolved in 5% aqueous HCl (250 ml), and washed with CH_2Cl_2 (2 x 50 ml). The aqueous layer was made basic (pH>9) with K2CO3 and the product was extracted using CH_2Cl_2 (2 x 75 ml). The organic layers were combined 20 and dried with Na2SO4. The excess solvent was removed to give 2.5 g of the dimethyl (±)3-aminoglutarate. This was dissolved in methanol (50 ml) and treated with 4N HCl/Dioxane (10 ml). The excess solvent was removed under reduced pressure to give a 2.7 g of dimethyl 25 (±)3-aminoglutarate hydrochloride. MS and H-NMR were consistent with the desired product.

Step B

A solution of m-guanidinohippuric acid HCl (1.5 g) in DMF (4.5 ml) and pyridine (4.5 ml) was treated with DSC (1.8 g) and a catalytic amount of DMAP. After 2 hours, a solution of dimethyl 3-aminoglutarate HCl (1.1 g) and NMM (350 μl) in H₂O (3 ml) was added to the reaction. The reaction was stirred overnight at room temperature and the product was isolat d by HPLC. 1.5 g of 3-[[2-[[[3-[(amin iminomethyl)amin]phenyl]-

carbonyl]amino]acetyl]amino]p ntanedioic acid, bismethyl ester was obtained as a white solid. MS and H-NMR were consistent with the desired product.

5 Step C

10

The product of Step B (750 mg) was dissolved in 1:1 CH₃CN:H₂O (40 ml) and treated with KOH (pH>12). After 4 hours, the reaction was acidified with TFA and purified by HPLC (RP-CH₃CN/H₂O). The lyophilized solid (400 mg) had MS, ¹H-NMR and CHN analysis that were consistent with the desired product.

10

Example 54

Preparation f (±) hydrogen methyl 3-[[2-[[[3-[(aminoimin methyl)amino]phenyl]carbonyl]amino]acetyl]amino]pentanedioate, trifluoroacetate salt

Step A

A solution of m-guanidinohippuric acid HCl (1.5 g) in DMF (4.5 ml) and pyridine (4.5 ml) was treated with DSC (1.8 g) and a catalytic amount of DMAP. After 2 hours, a solution of dimethyl 3-aminoglutarate HCl (1.1 g) and NMM (350 μl) in H₂O (3 ml) was added to the reaction. The reaction was stirred overnight at room temperature and the product was isolated by HPLC. 3[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]-amino]acetyl]amino]pentanedioic acid, bis methyl ester (1.5 g) as a white solid was obtained. MS and H-NMR were consistent with the desired product.

25 <u>Step B</u>

30

750 mg of the product of Step A was dissolved in Na_2PO_4 buffer (50 ml, 50 mM, pH 8.5) and treated with porcine esterase (200 μ l). The pH was adjusted using LiOH. After 48 hours, the solution was acidified with TFA and purified by HPLC (RP-CH₃CN/H₂O). The lyophilized solid (175 mg) had MS, ¹H-NMR and CHN analysis consistent with the desired product.

10

15

20

25

30

35

Example 55

Preparati n of (±) β -[[2-[[[3-[(amin imin m thyl)-amino]phenyl]carbonyl]amino]acetyl]amino]furan-2-propanoic acid, trifluoroacetate salt

Step A

A suspension of 2-furancarboxaldehyde (4.8 g), ammonium acetate (9.6 g) and malonic acid monoethyl ester (6.6 g) in isopropanol (50 ml) was refluxed for 6 hours. The excess solvent was removed under reduced pressure and the resulting oil was treated with ethyl acetate (100 ml) and 5% aqueous HCl (400 ml). aqueous layer was then washed with ethyl acetate (100 ml). The aqueous layer was made basic with K2CO3 (pH 9). The product was extracted with CH2Cl2 (2 x 100 ml). The organic layers were combined and dried with Na2SO4 and the excess solvent was removed. Ethyl β aminofuran-2-propanoate (2.5 g) as a dark oil was recovered. MS and H-NMR were consistent with the desired product. The dark oil was treated as described in Example 53, Step A to give 2.7 g of ethyl β aminofuran-2-propanoate hydrochloride.

Step B

A solution of m-guanidinohippuric acid HCl (272 mg) in DMF (1 ml) and pyridine (1 ml) was treated with DSC (450 mg) and a catalytic amount of DMAP. After 2 hours, a solution of the product of Step A (221 mg), NMM (111 μ l) in H₂O (1 ml) and CH₃CN (1 ml) was added. The reaction was stirred ov rnight at room temperatur .

(±) Ethyl β -[[2-[[[3-[(amin iminomethyl)-amino]phenyl]carbonyl]amino]acetyl]amino]furan-2-propanoat was purified by HPLC (RP-CH₃CN/H₂O) and lyophilized to give a white solid (200 mg). MS was consistent with the desired product.

Step C

5

The product of Step B (200 mg) was dissolved in 1:1 CH₃CN:H₂O (20 ml) and treated with LiOH (pH>12).

After 4 hours, the reaction was acidified with TFA and purified by HPLC (RP-CH₃CN/H₂O). The lyophilized solid (175 mg) had MS, ¹H-NMR and CHN analysis that were consistent with the desired product.

10

15

20

25

30

35

Example 56

Preparation of (±) β -[[2-[[[3-[(aminoiminomethyl)-amino]phenyl]carbonyl]amino]acetyl]amino]naphthalene-2-propanoic acid, trifluoroacetate salt

Step A

A suspension of 2-naphthaldehyde (7.8 g) and ammonium acetate (9.6 g) in isopropyl alcohol (50 ml) was heated for 1 hour at reflux. Malonic acid (5.2 g) was added and reflux was continued for 3 hours. The reaction was filtered while hot and the solid washed with hot isopropyl alcohol (50 ml) followed by CH₂CN (100 ml). The white solid was dried overnight in vacuo and β -aminonaphthalene-2-propanoic acid (9 g) was recovered. MS and ¹H-NMR were consistent with the structure.

Step B

A suspension of the product of Step A (2.5 g) in methanol (100 ml) was treated with 4N HCl/dioxane (10 ml). The resulting solution was stirred overnight. The excess solvent was removed under reduced pressure and the semi solid was purified by HPLC (RP-CH₂CN/H₂O). The solid was dissolved in CH₂CN/H₂O, treated with 20% aqueous HCl (5 ml) and lyophilized to give methyl β -aminonaphthalene-2-propanoate hydrochloride (1.1 g). MS and ¹H-NMR were consistent with the structure.

Step C

As lutin f m-guanidin hippuric acid (0.7 g) in DMF (4 ml) and pyridine (4 ml) was treated with DSC (1.1 g) and a catalytic amount of DMAP. After 4 hours, a solution of the product of Step B (0.9 g), NMM (0.4 ml) in DMF (2 ml), pyridine (2 ml) and H₂O (1 ml) were added. The reaction was stirred overnight at room temperature and acidified with TFA. The desired product was isolated by HPLC (RP-CH₃CN/H₂O). The lyophilized solid (0.7 g) had MS, ¹H-NMR and CHN analysis that were consistent with the desired product.

Step D

The product of Step C (200 mg) was dissolved in

1:1 CH₃CN:H₂O (20 ml) and treated with KOH (pH>12).

After 4 hours, the reaction was acidified with TFA and purified by HPLC (RP-CH₃CN/H₂O). The lyophilized solid (175 mg) had MS, ¹H-NMR and CHN analysis that were consistent with the desired product.

10

10

Example 57

Pr paration of (±) methyl β -[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]-amino]thiophene-3-propanoate, trifluoroacetate salt

Step A

A solution of 3-thiophenecarboxaldehyde (11.2 g)
in isopropanol (100 ml) was treated with ammonium
acetate (20 g). The resulting mixture was heated and
malonic acid (10.4 g) was added. The reaction was
refluxed for 4 hours and filtered while hot. The solid
was washed with hot isopropanol (2 x 50 ml) and dried
in vacuo overnight at 40°C. 8 g of β-aminothiophene-3propanoic acid was recovered. MS and H-NMR were
consistent with the desired product.

Step B

A suspension of the product of Step A (5 g) in methanol (100 ml) was treated with 4N HCl/dioxane (10 ml). The reaction was stirred overnight. The excess solvent was removed under reduced pressure. Methyl β -aminothiophene-3-propanoate hydrochloride (7.8 g) was isolated as a yellow foam. MS and H-NMR were consistent with the desired product.

Step C

35

A solution of m-guanidinohippuric acid HCl (2.7 g) in DMF (10 ml) and pyridine (10 ml) was treated with DSC (4.5 g) and a catalytic amount of DMAP. After 4 h urs, a soluti n of the product of Step B (2.2 g) and

NMM (1.3 ml) in DMF (5 ml) was added and the reaction was stirred overnight at r m temperatur. The r action mixture was tr ated with 1:1 $\text{CH}_3\text{CN}:\text{H}_2\text{O}$ (50 ml) and acidified with TFA. The desired compound was isolated by HPLC (RP-CH $_3\text{CN}/\text{H}_2\text{O}$). The lyophilized solid (2.2 g) had MS, ^1H -NMR and CHN analysis that were consistent with the desired product.

10

25

Example 58

Preparation of ethyl 3S-[[2-[[[3-[(aminoiminomethyl)-amino]phenyl]carbonyl]amino]acetyl]amino]-4-pentynoate, trifluoroacetate salt

in DMF (10 ml) and pyridine (10 ml) was treated with DSC (4.5 g) and a catalytic amount of DMAP. After 4 hours, a solution of ethyl 3S-amino-4-pentynoic acid, hydrochloride (1.8 g) and NMM (1.1 ml) in DMF (5 ml) was added and the reaction was stirred overnight at room temperature. The reaction mixture was treated with 1:1 CH₃CN:H₂O (50 ml) and acidified with TFA. The desired compound was isolated by HPLC (RP-CH₃CN/H₂O). The lyophilized solid (2.6 g) had MS, ¹H-NMR and CHN analysis that were consistent with the desired product.

10

20

Example 59

Preparation of (±) β -[[2-[[[3-[(aminoimin methyl)-amino]phenyl]carbonyl]amino]acetyl]amino]thiophene-3-propanoic acid, trifluoroacetate salt

The product of Example 57 (750 mg) was dissolved in 1:1 CH₂CN:H₂O (20 ml) and treated with KOT (pH>12). After 4 hours, the reaction was acidified with TFA and purified by HPLC (RP-CH₂CN/H₂O). The lyophilized solid (500 mg) had MS, H-NMR and CHN analysis that were consistent with the desired product.

Preparation of (±) 2-[3-[[2-[[[3-[(aminoimin methyl)-amino]phenyl]carbonyl]amino]acetyl]amino]-4-carboxybutyl]sulfonyl]benzoic acid, trifluoroacetate salt

15 Step A

10

20

30

35

A solution of 2-[(3-amino-4-carboxybuty1)thio]-benzoic acid (1 g) (prepared according to U.S. 5,409,939) in methanol (50 ml) was treated with 4N HCl/dioxane (10 ml) overnight. The excess solvent was removed under reduced pressure to give the desired product (0.9 g). MS of the white solid, methyl 2-[(3-amino-4-(methoxycarbonyl)butyl]thio]benzoate was consistent with the proposed structure.

25 Step B

A solution of m-guanidinohippuric acid HCl (0.8 g) in DMF (3 ml) and pyridine (3 ml) was treated with DSC (1.2 g) and a catalytic amount of DMAP. After 2 hours, a solution of the product of Step A (1 g), NMM (0.3 ml) in DMF (3 ml) was added. The reaction was stirred overnight at room temperature. KOH was added until pH greater than 12. After 4 hours, the reaction was acidified and purified by HPLC (RP-CH₃CN/H₂O). The lyophilized solid, (±) 2-[3-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]-amino]-4-carboxybutyl]thio]benzoic acid,

trifluoroac tate salt (750 mg) had MS, H-NMR and CHN analysis that were c nsistent with the desired product.

Step C

A solution of the product of Step B (320 mg) in 1:1 CH₂CN:H₂O (50 ml) was treated with m-chloroperoxybenzoic acid (340 mg). The reaction was stirred overnight at room temperature and purified by HPLC (RP-CH₃CN/H₂O). The lyophilized solid (300 mg) had MS, ¹H-NMR and CHN analysis that were consistent with the desired product.

10

Example 61

Preparati n of (±) β -[[2-[[[3-[(amin iminomethyl)-amino]phenyl]carbonyl]amino]acetyl]amino]thiophene-2-propanoic acid, trifluoroacetate salt

Step A

A solution of 3-amino-3-(2-thienyl) propanoic acid

(0.5 g) [prepared substituting a molar equivalent amount of 2-thiophene-carboxaldehyde in Example 57, Step A] in methanol (50 ml) was treated with 4N HCl/dioxane (10 ml). After 6 hours the excess solvent was removed under reduced pressure to give a waxy solid. Treatment with Et₂O/CH₂CN produced methyl β-aminothiophene-2-propanoate (370 mg) as a white powder. MS and ¹H-NMR were consistent with the desired product.

Step B

A solution of m-guanidinohippuric acid HCl (0.4 g) in DMF (1.5 ml) and pyridine (1.5 ml) was treated with DSC (0.6 g) and a catalytic amount of DMAP. After 3 hours, a solution of the product of Step A (0.3 g) and NMM (220 μl) in DMF (1.5 ml) was added. The reaction was stirred overnight at room temperature. The ester was isolated by HPLC (RP-CH₃CN/H₂O) and lyophilized. The resulting white solid was treated with KOH (pH>12) in 1:4 CH₃CN:H₂O. After 4 hours, the reaction was acidified by TFA and purified by HPLC (RP-CH₃CN/H₂O).

The lyophilized solid (300 mg) had MS, ¹H-NMR and CHN analysis that were consistent with the desired product.

Example 62

Preparation of (±) methyl 2-[[3-[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]-4-carboxybutyl]thio]benzoate, trifluoroacetate salt

in DMF (3 ml) and pyridine (3 ml) was treated with DSC (1.2 g) and a catalytic amount of DMAP. After 2 hours, a solution of methyl 2-[[3-amino-4-(methoxycarbonyl)-butyl]thio]benzoate (1 g) [prepared according to U.S. 5,409,939], NMM (0.3 ml) in DMF (3 ml) was added. The reaction was stirred overnight at room temperature. KOH was added until the pH was greater than 12. After 2 hours, the reaction was acidified and purified by HPLC (RP-CH₃CN/H₂O). The lyophilized solid, (250 mg) had MS, ¹H-NMR and CHN analysis that were consistent with the desired product.

10

15

Example 63

Pr parati n f (±) methyl 3-[[2-[[[3-[(amin iminomethyl)amino]ph nyl]carbonyl]amino]acetyl]amino]-5-[(4-methylphenyl)thio]pentanoate, trifluoroacetate salt

Step A

A solution of 3-amino-5-[(4-methylphenyl)thio]pentanoic acid (1.0 g) [prepared according to U.S. 5,409,939] in methanol (50 ml) was treated with 4N HCl/dioxane (10 ml). The reaction was stirred overnight at room temperature. The excess solvent was removed under reduced pressure. Methyl 3-amino-5-[(4-20 methylphenyl)thio]pentanoate (1.1 g) as a white solid was obtained. MS and H-NMR were consistent with the desired product.

25 Step B

30

35

A solution of m-guanidinohippuric acid HCl (0.6 g) in DMF (2 ml) and pyridine (2 ml) was treated with DSC (0.7 g) and a catalytic amount of DMAP. After 1 hour, a solution of the product of Step λ (0.6 g) in saturated aqueous NaHCO; (1.5 ml) and acetonitrile (1.5 ml) was added. The reaction was stirred for 2 hours at room temperature. The reaction was acidified with TFA and the title compound (0.6 g) was isolated by HPLC as a white solid. MS and H-NMR were consistent with the desired product.

10

15

20

25

30

35

Example 64

Preparati n of (±) methyl 3-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]-4-[[(4-methylphenyl)sulfonyl]amino]butanoate, trifluoroacetate salt

Step A

A mixture of aminoacetaldehyde dimethyl acetal (15.8 g), p-toluenesulfonylchloride (19.1 g) and Et₃N (10.1 g) in CH₂Cl₂ (200 ml) was stirred for 2 hours. The reaction was treated with 5% aqueous HCl (50 ml) and Et₂O (200 ml). The layers were separated and the organic layer was washed with 5% aqueous HCl (50 ml), H₂O (50 ml) and dried over Na₂SO₄. The excess solvent was removed under reduced pressure to give 30 g of the desired acetal;

Step B

A mixture of the acetal from Step A (10 g), CH₃CN (70 ml) and aqueous HCl (15 ml) was heated to 50°C for 10 minutes. Diethylether was added and the desired aldehyde was extracted. The aldehyde was then used without further purification. The desired aldehyde

Step C

A mixture f ethyldiaz acetate (2.3 g), $SnCl_2$ (2.5 g) in CH_2Cl_2 (75 ml) was treated with the aldehyde fr m Step B (5 g). After 2 hours, aqueous HCl and Et₂O were added. The organic layer was separated and dried with MgSO₄. The solvent was removed under reduced pressure to yield 5 g of crude β -keto ester

used without further purification.

10

15

Step D

The β -keto ester from Step C (12 g), methanol (100 ml), H_4N^+ HCO₂ (30 g) and NaCNBH₃ (1.3 g) was stirred. After 24 hours, the excess solvent was removed under reduced pressure. The resulting semi-solid was treated with CH_2Cl_2 and the desired product was extracted using aqueous HCl. Removal of the solvent gave 6 g of crude

 β -amino ester H_{NN} ; confirmed by MS

and H-NMR.

20

25

30

Step E

A solution of m-guanidinohippuric acid HCl (337 mg) in DMF (1 ml) and pyridine (1 ml) was treated with DSC (0.4 g) and a catalytic amount of DMAP. After 2 hours, a solution of the product of Step D (322 mg) and NMM (220 μl) in DMF (1 ml) was added. The reaction was stirred overnight at room temperature. The reaction was acidified with TFA and the title compound (250 mg) was isolated by HPLC (RP-CH₃CN/H₂O) as a white solid. MS, CHN and ¹H-NMR were consistent with the desired product.

Example 65

Preparation f 3-[[2-[[[3-[(amin imin m thyl)amino]-phenyl]carbonyl]amino]acetyl]amino]-4-[[(4-methylphenyl)sulfonyl]amino]butanoic acid, trifluoroacetate salt

A solution of the product of Example 64 (180 mg) in 1:1 CH₂CN:H₂O (4 ml) was treated with LiOH (100 mg). After 2 hours, the reaction was acidified with TFA and purified by HPLC (RP-CH₂CN/H₂O). The title compound (100 mg) was isolated as a white solid. MS, ¹H-NMR and CHN analysis were consistent with the desired product.

Example 66

Pr paration of $(\pm)3-[[2-[[3-[(amin imin methyl)amino]-phenyl]carbonyl]amino]acetyl]amino]-5-[(4-methylphenyl)thio]pentanoic acid, trifluoroacetate salt$

A solution of 180 mg of the product from Example

63 in 1:1 CH₃CN:H₂O (4 ml) was treated with LiOH (100

mg). After 2 hours, the reaction was acidified with

TFA and purified by HPLC (RP-CH₃CN/H₂O). 3-[[2-[[[3[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]
amino]-5-[(4-methylphenyl)thio]pentanoic acid,

trifluoroacetate salt (100 mg) was isolated as a white

solid. MS, 'H-NMR and CHN analysis were consistent with
the desired product.

Example 67

Preparation f (±)3-[[2-[[[3-[(amin iminomethyl)amino]-phenyl]carbonyl]amino]acetyl]amino]-5-[(4-methylphenyl)sulfonyl]pentanoic acid, trifluoroacetate salt

in 1:1 CH₃CN:H₂O (4 ml) was treated with of m-chloroperoxybenzoic acid (460 mg). The reaction was stirred overnight at room temperature. The reaction was treated with LiOH (200 mg). After 2 hours, the reaction was acidified with TFA and purified by HPLC (RP-CH₃CN/H₂O). 3-[[2-[[[3-[(aminoiminomethyl)amino]-phenyl]carbonyl]amino]acetyl]amino]-5-[(4-methylphenyl)sulfonyl]pentanoic acid, trifluoroacetate salt (180 mg) was isolated as a white solid. MS, H-NMR and CHN analysis were consistent with the desired product.

10

Example 68

Preparation of 3S-[[2-[[[3-[(amin iminomethyl)amino]-phenyl]carbonyl]amino]acetyl]amino]-4(phenylthio)butanoic acid, trifluoroacetate salt

Step A

15 A suspension of phenylmethyl 3S-[[(1,1dimethylethoxy) carbonyl]amino]-4-[(methylsulfonyl)oxy]butanoate (3.9 g) [prepared according to U.S. 5,409,939], thiophenol (1.1 ml) and K_2CO_3 (1.4 g) in DMF (20 ml) was stirred at room temperature overnight. reaction was treated with ethyl acetate and the organic 20 layer was washed with H_2O (2 x 25 ml) and saturated NaCl (25 ml). The organic layer was dried with Na2SO4 and the excess solvent removed under reduced pressure to give a golden oil (4.5 g). The oil was dissolved in 25 CH₂Cl₂ (100 ml) and treated with TFA (20 ml). After 4 hours the excess solvent was removed under reduced pressure and the product was purified by HPLC (RP-CH₂CN/H₂O). Phenylmethyl 3S-amino-4-(phenylthio) butanoate TFA salt (1.2 g) was isolated as 30 a white solid. MS and H-NMR were consistent with the desired product.

Step B

35

A solution of m-guanidinohippuric acid HCl (273 mg) and NMM (110 μ l) in DMF (1 ml) was treated with pivaoyl chloride (120 μ l). After 30 minutes, a solution of the product from St p A (208 mg), NMM (110

μl) and a catalytic am unt of DMAP in DMF (1 ml) was add d. After 4 hours, ph nylmethyl 3S-[[2-[[[3-[(aminoimin methyl)amino]phenyl]carbonyl]amin]acetyl]-amino]-4-(phenylthio)butanoate (200 mg) was isolated by HPLC (RP-CH₃CN/H₂O) as a white solid. MS and ¹H-NMR were consistent with the desired product.

Step C

A solution of 200 mg of the product of Step B in

1:1 CH₃CN:H₂O (4 ml) was treated with KOH (pH>12).

After 2 hours, the reaction was acidified with TFA and
the product was isolated by HPLC (RP-CH₃CN/H₂O). 3S
[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]-4-(phenylthio)butanoic acid,

trifluoroacetate salt (100 mg) was isolated as a white
solid. MS, ¹H-NMR and CHN analysis were consistent with
the desired product.

10

Example 69

Pr parati n of 3S-[[2-[[[3-[(amin iminomethyl)amino]-phenyl]carbonyl]amino]acetyl]amino]-4-pentynoic acid, trifluoroacetate salt

Step A

A solution of m-guanidinohippuric acid HCl
(2.7 g) in DMF (10 ml) was treated with pivaoyl
chloride (1.3 ml). After 30 minutes, a solution of 3samino-4-pentynoic acid, monohydrochloride (1.8 g), NMM
(1.5 ml) and a catalytic amount of DMAP in DMF (10 ml)
was added. The reaction was stirred overnight at room
temperature. Ethyl 3S-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino-4-pentynoate,
TFA salt (1.5 g) was isolated by HPLC (RP-CH₃CN/H₂O) as
a white solid. MS was consistent with the desired
product.

25 Step B

30

A solution of the product of Step A (1.5 g) in 1:1 $\rm H_2O/CH_3CN$ (75 ml) was treated with LiOH (pH>12). After 2 hours, the reaction was acidified with TFA and the product was purified by HPLC (RP-CH₃CN/H₂O). The title compound as a lyophilized solid (1.2 g), had MS, $^{\rm l}{\rm H-NMR}$ and CHN analysis that were consistent with the desired product.

10

Example 70

Pr parati n of 3R-[[2-[[[3-[(aminoimin methyl)amino]-phenyl]carbonyl]amino]acetyl]amino]-4-pentynoic acid, trifluoroacetate salt

Step A

A suspension of m-guanidinohippuric acid HCl (0.8 g) and NMM (0.3 ml) in DMF (2.5 ml) was treated with pivacyl chloride (0.4 ml). After 30 minutes, a solution of ethyl 3R-amino-4-pentynoate (0.4 g), NMM (0.3 ml) and a catalytic amount of DMAP in DMF (2.5 ml) was added. The reaction was stirred overnight at room temperature. Ethyl 3R-[[2-[[[3-[(aminoiminomethyl)-amino]phenyl]carbonyl]amino]acetyl]amino]-4-pentynoic acid trifluoroacetate salt (0.5 g) was isolated by HPLC (RP-CH₂CN/H₂O) as a white solid. MS was consistent with the desired product.

25 Step B

30

A solution of the product of Step A (0.5 g) in 1:1 CH₂CN/H₂O (75 ml) was treated with LiOH (pH>12). After 2 hours, the reaction was acidified with TFA and the product was purified by HPLC (RP-CH₂CN/H₂O). The title compound as a lyophilized solid (250 mg), had MS, H-NMR and CHN analysis that were consistent with the desired product.

10

Example 71

Preparati n of 2-[[25-[[2-[[[3-[(aminoiminomethyl)-amino]phenyl]carbonyl]amino]acetyl]amino]-2(carboxymethyl)ethyl]sulfonyl]benzoic acid, TFA salt

A solution of Example 72 (120 mg) in methanol (10 ml) was treated with m-chlorobenzoic acid (100 mg).

The reaction was stirred overnight at room temperature.

The product was purified by HPLC (RP-CH₃CN/H₂O). The title compound (100 mg) was isolated as a white solid.

MS, ¹H-NMR and CHNS analysis were consistent with the desired product.

Pr parati n of 2-[[2S-[[2-[[[3-[(aminoiminomethyl)-amino]phenyl]carbonyl]amino]acetyl]amino]-2-(carboxymethyl)ethyl]thio]benzoic acid, trifluoroacetate salt

15 Step A

5

10

A solution of Example A (6.2 g) in CH₂Cl₂ (40 ml) at 0°C was treated with triethylamine (4.25 ml) and mesyl chloride (2.3 ml). After 3 hours, phenylmethyl 3S-[[(1,1-dimethylethoxy)carbonyl]amino]-4-20 [(methylsulfonyl)oxy]butanoate was isolated by extraction using ethyl acetate/diethyl ether. The organic layer was dried using Na2SO4 and the excess solvent was removed to give phenylmethyl 3S-[[(1,1dimethylethoxy)carbonyl]amino]-4-[(methylsulfonyl)oxy]butanoate (8.8 g). A suspension of the resulting 25 product, K2CO3 (3.0 g), and catalytic amounts of 18crown-6, DMAP and tetrabutylammonium hydrogen sulfate in DMF (10 ml) was treated with methyl thiosalicylate (3.8 ml). After 2 hours the product was extracted with ethyl acetate. The organic layer was dried with Na2SO4 30 and the excess solvent was removed under reduced pressure. The resulting oil (10.2 g) was dissolved in CH₂Cl₂ (50 ml) and treated with TFA (20 ml). reaction was stirred overnight at room temperature. 35 The excess solvent was removed under reduced pressure and the oil was dissolved in 1:1 CH3CN:H2O and made basic using NaOH (pH>12). Aft r 2 h urs, the reaction

was acidified using TFA and the pr duct was is lated using HPLC (RP-CH₃CN/H₂O). 20% HCl (2 ml) was added and th product was lyophilized. A yellow solid (0.9 g) was obtained. MS was consistent with 2-[(2-amino-3-carboxypropyl)thio]benzoic acid HCl salt.

Step B

5

A solution of 3-aminobenzoic acid (41.1 g) in dioxane (300 ml) was treated with 3,5-dimethyl-(pyrazole-1-carboxamidine) HNO₃ (100 g), DIEA (90 ml) 10 and H_2O (100 ml). The reaction was refluxed for 3 hours and stirred overnight at room temperature. The solid was filtered and washed with dioxane (150 ml) and 1:1 dioxane: H2O (250 ml). The solid was then suspended in diethyl ether (400 ml) and CH₂CN (100 ml) and treated 15 with 4N HCl/dioxane (100 ml) and 20% HCl (1 ml). After 48 hours, the reaction was filtered and dried to give 3-[(aminoiminomethyl)amino]benzoic acid (34.1 g) as a lavender solid. MS was consistent with the desired 20 product.

Step C

A solution of 2-[(2S-amino-4-carboxybutyl)thio]benzoic acid (0.9 g) and DIEA (1.5 ml) in DMF (5 ml)

25 was treated with N-[1,1-dimethylethoxy)carbonyl]glycine, 2,5-dioxopyrrolidin-1-yl ester (1.1 g) and a
catalytic amount of DMAP. After 1 hour, methanol
(5 ml) and 4N HCl/dioxane (10 ml) were added. After 18
hours, methyl 2-[[2S-[(2-aminoacetyl)amino]-330 (methoxycarbonyl)-propyl]benzoate was isolated by HPLC
(RP-CH₂CN/H₂O). The desired product (1.0 g) was
obtained as a white solid. MS was consistent with the
desired product.

Step D

A solution of the product f Step C (200 mg) and NMM (130 μ l) in DMF (1 ml) was treated with f IBCF (152 μ l). After 2 minutes, the reaction was treated with a solution of the product of Step B (330 mg), NMM (260 μ l) and a catalytic amount of DMAP in DMF (1 ml). After 2 hours, the reaction was treated with H₂O and made basic using NaOH (pH>12). After 4 hours, the reaction was acidified with TFA and the product was isolated by HPLC (RP-CH₃CN/H₂O). The title compound (200 mg) was obtained as a white solid. MS, ¹H-NMR and CHNS analysis were consistent with the desired product.

Preparation of (±)ethyl β -[[2-[[[3-[(aminoiminomethyl)-amino]phenyl]carbonyl]m thylamino]ac tyl]amino]-pyridine-3-propanoate, bis(trifluoroacetate) salt

Step A

10

To a 200 mL flask equipped with a teflon coated stir bar was added N-t-Boc-sarcosine (3.80 g, 0.019 15 mole) and dry DMF (70 mL). To this was added N-methyl morpholine, (NMM), (2.1 mL, 1.92 g, 0.019 mole) and the resulting mixture was cooled to 0°C (salt - ice water bath). After several minutes isobutyl-chloroformate, 20 (IBCF), (95%, 2.74 g, 2.6 mL, 0.019 mole) was added. After about five minutes a solution of ethyl 3-amino-3pyrid-3-yl propionate dihydrochloride salt (5.0 g, 0.019 mole) and NMM (3.84 g, 0.038 mole) in DMF (40 mL) was added and the resulting mixture allowed to react 25 overnight at 0-5°C. The volatiles were removed on a rotary evaporator (60°C) and a semi-solid was obtained. This was taken up in ethyl acetate and dilute hydrochloric acid, pH 2. To the aqueous layer was added EtOAc (200 mL) and the pH of the aqueous layer 30 was brought to about 7 by the addition of solid sodium bicarbonate. The pH was adjusted to 8 by the addition of dilute aqueous NaOH. The layers were separated and the aqueous layer washed with EtOAc. The combined organic layers were dried (Na2SO4) and volatiles removed 35 to give a thick oil whose MS was consistent with the desired product.

Step B

The product fr m Step A was diss lved in dioxane (20 mL) and transferred t a round-bottom flask equipped with a teflon-covered stir bar and c nnected to a mineral oil bubbler. To this was added 4 N HCl in dioxane (about 30 mL). After about one hour a vacuum was applied to remove excess HCl gas and the reaction mixture was concentrated on a rotovap. Excess HCl was chased with a second evaporation from dioxane to obtain a white foam. The MS and NMR were consistent with the desired product as a dihydrochloride salt.

Step C

10

The title compound was obtained by coupling 3guanidinobenzoic acid with the product of Step B using 15 substantially the same conditions and procedure as employed in Step A. Thus, to 3-guanidinobenzoic acid hydrochloride (1.5 g, 7.0 mmole, Aldrich) dissolved in DMF (70 mL) was added an equivalent of NMM (0.77 mL, 7.0 mmole) and the mixture cooled to 0°C. To this was 20 added one equivalent of IBCF (0.91 mL, 7 mmole) and after several minutes a solution of 1.1 equivalent of the sarcosine pyridyl amino acid ester prepared in Step B (2.4 g of di HCl salt) and NMM (0.78 mL) in DMF 25 (about 50 mL) was added and the reaction mixture allowed to warm to room temperature overnight. Volatiles were removed and the product isolated by preparative reverse phase high performance liquid chromatography (RPHPLC) using a gradient of 99:1 water, 0.05% TFA: acetonitrile, 0.05% TFA to 45:55 over 60 30 minutes at 80 mL/min flow rate. The desired product fractions were combined and lyophilized to give the title compound (0.96 g) as a fluffy solid whose NMR and MS were consistent with the desired product.

Preparation of $(\pm)\beta$ -[[2-[[[3-[(aminoiminomethyl)amino]-phenyl]carbonyl]methylamino]acetyl]amino]pyridine-3-propanoic acid, bis(trifluoroacetate) salt

10

15

20

5

The product obtained in Example 79 (0.33 g) was dissolved in water (20 mL) and the pH adjusted to 11 by the addition of dilute aqueous LiOH. After about one hour the ester was substantially hydrolyzed as indicated by analytical C-18 HPLC. The desired product $(\pm)\beta$ -[[2-[[[3-[(aminoiminomethyl)amino]phenyl]-carbonyl]methylamino]acetyl]amino]pyridine-3-propanoic acid, bis(trifluoroacetate) salt was isolated by preparative C-18 HPLC using substantially the same conditions outlined in Example 79, Step C, and lyophilized (0.19 g). Proton NMR, FAB MS, and elemental analysis (CHN) were consistent with the desired product.

25

Preparati n of ethyl β -[[2-[[[3-[(aminoiminomethyl)-amino]phenyl]carbonyl]amino]-1-exopropyl]amino]-pyridine-3-propanoate, bis(trifluoroacetate) salt

Step A

5

10

15

25

30

35

R,S-N-t-Boc alanine (2.0 g, 0.0106 mole) was coupled to ethyl 3-amino-3-pyridyl-propionate dihydrochloride (3.2g). Using the procedure of Example 79, Step A. The product obtained (3.42 g, 88% isolated yield) had MS and NMR consistent with the desired N-Boc product.

20 Step B

The Boc protecting group was removed from the product of Step A using the procedure of Example 79, Step B to obtain the dihydrochloride salt (3.5 g) as a white solid whose MS and NMR spectrum were consistent with the desired amino acid ester.

Step C

Preparation of ethyl \$\beta-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]-1oxopropyl]amino]pyridine-3-propanoate,
bis(trifluoroacetate) salt. The amino acid ester (1.6
g) obtained in Step B was coupled to 3-guanidinobenzoic
acid (0.75 g, 3.5 mmole) using the conditions of
Example 79, Step C to obtain the title compound (1.8g,
2.7 mmole, 79% isolated yield) bis trifluoroacetate
salt as a white solid after lyophilization. MS and
pr ton NMR were consistent with the desired product.

10

Exampl 82

Preparati n f β -[[2-[[[3-[(aminoiminomethyl)amino]-phenyl]carbonyl]amino]-1-oxopropyl]amino]pyridine-3-propanoic acid, bis(trifluoroacetate) salt

The product of Example 81 (0.5 g) was hydrolyzed to the acid using the procedure of Example 80. The desired product as the di-TFA salt was isolated by preparative C-18 HPLC using substantially the same conditions outlined in Example 79, Step C, and lyophilized (0.45 g). Proton NMR and FAB MS were consistent with desired product.

Pr parati n of (±) β -[[2-[[[3-[(amin imin methyl)-amino]-4-methylphenyl]carbonyl]amino]acetyl]-amino]pyridine-3-propanoic acid, bis(trifluoroacetate) salt

Step A

10

15

30

35

N-t-Boc glycine was coupled to 3-amino-3-(3-pyridyl) propionic acid dihydrochloride (5.0 g, 0.019 mole) using the procedure of Example 79, Step A to obtain, after work-up, a yellow oil (6.0 g, 90%) whose MS was consistent with the desired compound.

Step B

The Boc protecting group was removed by dissolving the product of Step A (5.9 g) in dioxane (about 20 mL) and TFA and the reaction was allowed to proceed for several minutes until the evolution of gas ceased. The volatiles were removed on a rotavap to obtain a brown oil. MS and NMR were consistent with the desired product.

Step C

The amino-ester prepared in Step B was coupled to 4-methyl-3-nitrobenzoic acid using the procedure of Example 79, Step C to obtain an oil that was purified by preparative RPHPLC (C-18) to obtain the desired coupled product (1.76 g) as an amorphous solid whose NMR and MS were consistent with the desired product.

Step D

5

10

15

The nitr group present in the product from Step C was reduced to the anilin using the following procedure. The product from Step C (1.75 g) was transferred to a 6 oz. Fischer-Porter pressure bottle equipped with a pressure gauge and inlet and outlet valves. The starting compound was dissolved in glacial acetic acid, 3% Pd on carbon catalyst (about 1 g) was added and the vessel sealed. After three vacuum-nitrogen cycles the vessel was pressurized with hydrogen (55 psig) and the reaction was allowed to proceed overnight at room temperature. The catalyst was removed by filtering through celite and the colorless solution concentrated to give a yellow, viscous oil (2.0 g) whose MS was consistent with the desired aniline.

Step E

guanylated using the following procedure. The aniline was dissolved in acetonitrile (about 50 mL) and 1H-pyrazole-1-carboxamidine hydrochloride (0.342 g, 2.3 mmole) added in water along with triethylamine (0.64 g, 0.92 mL, 6.4 mmole) and the solution brought to reflux.

After heating overnight the volatiles were removed on the rotovap and the semi-solid obtained purified by preparative RPHPLC to obtain the desired guanidated product (0.3 g after lyophilization) whose NMR and MS were consistent with the desired structure.

Step F

30

35

The quanidino-ester obtained in Step E was hydrolyzed to the acid by dissolving the ester (0.3 g) in water (20 mL) and the pH brought to 11 by the addition of dilute LiOH. After about an hour complete conversion to the acid was observed by analytical RPHPLC and the title c mp und, purified by pr parative

HPLC and ly philized to obtain the di-TFA salt as a white powder (0.19 g) whose NMR and MS wer consistent with the desired product.

Preparation of β -[[2-[[(3-amino-4-methylphenyl)-carbonyl]amino]acetyl]amino]pyridine-3-pr panoic acid, bis(trifluoroacetate) salt

The aniline-ester obtained in Example 83, Step D was hydrolyzed to the acid using conditions similar and purification scheme similar to Example 83, Step F to obtain the desired aniline-acid, β -[[2-[[(3-amino-4-methylphenyl)carbonyl]amino]acetyl]amino]pyridine-3-propanoic acid, as the di-trifluoroacetate salt whose NMR and MS were consistent with the desired product.

5

10

15

Pr paration of (±) β -[[2-[[[3-[[(aminoiminomethyl)-amino]methyl]phenyl]carbonyl]amino]acetyl]amino]-pyridine-3-propanoic acid, bis(trifluoroacetate) salt

Step A

10

3-Cyanobenzoic acid (7.0 g, 0.0476 mole) was added to a round-bottom flask (200 mL) and dissolved in 15 DMF:pyridine (50 mL). To this solution was added disuccinylcarbonate (DSC, 14.6 g, 0.0571 mole) and a catalytic amount of DMAP. Upon cessation of gas evolution, glycine t-butyl ester (9.6 g, 0.057 mole) 20 was added and allowed to react overnight. Triethylamine (10 mL) was added and stirred for several minutes. Volatiles were removed on a rotovap and worked up by dissolving the crude reaction mixture in water and ethyl acetate. The aqueous layer was made 25 acidic by addition of dilute hydrochloric acid, the layers separated, and the water layer discarded. organic layer was washed with saturated aqueous sodium bicarbonate, dried (Na2SO4), and concentrated to obtain a product (11.1 g) whose MS was consistent with the 30 desired, coupled product.

Step B

35

The cyano-t-butyl ester obtained in Step A was reduced to the corresponding benzylamine compound in similar fashion to Example 82, Step D. Thus, cyano-t-butyl ester (10.0 g, 0.0681 mole) was dissolved in acetic acid (about 70 mL) with heating and cooled.

Catalyst was added (0.5 g 3% Pd on carbon) and the reaction transferred t a 6 z Fischer-Porter bottle and pressuriz d with hydr gen (55 psig). Hydrogen was continually added until hydrogen uptake ceased. The catalyst was removed by filtration through celite and the solvent was removed by evaporation to obtain crude benzyl amino t-butyl ester whose MS was consistent with the desired compound.

10 Step C

The Boc group was removed from the product of Step B in a fashion similar to Example 83, Step B to obtain the benzyl amino acid whose MS was consistent with the desired product.

15

Step D

The amino acid (9.0 g, 0.03 mole) obtained in Step C was dissolved in acetonitrile:water (about 1:1) and excess triethylamine added. After several minutes 20 volatiles were removed and crude triethylamine salt obtained. This was re-dissolved in acetonitrile:water (200 mL) and 1H-pyrazine-1-carboxamidine hydrochloride (4.3 g, 0.03 mole) was added and the reaction mixture brought to reflux. After allowing the reaction to 25 reflux overnight the reaction was concentrated to a semisolid. This was dissolved in water (20 mL) and the pH was adjusted to about 7 by addition of solid sodium bicarbonate. A precipitate formed and was removed by filtration. The MS and NMR were consistent with the 30 zwitter-ion. This product was converted to the hydrochloride salt by treating the zwitter-ion with water and adding hydrochloric acid until the pH was about 2. This was lyophilized to obtain the hydrochloride salt.

Step E

The guanidin -acid was obtained by hydr lyzing the product btained in Step D (0.47 g) using the pr cedure of Example 83, Step F. Upon lyophilization a solid is obtained (0.41 g) as the di-TFA salt whose NMR and MS were consistent with the desired product.

Step F

The guanidino-acid prepared in Step E was coupled to 3-amino-3-(3-pyridyl) propionic acid using the procedure of Step A. Preparative RPHPLC was employed to obtain a solid (1.66 g) whose NMR and MS were consistent with the desired product.

25

30

35

Example 86

Preparati n of 3S-[[2-[[[3-[(amin iminomethyl)amino]-phenyl]carbonyl]amino]acetyl]amino]-4-hydroxybutanoic acid

Step A

Preparation of 3-N-t-Boc-amino-4-hydroxy-butyric acid benzyl ester.

N-t-Boc aspartic acid, alpha-benzyl ester (10.0 mmol) was dissolved in THF (10 mL) and added dropwise over a period of 30 minutes to a 0°C solution of BH₃-THF (20 mL, 20.0 mmol), under N₂. After the mixture was stirred for an additional 1-2 hours at 0°C, the reaction was quenched with a solution of 10% AcoH in MeOH (10 mL), and the solvent evaporated. The residue was dissolved in EtoAc and extracted with 1N HCl, H₂O, and 1 M NH₄HCO₃. After being dried over MgSO₄, the product was recovered by removal of the solvent in vacuo. MS was consistent with the desired product.

Step B

Preparation of N-t-Boc-3-amino-2,3-dihydro-5-oxo-3S-furan.

The 3-N-t-Boc-amino-4-hydroxy-butyric acid benzyl ester (20 g, 64 mmol) was stirred in dichloromethane (200 mL) at 25°C for 16 hours in the presence of a catalytic amount of camphor sulfonic acid. The solvent was removed in vacuo. The crude material was purified by flash chromatography on a bed of silica gel (22 cm x 6 cm of Merck 60 Silicagel) eluted with a gradient of hexane/ethyl acetate (90/10 to 70/30; 200 mL/min flow

rate). The pur N-t-Boc-3-aminolact ne was isolated as a white solid (5.4 g) whose MS was c nsistent with the desired compound.

5 Step C

Preparation of 3-amino-2,3-dihydro-5-oxo-3S-furan hydrochloride.

The 3-N-t-Boc amino lactone (5.0 g, 25 mmol) isolated in Step B was dissolved in 4N HCl dioxane (20 mL). After stirring 45 minutes at 25°C, 4N HCl dioxane solution (10 mL) was added and after 1 hour at 25°C, the excess HCl was removed in vacuo. The resulting solution deposited crystals upon standing. The white crystalline material was filtered and dried (2.9 g); HN NMR (DMSO -d₆) & 2.55 (dd, 1H, J1 = 18.3 Hz, J2 = 2.5 Hz), 3.0 (dd, 1H, J1 = 8.5 Hz, J2 = 18.3 Hz), 4.1 (m, 1H), 4.35 (dd, 1H, J1 = 10.5 Hz, J2 = 2.7 Hz), 4.5 (dd, 1H, J1 = 10.5 Hz, J2 = 6.5 Hz), MS (FAB) 102.1 (M+H+).

20 Step D

25

30

35

3-amino-2,3-dihydro-5-oxo-3S-furan hydrochloride was coupled to meta-guanidino-hippuric acid hydrochloride (GIHA) using the following procedure. GIHA (1.6 g, 5.9 mmole) in DMF (about 30 mLs) was added an equivalent of NMM (0.59 g, 0.64 mL, 5.82 mmole) and the mixture allowed to stir for several minutes until a precipitate formed. The mixture was cooled to 0°C and an equivalent of DSC (1.49 g, 5.82 mmole) and a catalytic amount of DMAP were added and the reaction allowed to proceed for at least 0.5 hour. substantially complete activation 3-amino-5-oxo-3Sfuran hydrochloride (0.8 g, 5.82 mmole) was added to the reaction mixture followed by an equivalent of NMM (0.59 g, 0.64 mL, 5.82 mmole) and the reaction allowed to proceed to completion (1-16 hours). The volatiles were removed (vacuum rotary evaporation at 60°C) and the r sidu dissolved in a minimum am unt f

water:acetonitrile (using the minimum am unt of acetonitril to effect solution). The solution was br ught to pH of about 3 by addition of neat TFA and isolation of desired coupled product was achieved by preparative RPHPLC to obtain the mono TFA salt as a hygroscopic solid after lyophilization (0.54 g).

Step E

15

The title compound was obtained by dissolving the product from Step D (0.54 g) in water (20 mL). 10 of the solution was brought to about 11 by addition of dilute aqueous NaOH. Upon completion of the reaction, as determined by analytical RPHPLC, the solution (final pH about 8) was lyophilized. The product's identity was confirmed by proton NMR and MS.

- 212 -

Example 87

Preparati n of (±) sodium β -[[2-[[[3-[(aminoiminomethyl)amin]phenyl]carbonyl]amino]acetyl]-amino]-2-hydroxybenzenepropanoate, sodium salt, trifluoroacetate salt

15 3-Amino-hydrocoumarin hydrochloride (2.0 g, 0.010 mole), prepared according to J. Rico, Tett. Let., 1994, 35, 6599-6602, was coupled to GIHA (1.50 g, 0.0041 mole) using substantially the procedure of Example 86, Step D. Purification by preparative RPHPLC gave the desired product as a mixture of coumarin and hydroxy-20 acid TFA salts as a light yellow powder after lyophilization (1.50 g). Essentially complete conversion to the desired phenol-acid was obtained by dissolving the purified mixture in water, adjusting the pH to 7-8 with dilute aqueous NaOH, and lyophilizing. 25 MS and proton NMR were consistent with the phenol-acid (carboxylate) form of the molecule (as the trifluoroacetate, sodium salt).

10

20

Example 88

Preparation $f(\pm)$ β -[[2-[[[3-[(amin iminomethyl)-amino]phenyl]carbonyl]amino]acetyl]amino]-2-hydroxy-5-methylbenzenepropanoic acid, trifluoroacetate salt

3-Amino-6-methylhydrocoumarin, prepared according to the reference cited in Example 87, was coupled to GIHA using amounts, conditions, and purification similar to Example 87 to obtain a tan solid (0.76 g) whose NMR and MS were consistent with the desired product (as the TFA, sodium salt).

Preparation of (±) 3-[[2-[[[3-[(aminoimin methyl)-amino]phenyl]carbonyl]amino]acetyl]amino]-4-[(2-hydroxyethyl)amino]-4-oxobutanoic acid, trifluoroacetate salt

15 <u>Step A</u>

20

25

30

35

10

N-t-Boc aspartic acid, alpha-benzyl ester (7.7 mmol, 2.50 g) was dissolved in DMF: pyridine (1:1, 70 mL) and DSC (8.5 mmol, 2.2 g) was added together with a catalytic amount of DMAP. After cessation of gas evolution (about 1 hour), ethanol amine (0.52 g, 8.3 mmol) in pyridine (20 mL) was added and allowed to react at room temperature overnight. Volatiles were removed to obtain a golden oil. The resulting product was partitioned between EtOAc and aqueous HCl. The organic layer was washed with saturated aqueous sodium bicarbonate solution, water, dried (anhydrous sodium sulfate) and volatiles removed to obtain a golden oil (2.64 g) whose proton NMR and mass spectra correspond to the desired protected amide.

Step B

benzylated using standard procedures. Thus, the

10 product from Step A was taken up in acetic acid (about

70 mL) transferred to a Fischer-Porter pressure bottle

and 3t palladium on carbon (1 g) and hydrogen added (54

psig). The reaction was vigorously stirred and

hydrogen replenished as needed. After no further

15 hydrogen uptake (about 1 hour) the catalyst was removed

by filtration through a celite pad and volatiles

removed to obtain a colorless oil (1.73 g). Proton NMR

and MS were consistent with the desired de-benzylated

product.

20

5

Step C

25

30

35

The crude product obtained in Step B was dissolved in dioxane (20 mL) and to this was added 4N HCl in dioxane (40 mL) with vigorous stirring. The reaction was allowed to proceed until gas evolution ceased (about 15 minutes). The volatiles were removed and a golden oil was obtained which was triturated with diethyl ether. Proton NMR and mass spectra were consistent with the desired N-deprotected, amino acid product.

Step D

Th product of Step C (1.0 gm, 4.7 mm 1) was coupled t GIHA (1.5 g, 4.11 mmol) using a pr cedure similar t that of Exampl 86, Step D. The crude coupling reaction was concentrated to a thick oil and 5 reconstituted in water:acetonitrile, and purified by preparative RPHPLC to obtain the desired (±) 3-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]-4-[(2-hydroxyethyl)amino]-4-oxobutanoic acid, trifluoroacetate salt (0.44 g after lyophilization). Proton NMR and mass spectra were consistent with the desired product.

Preparation of 2S-[[2-[[[3-[[aminoimin methyl]-amino]phenyl]carbonyl]amin]acetyl]amino]-3-carboxypropyl 2-aminobenzoate, bis(trifluoroacetate) salt, monohydrate

15

Step A

Preparation of Benzyl-3-N-tBoc-amino-4-hydroxy-(3s)-butyrate

N-tBoc-L-aspartic acid, β -benzyl ester (Sigma) (75 20 g, 20 mmol) was dissolved in THF (30 ml) and added dropwise over a period of 30 minutes to BH3-THF (400 ml, 40 mmol) at 0°C under a N2 atmosphere. After the solution was stirred for 2.5 hours at 0°C, the reaction 25 was quenched with 50 ml solution of 10% acetic acid in MeOH, and the solvent was evaporated. The residue was dissolved in ether (200 ml) and washed with 1N HCl, saturated K2CO3, water and dried over MgSO4. The product was isolated by removal of the solvent in vacuo (mp 56-57°C from isopropyl ether/hexane). ^{1}H -NMR (d_{δ} -DMSO) δ 30 1.4 (s, 9H), 2.68 (d, 2H, J = 6 Hz), 3.82 (d, 2H, J = 5Hz), 4.01 (m, 1H), 5.16 (s, 2H), 5.21 (bs, 1H), 7.37 (bs, 5H).

Step B

Preparati n of benzyl-3-amin -4-(anthranilate)-(3S)-butyrate

Benzyl-3-N-tBoc-amino-4-hydroxy-(3S)-butyrate (10 5 g, 32 mmol) was dissolved in 50 ml of dimethylformamide followed by triethylamine (4.4 g, 46 mmol). Isatoic anhydride (5.0 g, 3 mmol) was added and the solution was stirred for 24 hours at 25°C. After the reaction (monitored by reverse phase HPLC) was complete, water 10 was added and the product extracted with ethyl acetate (100 mL) and dried over Na2SO4. Solvent evaporation resulted in 12 g of a yellow oil. To this oil, dioxane (20 mL) was added followed by 4N HCl in dioxane (20 mL). The reaction was left to proceed for 4 hours, 15 ether was added and an oily mass separated from the solution. Ether was again added to the oily mass and decanted. This procedure was repeated two times. Ether was added to the semi solid and stirred vigorously for 16 hours. A white solid was collected 20 having MS and 1H-NMR consistent with the proposed structure.

Step C

N,N'-Disuccinimidylcarbonate (DSC) (1.4 g, 0.5 mmol) was added to GIHA (1.0 g, 0.5 mmol) in dry dimethylformamide (20 mL) followed by dimethylaminopyridine (100 mg). After a period of 1 hour benzyl-3-amino-4-anthranilate-(3S)-butyrate (0.7 g, 0.5 mmol) in DMF/NMM (1:1) (5.0 mL) was added in one portion. The product was purified by reverse phase chromatography (water/acetonitrile) to result in a white solid (1.0 g). MS, and H-NMR were consistent with proposed structure.

Step D

The benzyl ester from Step C was hydrogenated using H₂ gas and catalytic Pd/C (500 mg, 5%) for 4 hours. After c mplete reacti n th product was purified by reverse phase chromatography (water/acetonitrile) to result in a white solid (1.0 g). MS and ¹H-NMR were consistent with the proposed structure.

Pr paration of β -[[2-[[[3-[(aminoiminomethyl)amin]-phenyl]carbonyl]amino]acetyl]amino]-1,4-benzodioxin-6-propanoic acid, trifluoroacetate salt

15

20

25

30

35

10

5

Step A

To 1,4-benzodioxan-6-carboxaldehyde (Aldrich) (10 g) in isopropanol (205 mL) was added ammonium acetate (12.5 g) followed by malonic acid (6.0 g). The reaction mixture was stirred at reflux for 5 hours. The reaction mixture was filtered hot and washed with hot isopropanol (100 mL). The resulting white solid was dried to give DL-3-amino-3-(1,4-benzodioxane) propionic acid (6.3 g) as a white solid. MS, and H-NMR were consistent with the proposed structure.

Step B

DL-3-amino-3-(1,4-benzodioxane) propionic acid (6 g) from Step A was slurried in absolute EtOH (250 mL) and acetyl chloride (20 mL). The slurry was then heated at reflux for 4 hours. The reaction mixture was cooled to 25°C and the solvent evaporated under reduced pressure to give a solid which was washed with ethyl ether (50 mL) to give DL-ethyl-3-amino-3-(1,4-benzodioxane) propionate (6.5 g) as a white solid. MS and ¹H-NMR were consistent with proposed structure.

Step C

N,N'-Disuccinimidyl carb nate (DSC) (1.4 g, 0.5 mmol) was add d to GIHA (1.0 g, 0.5 mmol) in dry dimethylf rmamide (20 mL) followed by

5 dimethylaminopyridine (100 mg). After a period of 1 hour the product from Step B (0.7 g, 0.5 mmol) in DMF/NMM (1:1) (5.0 mL) was added in one portion. After complete reaction the product was purified by reverse phase chromatography (water/acetonitrile) to result in a white solid (1.1 g). MS and H-NMR were consistent with the proposed structure.

Step D

DL-ethyl-3-amino-3-(1,4-benzodioxane) propionate

adduct (the product from Step C) (500 mg) was dissolved in water/acetonitrile (1:1), followed by the addition of lithium hydroxide (100 mg). The reaction mixture was stirred at 25°C, and monitored by HPLC. After complete hydrolysis (1-2 hours) trifluoroacetic acid was added until pH=2. The product was purified by reverse phase chromatography (water/acetonitrile) to result in 255 mg of a white solid. MS and 'H-NMR were consistent with the proposed structure.

Preparati n of N-[2-[[[3-[(aminoiminomethyl)amino]-phenyl]carbonyl]amino]acetyl]- β -alanine, ethyl ester

5

10

15

20

N,N'-Disuccinimidyl carbonate (DSC) (1.4 g, 0.5 mmol) was added to GIHA (1.0 g, 0.5 mmol) in dry dimethylformamide (20 mL) followed by dimethylaminopyridine (100 mg). After a period of 1 hour beta-alanine ethyl ester hydrochloride (0.7 g, 0.5 mmol) in DMF/NMM (1:1) (5.0 mL) was added in one portion. The product was purified by reverse phase chromatography (water/acetonitrile) to result in 1.1 mg of a white solid. MS and 'H-NMR were consistent with proposed structure.

Example 104

Preparation of ethyl β -[[2-[[(3-nitrophenyl)-carbonyl]amin]acetyl]amino]pyridine-3-pr panoate

5

10

The same procedure used in the preparation of Example C was followed substituting an equivalent amount of DL-ethyl 3-amino-3-pyridyl propionate for 15 ethyl beta-alanine hydrochloride. N,N'-Disuccinimidyl carbonate (14 g, 5.5 mmol) was added to 3-nitro-benzoyl glycine (10 g, 4.5 mmol) in dry dimethylformamide (30 mL) followed by dimethylaminopyridine (200 mg). After a period of 1 hour DL-ethyl 3-amino-3-(3-pyridyl) 20 propionate dihydrochloride (13 g, 4.6 mmol) in 20% aqueous potassium carbonate (50 mL) was added in one portion. After complete reaction the product was collected by filtration (11.5 g, 80% yield). MS and ¹H-NMR were consistent with the proposed structure. 25

Preparation of ethyl β -[[2-[[[3-[[[(phenylmethyl)-amin]carbonyl]amino]phenyl]carbonyl]amino]acetyl]-amino]pyridine-3-propanoate, trifluoroacetate salt

15

10

5

The product of Example 123 (400 mg, 0.094 mmol) was dissolved in water/acetonitrile (1:1), followed by the addition of lithium hydroxide (100 mg, 0.4 mmol). The reaction mixture was stirred at 25°C, and monitored by HPLC. After complete hydrolysis (1-2 hours) trifluoroacetic acid was added until pH = 2. The product was purified by reverse phase chromatography (water/acetonitrile) and lyophilized to result in a white solid (200 mg). MS and NMR were consistent with the proposed structure.

Example 126

Preparation f β -[[2-[[[3-[[[(4-(aminosulf nyl)-phenylmethyl]amino]carbonyl]amino]phenyl]carbonyl]-amino]acetyl]amino]pyridine-3-propanoic acid, trifluoroacetate salt

Step A

10 To 4-(aminomethyl)-benzenesulfonamide
hydrochloride hydrate (Aldrich) (6 g) in acetonitrile
was added 3-ethoxycarbonyl phenylisocyanate (Lancaster)
(5 g) and triethylamine (5 ml). The reaction was
stirred for 1 hour. The solvent was removed under
15 reduced pressure to give a solid mass. Water was added
and the solid filtered (10.2 g). MS and H-NMR were
consistent with the proposed structure.

Step B

The compound from Step A (10 g) was dissolved in water/acetonitrile (1:1), followed by the addition of lithium hydroxide (4 g). The reaction mixture was stirred at 25°C, and monitored by HPLC. After complete hydrolysis (4-6 hours) 10% aqueous HCl was added until pH = 2. The product was purified by filtrati n to give

a white solid (7 g). MS and ^{1}H -NMR were c nsistent with the proposed structur .

Step C

M,N'-Disuccinimidyl carbonate (DSC) (1.4 g, 0.5 mmol) was added to the carboxylic acid-urea of 4- (aminomethyl) benzenesulfonamide and 3-ethoxycarbonyl phenylisocyanate (1 g, 0.5 mmol) [See Scheme V(A13)] in dry dimethylformamide (20 mL) followed by dimethylaminopyridine (100 mg). After a period of 1 hour the compound from Example 1, Step C was added (2.2 g, 0.5 mmol) in DMF/NMM (1:1) (5.0 mL) in one portion. After complete reaction the product was purified by reverse phase chromatography (water/acetonitrile) and lyophilized to result in a white solid (1.2 g). MS and 'H-NMR were consistent with the proposed structure.

Step D

The compound from Step C (600 mg) was dissolved in water/acetonitrile (1:1), followed by the addition of lithium hydroxide (100 mg). The reaction mixture was stirred at 25°C, and monitored by HPLC. After complete hydrolysis (1-2 hours) trifluoroacetic acid was added until pH=2. The product was purified by reverse phase chromatography (water/acetonitrile) and lyophilized to result in 500 mg of a white solid. MS and H-NMR were consistent with the proposed structure.

Preparation f β-[[2-[[[3-[[[(3-pyridinylmethyl)amin]carbonyl]amin]phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoic acid, bis trifluoroacetate
salt

Step A

To 3-pyridinemethylamine (Aldrich) (6 g) in

acetonitrile was added 3-ethoxycarbonyl
phenylisocyanate (Lancaster) (5 g) and triethylamine (5 ml). The reaction was stirred for 1 hour. The solvent
was removed under reduced pressure to give a solid
mass. Water was added and the solid filtered (12 g).

MS and H-NMR were consistent with the proposed
structure.

Step B

The compound from Step A (10 g) was dissolved in

water/acetonitrile (1:1), followed by the addition of
lithium hydroxide (4 g). The reaction mixture was
stirred at 25°C, and monitored by HPLC. After complete
hydrolysis (4-6 hours) 10% aqueous HCl was added until
pH = 2. The product was purified by filtration to give
a white solid (5.6 g). MS and H-NMR were consistent
with the proposed structure.

Step C

N,N'-Disuccinimidyl carbonate (DSC) (1.4 g, 0.5 mmol) was added to the carb xylic acid-urea of 3-pyridine methylamine (Aldrich) and 3-ethoxycarbonyl phenylisocyanate (1 g, 0.5 mmol) [See Scheme V(A13)] in dry dimethylformamide (20 mL) followed by dimethylaminopyridine (100 mg). After a period of 1 hour the compound from Example 1, Step C was added (2.2 g, 0.5 mmol) in DMF/NMM (1:1) (5.0 mL) in one portion.

After complete reaction the product was purified by reverse phase chromatography (water/acetonitrile) and lyophilized to result in a white solid (1.1 g). MS and th-NMR were consistent with the proposed structure.

15 Step D

20

The compound from Step C (500 mg) was dissolved in water/acetonitrile (1:1), followed by the addition of lithium hydroxide (100 mg). The reaction mixture was stirred at 25°C, and monitored by HPLC. After complete hydrolysis (1-2 hours) trifluoroacetic acid was added until pH=2. The product was purified by reverse phase chromatography (water/acetonitrile) and lyophilized to result in 430 mg of a white solid. MS and H-NMR were consistent with the proposed structure.

30

35

Example 129

Pr paration of β -[[2-[[[3-[[[(2-carb xy thyl)amino]-carbonyl]amin]phenyl]carbonyl]amino]acetyl]amino]-pyridine-3-propanoic acid, trifluoroacetate salt

Step A

The compound of Example 104 (1.5 g) was dissolved in ethanol (60 mL) in a Parr jar. Palladium on carbon 5% (500 mg) was added and the mixture was hydrogenated under 50 psi in a Parr apparatus for a period of 1.5 hours. The palladium catalyst was removed by filtration through a plug of celite. The solvent was removed under reduced pressure and the sample dried in vacuo.

Step B

Acetonitrile (5 mL) was added to the crude aniline from Step A followed by ethyl isocyanatopropionate (Aldrich) (800 mg) and stirred for 1 hour. The solvent was removed under reduced pressure to give a solid. Diethyl ether was added and the solid was filtered to give a tan colored solid. The product was purified by reverse phase chromatography (water/acetonitrile) and lyophilized to result in 500 mg of a white solid. MS and H-NMR were consistent with the proposed structure.

10

Step C

The compound from Step B (500 mg) was diss lved in water/acet nitrile (1:1), f llowed by the additin f lithium hydr xid (100 mg). The reaction mixture was stirred at 25°C, and monitored by HPLC. After complete hydrolysis (1-2 hours) trifluoroacetic acid was added until pH=2. The product was purified by reverse phase chromatography (water/acetonitrile) and lyophilized to result in 220 mg of a white solid. MS and ¹H-NMR were consistent with the proposed structure.

Example 130

Preparation of β -[[2-[[[3-[[[(2-phenylethyl)amino]-carbonyl]amin]phenyl]carbonyl]amin]acetyl]amino]-pyridine-3-propanoic acid, trifluoroacetate salt

Step A

To phenylethylamine hydrochloride (Aldrich) (6 g)

in acetonitrile was added 3-ethoxycarbonyl
phenylisocyanate (Lancaster) (5 g) and triethylamine (5 ml). The reaction was stirred for 1 hour. The solvent
was removed under reduced pressure to give a solid
mass. Water was added and the solid filtered (11 g).

MS and H-NMR were consistent with the proposed
structure.

Step B

The compound from Step A (10 g) was dissolved in

water/acetonitrile (1:1), followed by the addition of
lithium hydroxide (4 g). The reaction mixture was
stirred at 25°C, and monitored by HPLC. After complete
hydrolysis (4-6 hours) 10% aqueous HCl was added until
pH = 2. The product was purified by filtration to give
a white solid (5.6 g). MS and H-NMR were consistent
with the proposed structure.

Step C

N,N'-Disuccinimidyl carbonate (DSC) (1.4 g, 0.5 mmol) was added to the carboxylic acid-urea of phenylethylamine and 3-ethoxycarbonyl phenylisocyanate (1 g, 0.5 mmol) [See Scheme V(A13)] in dry dimethylformamide (20 mL) followed by dimethylaminopyridine (100 mg). After a period of 1 hour the compound from Example 1, Step C was added (2.2 g, 0.5 mmol) in DMF/NMM (1:1) (5.0 mL) in one portion.

After complete reaction the product was purified by reverse phase chromatography (water/acetonitrile) and lyophilized to result in a white solid (1.0 g). MS and H-NMR were consistent with the proposed structure.

15 Step D

20

The compound from Step C (800 mg) was dissolved in water/acetonitrile (1:1), followed by the addition of lithium hydroxide (100 mg). The reaction mixture was stirred at 25°C, and monitored by HPLC. After complete hydrolysis (1-2 hours) trifluoroacetic acid was added until pH=2. The product was purified by reverse phase chromatography (water/acetonitrile) and lyophilized to result in 633 mg of a white solid. MS and H-NMR were consistent with the proposed structure.

Example 131

Preparation of β -[[2-[[[3-[[[(1-naphthalenylmethyl)-amino]carbonyl]amin]phenyl]carbonyl]amino]ac tyl]-amino]pyridine-3-propanoic acid, trifluoroacetate salt

Step A

To 1-naphthalene methylamine (Aldrich) (5 g) in

20 acetonitrile was added 3-ethoxycarbonyl
phenylisocyanate (Lancaster) (5 g) and triethylamine (5
ml). The reaction was stirred for 1 hour. The solvent
was removed under reduced pressure to give a solid
mass. Water was added and the solid filtered (9 g).

25 MS and H-NMR were consistent with the proposed
structure.

Step B

30

35

The compound from Step A (8 g) was dissolved in water/acetonitrile (1:1), followed by the addition of lithium hydroxide (3 g). The reaction mixture was stirred at 25°C, and monitored by HPLC. After complete hydrolysis (4-6 hours) 10% aqueous HCl was added until pH = 2. The product was purified by filtration to give a white solid (5.6 g). MS and H-NMR were consistent with the proposed structure.

Step C

N,N'-Disuccinimidyl carbonate (DSC) (1.4 g, 0.5 mm l) was add d to the carboxylic acid-urea of 1-naphthalene methylamine and 3-ethoxycarbonyl phenylisocyanate (1 g, 0.5 mmol) [See Scheme V(A13)] in dry dimethylformamide (20 mL) followed by dimethylaminopyridine (100 mg). After a period of 1 hour the compound from Example 1, Step C was added (2.2 g, 0.5 mmol) in DMF/NMM (1:1) (5.0 mL) in one portion. After complete reaction the product was purified by reverse phase chromatography (water/acetonitrile) and lyophilized to result in a white solid (1.0 g). MS and lh-NMR were consistent with the proposed structure.

15 Step D

20

The compound from Step C (600 mg) was dissolved in water/acetonitrile (1:1), followed by the addition of lithium hydroxide (100 mg). The reaction mixture was stirred at 25°C, and monitored by HPLC. After complete hydrolysis (1-2 hours) trifluoroacetic acid was added until pH=2. The product was purified by reverse phase chromatography (water/acetonitrile) and lyophilized to result in 410 mg of a white solid. MS and ¹H-NMR were consistent with the proposed structure.

Preparati n f phenylmethyl β -[[2-[[[3-[[(cyan imin)-phenylmethylamino)methyl]amino]phenyl]carbonyl]amin]-acetyl]amino]benzenepr pan ate

10

15

20

25

To a stirred solution of the product of Example I (140 mg, 0.52 mM), in methylene chloride (25 ml) at 0°, triethylamine, (0.5 ml), DMAP (10 mg), EDC1 (95 mg) and the compound from Example V (215 mg, 0.52 mM) were The reaction mixture was stirred at 0°C for 15 added. minutes, allowed to attain room temperature and then stirred for another 16 hours. The reaction mixture was concentrated in vacuo to afford an oily gum which was dissolved in ethyl acetate. The resulting solution was washed with water, saturated aqueous NaHCO, and water. The organic layer was separated, dried (Na2SO4) and evaporated to afford the crude product. The crude product was further purified by chromatography on silica (eluant:ethyl acetate) and excess solvent removed to afford the title compound (88 mg) as a clear oil.

NMR and MS were consistent with the proposed structure.

30

10

Example 133

Pr parati n of phenylmethyl β -[[2-[[[3-[[(cyan imin)-methylamino)m thyl]amino]phenyl]carbonyl]amino]-acetyl]amino]benzenepropanoate

To a stirred solution of the product of Example J (90 mg, 0.41 mM), in methylene chloride (25 ml) at 0° , 15 triathylamine, (0.5 ml), DMAP (10 mg), EDC1 (95 mg) and the compound from Example V (215 mg, 0.52 mM) were added. The reaction mixture was stirred at 0°C for 15 minutes, allowed to attain room temperature and then stirred for another 16 hours. The reaction mixture was 20 concentrated in vacuo to afford an oily gum which was dissolved in ethyl acetate. The resulting solution was washed with water, saturated NaHCO, and finally water again. The organic layer was separated, dried (Na2SO4) and evaporated to afford the crude product. The crude 25 product was further purified by chromatography on silica (eluant:ethyl acetate) and excess solvent removed to afford the title compound (80 mg) as a clear oil.

Example 134

Preparation f phenylmethyl β -[[2-[[[3-[[(cyanoimino)-(amino)methyl]amino]phenyl]carbonyl]amino]acetyl]-amino]benzenepropanoate

15 To a stirred solution of the product of Example K (212 mg, 1.0 mM), in methylene chloride (25 ml) at 0°, triethylamine, (0.5 ml), DMAP (10 mg), EDC1 (95 mg) and the compound from Example V (215 mg, 0.52 mM) were added. The reaction mixture was stirred at 0°C for 15 20 minutes, allowed to attain room temperature and then stirred for another 16 hours. The reaction mixture was concentrated in vacuo to afford an oily gum which was dissolved in ethyl acetate. The resulting solution was washed with water, saturated NaHCO, and again with water. The organic layer was separated, dried (Na2SO4) 25 and evaporated to afford the crude product. The crude product was further purified by chromatography on silica (eluant:ethyl acetate) and excess solvent removed to afford the title compound (285 mg) as a 30 clear oil.

Preparation of ethyl β -[[2-[[[3-[[(cyan imino)-(ethylamin)methyl]amin]phenyl]carbonyl]amino]acetyl]-amino]benzenepropanoate

10

5

To a stirred solution of the product of Example L (464 mg, 2.0 mM), DL ethyl β -[(2-amino-1oxoethyl)amino]phenyl-3-propanoate (728 mg, 2.0 mM) 15 [prepared according to Example 1 (Step B, C and D) replacing DL-3-amino-3-(3-pyridyl) propionic acid with an equivalent amount of DL-3-amino-3-(3phenyl)propionic acid], triethylamine (2.0 ml)and DMAP (20 mg) in methylene chloride (15 ml) at 0°C, EDCl (191 20 mg) was added. The reaction mixture was stirred at 0°C for 15 minutes, allowed to attain room temperature and then stirred for another 16 hours. The reaction mixture was concentrated in vacuo to afford an oily gum which was dissolved in ethyl acetate. The resulting 25 solution was washed with water, saturated NaHCO3 and water. The organic layer was separated, dried (Na2SO4) and evaporated to afford the crude product. The crude product was further purified by reverse phase HPLC on a 30 C18 column (eluant: 0.5% TFA-water/ acetonitrile) to afford the title compound (280 mg) as a white solid.

EXAMPLE AA

Preparation of

5

CN HOOCH3

10

The above compound was prepared following the procedure described in Example E, replacing benzylamine with p-aminomethyl benzenesulfonamide. The above compound was obtained as a white solid.

NMR was consistent with the proposed structure.

EXAMPLE AB

20

Preparation of

25

The above compound was prepared following the procedure described in Example I, replacing the compound of Example E with the compound of Example R. The above compound was obtained as a white solid.

EXAMPLE AC

Preparation of

5

10

15

The above compound was prepared following the procedure described in Example 140, replacing the compound of Example J with N-t-Boc glycine and replacing DL ethyl β -[(2-amino-1-oxoethyl)amino]-4-pentynoate with ethyl-DL-3-amino-3-(3,5-dichlorophenyl)propionate. The above compound was obtained as an oily gum.

NMR was consistent with the proposed structure.

EXAMPLE AD

20

Preparation of

25

30

The above compound was prepared following the procedure described in Example 161, replacing the compound of Example 159 with that of Example AC. The above compound was obtained as an oily gum.

10

15

20

EXAMPLE 157

Preparation of ethyl 3S-[[2-[[[3-[[[(4-(aminosulf nyl)phenylmethyl]amin](cyanoimino)-methyl]amin]phenyl]carbonyl]amino]acetyl]-amino-4-pentynoate

The title compound was prepared following the procedure described in Example 140, replacing the compound of Example J with that of Example AA. The above compound was obtained as an oily gum.

30

EXAMPLE 158

Preparation f 3S-[[2-[[[3-[[[(4-(aminosulfonyl)-phenylmethyl]amino](cyanoimino)methyl]amino]phenyl]-carbonyl]amino]acetyl]amino]-4-pentynoic acid, trifluoroacetate salt, monohydrate

The above compound was prepared following the
procedure described in Example 141, replacing the compound
of Example 140 with that of Example 157. The crude
product was purified by RPHPLC on a C18 column (eluant:
0.5% TFA-water/acetonitrile) and lyophilized to afford the
title compound as a white solid.

NMR was consistent with the proposed structure.

Analysis for C21H21N7O4S.1.25 TFA

Calculated: C, 44.64; H, 3.86; N, 14.29.

Found: C, 44.85; H, 4.00; N, 14.36.

EXAMPLE 159

Preparati n f ethyl β-[[2-[[[3-[[amin (cyanoimino)-methyl]amino]phenyl]carbonyl]amin]acetyl]amino]-3,5-dichlorobenzenepropanoate

The title compound was prepared following the procedure described in Example 140, replacing the compound of Example J with that of Example K and replacing DL ethyl-β-[(2-amino-1-oxoethyl)amino]-4-pentynoate with compound of Example AD. The title compound was obtained as an oily gum.

10

15

20

EXAMPLE 160

Preparati n of β -[[2-[[[3-[[amin (cyan imin)methyl]-amino]phenyl]carbonyl]amino]acetyl]amino]-3,5-dichlorobenzenepropanoic acid

The title compound was prepared following the procedure described in Example 141, replacing the compound of Example 140 with that of Example 159. The crude product was purified by RHPLC on a C-18 column (eluant: 0.5% TFA/water/acetonitrile) and lyophilized to afford the title compound as a white solid.

20

- 298 -

EXAMPLE 161

Preparati n f ethyl β-[2-[[[3-[[amino(amin carbonyl)imino]methyl]amin]phenyl]carbonyl]amino]acetyl]amino]-3,5-dichlorobenzenepropanoate,
trifluoroacetate salt

To a stirred solution of Example 159 (2.65 g) in methylene chloride (120 ml) was added trifluoroacetic acid (60 ml). The reaction mixture was stirred at 25°C for 1 hour. The reaction mixture was concentrated in vacuo to afford crude product which upon crystallization from ether afforded the title compound (2.02 g) as a white solid.

NMR was consistent with the proposed structure.

Analysis for C₁₁H₂₂N₅O₄Cl₃ 1.05 TFA.

EXAMPLE 162

Preparati n f β-[[2-[[[3-[[amin (aminocarbonyl)imino]-methyl]amin]phenyl]carbonyl]amino]acetyl]amino]-3,5-dichlorobenzenepropanoic acid,
trifluoroacetate salt

The title compound was prepared following the procedure described in Example 141, replacing the compound of Example 140 with the compound of Example 161. The title compound was obtained as a white solid.

NMR was consistent with the proposed structure.

Analysis for C20H20N6O5Cl, 1.25 TFA:

Calculated: C, 42.37; H, 3.36; N, 13.18.

Found: C, 42.48; H, 3.46; N, 12.96.

EXAMPLE AE

Preparation of

5

The title compound was prepared following the procedure described in Example 141 except that the compound of Example 140 was replaced with the compound of Example AC. The title compound was obtained as a white solid.

NMR was consistent with the proposed structure.

EXAMPLE AF

Preparation of

20

15

25

30

To a stirred solution of the compound of Example AE (954 mg, 33 mmol), DMF (10 ml), K₂CO₃ (1 g), NaI (129 mg) was added 363 mg of 2-chloro-N,N-dimethylacetamide (363 mg, 3 mmole) and the mixture was stirred at room temperature for 16 hours. The reaction mixture was concentrated in vacuo to afford an oily gum, which upon crystallization from diethylether yielded a white solid (AF) (610 mg).

EXAMPLE AG

Preparati n f

5

10

15

The title compound was prepared following the procedure described in Example 161, replacing the compound of Example 159 with the compound of Example AF. The title compound was obtained as an oily gum.

10

20

EXAMPLE 163

Preparation of [(dimethylamino)carbonyl]methyl β[[2-[[[3-[(amin imin methyl)amin]phenyl]carbonyl]amino]acetyl]amino]-3,5dichlorobenzenepropanoate

The title compound was prepared following the procedure described in Example 132, replacing the compound of Example I with m-guanidino benzoic acid and replacing the compound of Example V with the compound of Example AG. The title compound was obtained as a white solid.

NMR was consistent with the proposed structure.

Analysis for C23H26N6O3Cl2 1.3 TFA:

Calculated: C, 44.85; H, 4.01; N, 12.28

Found: C, 44.51; H, 3.88; N, 12.38.

EXAMPLE AH

Preparation of

5

10

15

To a stirred solution of 2-methyl-2-thiopseudourea sulfate (11.1 g) in methylene chloride (150 ml) was added ethylchloroformate (8 ml) and saturated solution of sodium bicarbonate (150 ml). The reaction mixture was stirred at room temperature for 18 hours. The reaction mixture was washed with water, dried over Na₂SO₄ and concentrated in vacuo to afford a crude oily gum, which upon purification by flash column chromatography afforded the above compound (9.8 g) as a white solid.

EXAMPLE 164

Preparation of

5

10

15

The title compound was prepared following the procedure described in Example 140, replacing the compound of Example J with 3-aminobenzoylglycine and replacing DL ethyl- β [(2-amino-1-oxoethyl)amino]-4-pentynoate with 3-amino-3-(3,5-dichlorophenyl)propionic acid tert-butyl ester. The title compound was obtained as an oily gum.

10

15

20

EXAMPLE 165

Preparation of 1,1-dimethylethyl 3,5-dichl r -β-[[2-[[[3-[[(ethoxycarbonyl)amin][(ethoxycarbonyl)imino]methyl]amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoate

To a stirred solution of the compound of Example AH (250 mg) in DMF (2 ml), and triethylamine (150 mg) was added the compound of Example 164 (150 mg). The mixture was cooled to 0°C and stirred at 0°C for 5 minutes. The mixture was treated with HgCl₂ (50 mg), and stirred at room temperature for 1 hour. The mixture was concentrated in vacuo to afford an oily gum which upon further purification by flash column chromatography yielded an oily gum.

- 306 -

EXAMPLE 166

Preparation of 3,5-dichlor -β-[[2-[[[3-[[[(ethoxycarbonyl)amin][(ethoxycarbonyl)imino]methyl]amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid

The title compound was prepared following the procedure described in Example 160, replacing the compound of Example 159 with the compound of Example 165. The title compound was obtained as a white solid.

NMR was consistent with the proposed structure.

EXAMPLE AI

Preparati n of

To a stirred suspension of 3-amino-4-chlorobenzoic acid (25.0 g, 157 mmol) in MeOH (300 ml) at 0°C, hydrogen chloride gas was added until the methanolic solution was saturated. The reaction mixture was stirred at 0-5°C for 30 minutes, allowed to attain room temperature, and then stirred for a further 4 days. The reaction mixture was concentrated in vacuo and the resulting white solid triturated with diethyl ether to afford the above compound; 26.2 g as a white solid.

NMR was consistent with the proposed structure.

EXAMPLE AJ

20 Preparation of

25

30

To a solution of bis-t-Boc-thiourea (24.8 g, 90 mmol) and methyl 3-amino-4-chlorobenzoate (20 g, 90 mmol) in dimethylformamide (120 ml) and triethylamine (45 ml) at 0°C, mercury (II) chloride (30.1 g, 111 mmol) was added. The reaction mixture was stirred for 15 minutes at 0°C, allowed to attain room temperature and stirred for a further 2 hours. The reaction mixture was diluted with ethyl acetate (600 ml) and the resulting slurry filtered

under reduced pressur. The filtrat was concentrated, to aff rd an oily gum which was purified by chromat graphy on silica (eluent: ethyl acetate/heptane 20:80) to afford the above compound (8.6 g) as a white solid.

NMR was consistent with the proposed structure.

EXAMPLE AK

Preparation of

10

5

15

20

The product of Step AI was dissolved in MeOH (3 mL) and 1 M NaOH (14 mL) was added at room temperature. The reaction was stirred at room temperature for 2 hours. The reaction was concentrated in vacuo and the residue dissolved in water, washed with ether. The aqueous layer was acidified to pH=3 with 1N HCl. A white precipitate formed, was filtered and washed with water and ether and dried to give 1.2 g of white solid.

NMR was consistent with the proposed structure.

- 309 -

EXAMPLE AL

Preparation f

H₂N N CO₂H

10 To a solution of the product of Step AJ (550 mg, 1.33 mmol) in CH₂Cl₂ (4 mL) was added TFA (1 mL) at 0°C. The ice bath was removed after the addition and the reaction was stirred at room temperature for 2 hours. The reaction was concentrated in vacuo to give a colorless oil. To this was added 4N HCl solution in dioxane (2 mL) and white precipitate formed. The solution was concentrated in vacuo to afford 280 mg of the desired product as a white solid.

10

30

EXAMPLE 167

Preparation of ethyl β -[[2-[[[3-[(amin iminomethyl)-amino]-4-chlorophenyl]carbonyl]amin]acetyl]-amino]3,5-dichlorobenzenepropanoate

A solution of the compound of Example AL (500 mg) and 15 1-methylpiperidine (400 mg), in DMF (20 ml) was cooled to 0°C and isobutyl chloroformate (274 mg) was added under a nitrogen atmosphere. The reaction mixture was allowed to stir for 5 minutes before adding a solution of the 20 compound of Example AD (866 mg) in DMF (2 ml). reaction mixture was allowed to warm slowly to room temperature and was stirred at room temperature for 16 hours. The solution was quenched with water and extracted with ethyl acetate. The organic extracts were washed with water, dried over Na2SO4 and concentrated in vacuo. The 25 residue was purified by RPHPLC and lyophilized to yield the desired product as an oily gum (329 mg).

15

EXAMPLE 174

Preparation f (±) thyl β -[[2-[[[3-[(aminoiminomethyl)-amino]phenyl]carbonyl]amin]acetyl]amin]-3,4-dichlorobenzenepropanoate, trifluoroacetate salt

Ethyl-DL-3-amino-3-(3,4-dichlorophenyl) propionate hydrochloride was prepared according to Example 1, Steps A and B, substituting an equivalent amount of 3,4-dichlorobenzaldehyde (Aldrich) for 3-pyridinecarboxaldehyde in Example 1, Step A.

Step B

Step A

To m-guanidinohippuric acid hydrochloride (Example M) 20 (400 mg, 0.0015 mole) and N-methylmorpholine (150 mg, 0.0015 mole) in anhydrous DMF (6 mL) was added, at ice bath temperature, isobutylchloroformate (200 mg, 0.0015 mole). After stirring for 5 minutes, a slurry of the product from Step A above (ethyl-DL-3-amino-3-(3,4-25 dichlorophenyl) propionate hydrochloride (440 mg, 0.0015 mole) and N-methylmorpholine (150 mg, 0.0015 mole) in anhydrous DMF (6 mL) was added in one portion at ice bath temperature. The reaction was stirred overnight at room 30 temperature. The solvent was removed under vacuum on a 78°C water bath and the product was isolated by RPHPLC to yield the title compound (520 mg) as a white solid.

MS and NMR were consistent with the desired structure.

10

EXAMPLE 175

Preparation of (±) β -[[2-[[[3-[(amin iminom thyl)amino]-phenyl]carbonyl]amino]acetyl]amino]-3,4-dichlorobenzene-propanoic acid, trifluoroacetate salt

To the product from Example 174 (420 mg, 0.0007 mole) in H₂O (8 mL) and CH₃CN (8 mL) was added LiOH (118 mg, 0.003 mole). The reaction mixture was stirred at room temperature for 1.5 hours. The pH was lowered to ~3 with TFA and the product was isolated by RPHPLC to yield the title compound (390 mg) (after lyophilization) as a white solid.

MS and NMR were consistent with the desired structure.

10

EXAMPLE 176

Preparation of (±) ethyl β -[[2-[[[3-[(aminoiminomethyl)-amin]-5-(trifluoromethyl)carbonyl]amino]acetyl]amino]-3,4-dichlorobenzenepropanoate, trifluoroacetate salt

The above compound was prepared according to the

methodology of Example 38, substituting the equivalent
amount of 3,5-dichlorobenzaldehyde (Aldrich) for 3,5-bistrifluoromethylbenzaldehyde.

MS and NMR were consistent with the desired structure.

10

EXAMPLE 177

Preparati n f (±) β -[[2-[[[3-[(amin iminomethyl)amin]-5-(triflu romethyl)phenyl]carbonyl]amin]ac tyl]amin]-3,5-dichlorobenzenepropanoic acid, trifluoroacetate salt

To the product from Example 176 (620 mg, 0.00094 mole) in H₂O (10 mL) and CH₃CN (10 mL) was added LiOH (157 mg, 0.0037 mole). The reaction mixture was stirred at room temperature for 2 hours. The pH was lowered to -3 with TFA and the product was isolated by RPHPLC to yield the title compound (560 mg after lyophilization) as a white solid.

MS and NMR were consistent with the desired structure.

10

15

20

EXAMPLE 178

Preparation of (±) ethyl β -[[2-[[[3-[(4,5-dihydro-1H-imidazol-2-yl)amino]phenyl]carbonyl]amino]acetyl]-amino]-3,5-bis(trifluoromethyl)benzenepropanoate, trifluoroacetate salt

The above compound was prepared according to the methodology of Example 9, substituting the equivalent amount of 3,5-bis-trifluoromethylbenzaldehyde (Aldrich) for 3-pyridinecarboxaldehyde in Example 1, Step A from Example 9, Step B.

MS and NMR were consistent with the desired structure.

Pr paration of (\pm) β -[[2-[[[3-[(4,5-dihydr -1H-imidazol-2-yl)amino]ph nyl]carbonyl]amino]acetyl]-amino]-3,5-bis(trifluoromethyl)benzenepropanoic acid, trifluoroacetate salt

15

20

10

5

To the product from Example 190 (200 mg, 0.00032 mole) in H₂O (10 mL) and CH₃CN (10 mL) was added LiOH (54 mg, 0.0013 mole). The reaction mixture was stirred at room temperature for 1.5 hours. The pH was lowered to =2.5 with TFA and the product was isolated by RPHPLC to yield the title product (190 mg after lyophilization) as a white solid.

MS and NMR were consistent with the desired structure.

Preparati n of (±) thyl β -[[2-[[[3-[(aminoiminomethyl)-amino]phenyl]carbonyl]amino]acetyl]amino]-3,5-dimethylbenzenepropanoate, trifluoroacetate salt

The above compound was prepared according to the methodology of Example 174, substituting an equivalent amount of 3,5-dimethylbenzaldehyde (Lancaster) for 3,4-dichlorobenzaldehyde in Example 174, Step A.

MS and NMR were consistent with the desired structure.

5

10

EXAMPLE 193

Preparati n of (±) β -[[2-[[[3-[(amin iminomethyl)-amino]phenyl]carbonyl]amin]acetyl]amin]-3,5-dimethylbenzenepropanoic acid, trifluoroacetate salt

To the product from Example 192 (730 mg, 0.0013 mole) in H₂O (10 mL) and CH₂CN (10 mL) was added LiOH (221 mg, 0.005 mole). The reaction mixture was stirred at room temperature for 1 hour. The pH was lowered to ~2.5 with TFA and the product was isolated by RPHPLC to yield the title compound (570 mg after lyophilization) as a white solid.

Preparation of (±) ethyl β -[[2-[[[3-[(aminoiminomethyl)-amino]phenyl]carbonyl]amino]acetyl]amino]-3,5-dimethoxybenzenepropanoate, trifluoroacetate salt

The above compound was prepared according to the methodology of Example 174, substituting an equivalent amount of 3,5-dimethoxybenzaldehyde (Aldrich) for 3,4-dichlorobenzaldehyde in Example 174, Step A.

MS and NMR were consistent with the desired structure.

10

15

10

EXAMPLE 195

Preparation of (±) β-[[2-[[[3-[(aminoimin methyl)-amin]phenyl]carbonyl]amino]acetyl]amino]-3,5-dimethoxybenzenepropanoic acid, trifluoroacetate salt

To the product from Example 194 (800 mg, 0.00014 mole) in H₂O (20 mL) and CH₃CN (8 mL) was added LiOH (230 mg, 0.0055 mole). The reaction mixture was stirred at room temperature for 1.5 hours. The pH was lowered to -3 with TFA and the product was isolated by RPHPLC to yield the title compound (670 mg after lyophilization) as a white solid.

EXAMPLE 196

Preparati n of (±) (2,2-dimethyl-1-oxoprop xy)m thyl β[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]-3,5-dichlorobenzenepropanoate,
trifluoroacetate salt

Step A

DL-3-amino-3-(3,5-dichlorophenyl) propionic acid was
prepared according to the methodology of Example 1, Step
A, substituting an equivalent amount of 3,5dichlorobenzaldehyde (Aldrich) for 3-pyridine
carboxaldehyde in Example 1, Step A. MS and NMR were
consistent with the desired structure.

Step B

15

To the product from Step A (3.0 g, 0.0128 mole) in dioxane (25 mL) and H₂O (13 mL) was added, at ice-bath temperature, NaOH (0.52 g, 0.013 mole) in H₂O (13 mL).

20 After stirring at ice-bath temperature for 10 minutes, BOC anhydride (3.0 g, 0.014 mole) was added at ice-bath temperature. The reaction mixture was then stirred for 2 hours at room temperature. After the dioxane was removed under vacuum, the aqueous solution was cooled in an ice-bath and the pH was lowered to 2.5 with KHSO₄ after overlaying with ethyl acetate. The ethyl acetate layer was separated and the aqueous layer extracted twice more

with ethyl acetate. The c mbined ethyl acetat layers were washed with H₂O (3X), dried over MgSO₄ and th solvent was rem ved under vacuum. The residu was slurri d in 5% ethyl acetate/hexan overnight resulting in a white solid. This was filtered, washed with 10% ethyl acetate/hexane and dried to yield N-BOC-DL-3-amino-3-(3,5-dichlorophenyl)-propionic acid (2.9 g) as a white solid.

Step C

To the product from Step B (2.5 g, 0.0075 mole) in acetone (30 mL) and H₂O (5 mL) was added KOH (87%) (0.5 g, 0.0075 mole). To this was added chloromethyl pivalate (1.3 g, 0.0084 mole) (Aldrich), followed by NaI (190 mg). The reaction mixture was stirred overnight at reflux. The solvent was removed under vacuum. The residue was taken up in ether. The ether was washed with saturated NaHCO₃ (2X), H₂O (3X), dried over MgSO₄ and removed under vacuum to yield pivaloyloxymethyl N-BOC-DL-3-amino-3-(3,5-dichlorophenyl) propionate (2.92 g) as a white solid. MS and NMR were consistent with the desired structure.

Step D

added excess 4M HCl in dioxane (Aldrich). The reaction

25 mixture was stirred at room temperature overnight. The

solvent was removed under vacuum and the residue was

slurried 2X with petroleum ether/isopropyl ether (50:50)

and 1X with petroleum ether (the solvents are decanted off

each time). The resulting solid was dried under vacuum to

yield pivaloyloxymethyl DL-3-amino-3-(3,5
dichlorophenyl)propionate hydrochloride (2.0 g) as a white

solid. MS and NMR were consistent with the desired

structure.

Step E

The title comp und was pr pared according t the method logy of Example 174, St p B, substituting an equivalent amount of the product fr m Step D above for the product from Example 174, Step A in Example 174, Step B. The title compound was isolated as a white solid. MS and NMR were consistent with the desired structure.

10

15

EXAMPLE 197

Pr paration f (±) ethyl 3,5-dichloro-β-[[2-[[[3-[(cyanoimino)(methylamin)methyl]amino]phenyl]-carbonyl]amino]acetyl]amino]benzenepropanoate

Ethyl β -[(2-aminoacetyl)amino](3,5-dichlorophenyl)-3-propanoate hydrochloride was prepared according to the methodology of Example 1, Steps A-D, substituting an equivalent amount of 3,5-dichlorobenzaldehyde for 3-pyridinecarboxaldehyde in Example 1, Step A. MS and NMR were consistent with the desired structure.

Step B

Step A

20 To the product from Step A above (1.1 g, 0.0031 mole), the product from Example J (680 mg, 0.0031 mole), DMAP (38 mg, 0.00031 mole), triethylamine (320 mg, 0.0031 mole) and methylene chloride (12 mL) was added, at icebath temperature, EDCI (600 mg, 0.0031 mole). The reaction mixture was stirred at ice-bath temperature for 25 15 minutes then at room temperature overnight. removing the solvent under vacuum, the residue was taken up in ethyl acetate. The ethyl acetate was washed with saturated NaHCO3 (1X), H2O (2X), dried over MgSO4 then 30 removed under vacuum. The resulting solid was slurried in ethyl acetate:isopropyl ether (1:3) for 1 hour. resulting solid was filtered, washed with isopropyl ether and dried under vacuum to yield the title compound (1.35 g) as a white solid.

10

EXAMPLE 198

Pr paration f (±) 3,5-dichl ro-β-[[2-[[[3-[(cyanoimino)(methylamino)methyl]amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid

To the product from Example 197, Step B (1.18 g, 0.0023 mole) in H₂O (15 mL) and CH₂CN (15 mL) was added

LiOH (240 mg, 0.0057 mole). The reaction mixture was stirred at room temperature for 3 hours. The pH was lowered to =3 with TFA and the product was isolated by RPHPLC to yield the title compound (1.02 g after lyophilization) as a white solid. MS and NMR were consistent with the desired structure.

10

20

25

30

EXAMPLE 199

Preparati n f (±) ethyl 3,5-dichl r $-\beta$ -[[2-[[[3-[(1,4,5,6-tetrahydropyrimidin-2-yl)amino]phenyl]-carbonyl]amino]acetyl]amino]benzenepropanoate, trifluoroacetate salt

15 Step A

To the product from Example 23, Step A (10.1 g, 0.03 mole) in DMF (15 mL) was added 1,3-diaminopropane (2.3 g, 0.031 mole), triethylamine (3.9 g, 0.03 mole) and DMAP (420 mg). The reaction mixture was heated at 140-150°C for 4.5 hours (thick precipitate). After cooling to room temperature, H₂O (30 mL) was added and, after stirring for 15 minutes, the precipitate was filtered and washed with H₂O. This precipitate was slurried in H₂O and made acidic with concentrated HCl. A solution formed. After lyophilizing off the solvent, the residue was slurried 2X with isopropyl ether (which was decanted off each time). After drying under vacuum, the yield of 3-(2-amino-1,4,5,6-tetrahydropyrimidine) benzoic acid hydrochloride was 4.0 g as a white solid. MS and NMR were consistent with the desired structure.

Step B

To the product from Step A above (884 mg, 0.0035 m le) and NMM (350 mg, 0.0035 mole) in anhydr us DMF (6 mL) was add d, at ic -bath temperature,

5 isobutylchloroformate (470 mg, 0.0035 mole). After stirring for 5 minutes, a slurry of the product from Example 197, Step A (1.07 g, 0.003 mole) and NMM (300 mg, 0.003 mole) in anhydrous DMF (6 mL) was added at ice-bath temperature. The solution was stirred overnight at room temperature. The solvent was removed under vacuum and the product was isolated by RPHPLC to yield the title compound (820 mg after lyophilization) as a white solid. MS and NMR were consistent with the desired structure.

Pr parati n f (±) 3,5-dichl ro-β-[[2-[[[3-[(1,4,5,6-t trahydr pyrimidin-2-yl)amin]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid, trifluoroacetate salt

15

20

10

5

To the product from Example 199, Step B (780 mg, 0.0012 mole) in H₂O (10 mL) and CH₂CN (10 mL) was added LiOH (830 mg, 0.005 mole). The reaction mixture was stirred at room temperature for 1.5 hours. The pH was lowered to -2.5 with TFA and the product was isolated by RPHPLC to yield the title compound (560 mg after lyophilization) as a white solid. MS and NMR were consistent with the desired structure.

10

EXAMPLE 201

Preparation of (±) β-[[2-[[[3-[[[(aminocarbonyl)imino)methylamin)methyl]amino]phenyl]carbonyl]amino]acetyl]amino]-3,5dichlorobenzenepropanoic acid

To the product from Example 198 (300 mg, 0.0006 mole)

in CH₃CN (10 mL) and H₂O (25 mL) was added TFA (6 mL). The
reaction mixture was stirred at room temperature for 2
weeks. The product was isolated by RPHPLC to yield the
title compound (290 mg after lyophilization) as a white
solid.

20

EXAMPLE 202

Pr paration f (±) ethyl β -[[2-[[[3-[(3,4-dihydr -2H-pyrrol-5-yl)amino]phenyl]carbonyl]amino]acetyl]-amino]-3,5-dichlorobenzenepropanoate, trifluoroacetate salt

The above compound was prepared according to the methodology of Example 16, substituting an equivalent amount of 3,5-dichlorobenzaldehyde (Aldrich) for 3-pyridine carboxaldehyde in Example 1, Step A, which was used to synthesize the product from Example 1, Step D, used in Example 11, Step B. MS and NMR were consistent with the desired structure.

Preparati n f (±) β-[[2-[[[3-[(3,4-dihydro-2H-pyrrol-5-yl)amino]phenyl]carbonyl]amino]acetyl]amino]-3,5-dichlorobenzenepropanoic
acid, trifluoroacetate salt

15

20

10

5

To the product from Example 202 (1.27 g, 0.002 mole) in $\rm H_2O$ (15 mL) and $\rm CH_3CN$ (15 mL) was added LiOH (345 mg, 0.0082 mole). The reaction mixture was stirred at room temperature for 1.5 hours. The pH was lowered to 2.7 with TFA and the product was isolated by RPHPLC to yield the title compound (80 mg after lyophilization) as a white solid. MS and NMR were consistent with the desired structure.

25

30

EXAMPLE 204

Preparati n of (±) ethyl 3,5-dichloro-β-[[2-[[[3-[(2,3,4,5-tetrahydropyridin-6-yl)amino]phenyl]-carbonyl]amino]acetyl]amino]benzenepropanoate, trifluoroacetate salt

15 Step A

To 0-methylvalerolactim (Oakwood) (6.9 g, 0.061 mole) in CH₃CN (75 mL) was added 3-aminobenzoic acid, hydrochloride (Aldrich) (10 g, 0.0576 mole). After briefly heating to form a solution, the reaction mixture was stirred overnight at room temperature. The resulting precipitate was filtered, washed with CH₃CN and dried under vacuum to yield 3-(1-aza-2-amino-1-cyclohexene) benzoic acid hydrochloride (12.2 g) as a white solid. MS and NMR were consistent with the desired structure.

Step B

The title compound was prepared according to the methodology of Example 199, substituting an equivalent amount of the product from Step A above, for the product from Example 199, Step A in Example 199, Step B.

Preparation of (±) 3,5-dichloro-β-[[2-[[[3-[(2,3,4,5-tetrahydropyridin-6-yl)amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid, trifluoroacetate salt

15

10

5

To the product from Example 204, Step B (890 mg, 0.0014 mole) in H₂O (20 mL) and CH₃CN (20 mL) was added LiOH (236 mg, 0.0056 mole). The reaction mixture was stirred at room temperature for 1 hour. The pH was lowered to -3 with TFA and the product was isolated by RPHPLC to yield the title compound (320 mg after lyophilization) as a white solid. MS and NMR were consistent with the desired structure.

Preparation $f(\pm) \beta - [[2-[[[3-[(aminothi x methyl)-amin]phenyl]carbonyl]amino]acetyl]amino]-3,5-dichlorobenzenepropanoic acid$

The above compound was prepared according to the
methodology of Example 198, substituting an equivalent
amount of 1-(3-carboxyphenyl)-2-thiourea (Transworld) for
the product from Example J in Example 197, Step B. MS and
NMR were consistent with the desired structure.

5

Pr paration of (±) β -[[2-[[[3-[(aminoiminomethyl)-amino]phenyl]carbonyl]amin]acetyl]amino]-3,4-dibromobenzenepropanoic acid, trifluoroacetate salt

The above compound was prepared according to the

methodology of Example 175, substituting an equivalent
amount of 3,4-dibromobenzaldehyde (Lancaster) for 3,4dichlorobenzaldehyde in Example 174, Step A. MS and NMR
were consistent with the desired structure.

20

5

EXAMPLE 208

Preparation of (±) β-[[2-[[[3-[(amin iminom thyl)-amino]phenyl]carbonyl]amino]acetyl]amin]-3-fluoro-5-(trifluoromethyl)benzenepropanoic acid, trifluoroacetate salt

The above compound was prepared according to the methodology of Example 175, substituting an equivalent amount of 3-fluoro-5-trifluoromethylbenzaldehyde (Lancaster) for 3,4-dichlorobenzaldehyde in Example 174, Step A.

10

15

20

30

EXAMPLE 209

Preparation of (±) β -[[2-[[[3-[(aminoiminomethyl)-amino]phenyl]carbonyl]amino]acetyl]amino]-3-bromo-5-fluorobenzenepropanoic acid, trifluoroacetate salt

Step A

To 1-fluoro-3,5-dibromobenzene (Lancaster) (10 g, 0.0394 mole) in anhydrous ethyl ether (50 mL), in a flame dried flask under N₂ and at -78°C was added 1.6 m butyl lithium in hexane (Aldrich) dropwise, keeping the temperature below -78°C during the addition. After the addition was complete, the reaction was stirred at -78°C for an additional 50 minutes. The reaction was slowly warmed to -30°C, then andhyrous DMF (3.6 g, 0.049 mole) was added dropwise and at such a rate as to keep the temperature below -20°C.

After the addition was complete, the temperature was slowly raised to 0°C over an hour, then stirred overnight at room temperature. The reaction mixture was slowly poured into cold 10% aqueous HCl (80 mL). After stirring for 15 minutes, the ether layer was separated and the ether was washed with $\rm H_2O$ (4X), dried over MgSO, and removed under vacuum to yield 3-bromo-5-fluorobenzaldehyde (8.16 g) as an amber liquid. MS and NMR were consistent with the desired product.

Step B

The title comp und was prepared according to the methodology of Example 175, substituting an equivalent amount of 3-bromo-5-fluor benzaldehyd (Step A above) f r 3,4-dichlorobenzaldehyde in Example 174, Step A. MS and NMR were consistent with the desired structure.

10

EXAMPLE 210

Preparation of (±) β -[[2-[[[3-[(aminoiminomethyl)-amino]phenyl]carbonyl]amino]ac tyl]amino]-3,5-dibromobenzenepropanoic acid, trifluoroacetate salt

Step A

To 3,5-dibromobenzylbromide (Lancaster) (20 g, 0.061 mole) in H₂O (27 mL) and glacial acetic acid (27 mL) was added hexamethylenetetramine (Aldrich). The reaction mixture was heated at reflux for 2 hours. Concentrated HCl (22 mL) was then added and the refluxing was continued for 30 minutes. After cooling to room temperature, the reaction mixture was poured into H₂O (230 mL) and stirred for 10 minutes. The resulting precipitate was filtered, washed with H₂O and dried to yield 3,5-dibromobenzaldehyde (11.45 g) as a white solid. MS and NMR were consistent with the desired structure.

25 Step B

30

The title compound was prepared according to the methodology of Example 175, substituting an equivalent amount of 3,5-dibromobenzaldehyde (Step A above) for 3,4-dichlorobenzaldehyde in Example 174, Step A. MS and NMR were consistent with the desired structure.

10

20

EXAMPLE 211

Pr paration f (±) 3,5-dibromo-β-[[2-[[[3-[(1,4,5,6-tetrahydropyrimidin-2-yl)amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid, trifluoroacetate salt

15 Step A

Ethyl- β -[(2-aminoacetyl)amino](3,5-dibromophenyl)-3-propanoate hydrochloride was prepared according to the methodology of Example 1, Steps A-D, substituting an equivalent amount of 3,5-dibromobenzaldehyde (Example 210, Step A) for 3-pyridinecarboxaldehyde in Example 1, Step A. MS and NMR were consistent with the desired structure.

Step B

The title compound was prepared according to the

25 methodology of Example 200, substituting an equivalent
amount of the product from Example 211, Step A (above) for
the product from Example 197, Step A in Example 199, Step
B. MS and NMR were consistent with the desired structure.

10

EXAMPLE 212

Preparati n f (±) β -[[2-[[[3-[(aminoiminomethy1)-amino]phenyl]carbonyl]amino]acetyl]amino]-3-bromo-5-methylbenzenepropanoic acid, trifluoroacetate salt

Step A

To 5-bromo-m-xylene (24.03 g, 0.13 mole) in benzene (125 mL) was added benzoylperoxide (3.04 g, 0.013 mole). 15 The reaction mixture was heated to reflux in a 250 mL round bottom flask. N-bromosuccinimide (18.15 g, 0.10 mole) was added in portions over 15 minutes. After 2 hours, heating was discontinued and the reaction mixture was allowed to cool to room temperature. Precipitated 20 solids were removed by filtration and the filtrate was concentrated. The residue was taken up in hexane and additional solids were removed by filtration. filtrate was passed through a small pad of silica gel and the filtrate was concentrated. The resultant yellow oil 25 was titurated with MeOH over ice to give 3-bromo-5methylbenzyl bromide (7.34 g) as a white solid. MS and NMR were consistent with the desired structure.

30 Step B

To 3-bromo-5-methylbenzyl bromide (Step A above) (5.49 g, 20 mmole) in glacial acetic acid (9.0 mL) and $\rm H_{2}O$ (9 mL) was added hexamethylenetetramine (4.50 g, 32 mmole) and the reaction was stirred at reflux for 2 hours.

Concentrated HCl (7.0 mL) was added and the mixture was r fluxed an additional 15 minutes. After cooling to room temperature, the r action mixture was diluted with H₂O (75 mL) and extracted with ether (150 mL). The ether layer was washed with H₂O (3 X 25 mL), 10% NaHCO₃ (2 X 50 mL) and dried over MgSO₄. The ether was removed under vacuum and the residue was chromatographed on silica gel eluting with hexane and 10% Et₂O/hexane to yield 3-bromo-5-methylbenzaldehyde (2.80 g) as a light yellow oil which solidified upon standing. MS and NMR were consistent with the desired structure.

Step C

10

The title compound was prepared according to the methodology of Example 175 substituting an equivalent amount of 3-bromo-5-methylbenzaldehyde (Step B above) for 3,4-dichlorobenzaldehyde in Example 174, Step A. MS and NMR were consistent with the desired structure.

10

20

EXAMPLE 213

Preparation of (±) β -[[2-[[[3-[(amin imin m thyl)-amino]-5-(trifluoromethyl)phenyl]carbonyl]amino]-acetyl]amino]-3,5-dibromobenzenepropanoic acid, trifluoroacetate salt

The above compound was prepared according to the methodology of Example 39, substituting the equivalent amount of 3,5-dibromobenzaldehyde (Example 210, Step A) for 3,5-bis-trifluoromethylbenzaldehyde in Example 38. MS and NMR were consistent with the desired structure.

10

30

EXAMPLE 214

Preparation of (±) β -[[2-[[[3-[(aminoiminom thyl)-amino]ph nyl]carbonyl]amino]acetyl]amino]-3-bromo-5-chlorobenzenepropanoic acid, trifluoroacetate salt

Step A

To 1-chloro-3,5-dibromobenzene (Esprit) (20 g, 0.074 mole) in anhydrous ethyl ether (150 mL) in a flame dried flask under N₂ and at -78°C was added 1.6 m butyl lithium in hexane dropwise, keeping the temperature below -78°C, then warmed to -30°C. Anhydrous DMF (6.8 g, 0.092 mole) was added dropwise, keeping the temperature below -20°C. After the addition was complete, the reaction was slowly warmed to 0°C, then stirred overnight at room temperature. The reaction mixture was poured slowly into chilled 10% aqueous HCl (160 mL). After stirring for 15 minutes, the ether was separated, washed with H₂O (4X), dried over MgSO₄ and removed under vacuum to yield 3-bromo-5-chlorobenzaldehyde (13 g) as a white solid. MS and NMR were consistent with the desired structure.

Step B

The title compound was prepared according to the methodology of Example 175, substituting an equivalent amount of 3-bromo-5-chlorobenzaldehyde (Step A above) for 3,4-dichlorobenzaldehyde in Example 174, Step A. MS and NMR were consistent with the desired structure.

10

20

30

EXAMPLE 215

Pr paration of (±) 3-bromo-5-chlor -β-[[2-[[[3-[(1,4,5,6-t trahydropyrimidin-2-y1) amino]phenyl]carbonyl]amino]acetyl]amino]-benzenepropanoic acid, trifluoroacetate salt

15 Step A

Ethyl β -[(2-aminoacetyl)amino](3-bromo-5-chlorophenyl)-3-propanoate hydrochloride was prepared according to the methodology of Example 1, Steps A-D, substituting an equivalent amount of 3-bromo-5-chlorobenzaldehyde (Example 214, Step A) for 3-pyridinecarboxaldehyde in Example 1, Step A. MS and NMR were consistent with the desired structure.

Step B

The title compound was prepared according to the methodology of Example 200, substituting an equivalent amount of the product from Step A (above) for the product from Example 197, Step A in Example 199, Step B. MS and NMR were consistent with the desired structure.

10

20

EXAMPLE 216

Preparation f (±) β -[[2-[[[3-[(aminoiminomethyl)-amino]-5-(triflu romethyl)phenyl]carbonyl]amino]-acetyl]amino]-3-bromo-5-chlorobenzenepropanoic acid, trifluoroacetate salt

The above compound was prepared according to the methodology of Example 39, substituting an equivalent amount of 3-bromo-5-chlorobenzaldehyde (Example 214, Step A) for 3,5-bis-trifluoromethylbenzaldehyde in Example 38. MS and NMR were consistent with the desired structure.

EXAMPLE 217

Pr paration of (±) [2-[2-[2-(2-hydroxyeth xy)-ethoxy] thoxy]ethyl] 3,5-dichl ro-β-[[2-[[[3-[(1,4,5,6-tetrahydropyrimidin-2-yl)amino]phenyl]-carbonyl]amino]acetyl]amino]benzenepropanoate, trifluoroacetate salt

in DMA (1.5 mL) was added carbonyldiimidazole (67 mg, 0.00041 mole). The reaction was stirred at room temperature for 1 hour. Tetraethyleneglycol (214 mg, 0.0011 mole) was then added and the reaction mixture was stirred overnight at 60°C. The reaction was cooled to room temperature and the product was isolated by RPHPLC to yield the title compound (120 mg after lyophilization) as a hygroscopic white solid. MS and NMR were consistent with the desired structure.

EXAMPLE 218

Preparation of (±) [2-[2-[2-(2-hydr xyeth xy)-thoxy]ethoxy]ethyl] $\beta-[[2-[[[3-[(aminoiminomethyl)-amino]phenyl]carbonyl]amino]acetyl]amino]-3,5-dichlorobenzenepropanoate, trifluoroacetate salt$

The above compound was prepared according to the methodology of Example 217, substituting an equivalent amount of the product of Example 27, for the product of Example 200. MS and NMR were consistent with the desired structure.

10

15

20

25

30

EXAMPLE 219

Preparation of (±) β-[[2-[[[3-[(amin iminomethyl)-amino]phenyl]carbonyl]amino]ac tyl]amino]-3-bromo-5-iodobenzenepropanoic acid trifluoroacetate salt

Methanol (40 mL) was added to a 250 mL round bottom flask followed by 60 mL of a solution saturated with anhydrous hydrochloric acid. 3-bromo-5-iodobenzoic acid (Aldrich) (5.02 g, 0.015 mole) was then added and the reaction mixture was stirred at room temperature for 6 hours. The reaction mixture was poured into chilled saturated NaHCO₃ solution (700 mL). The mixture was extracted 3X with methylene chloride (100 mL). The organic layers were combined, dried over MgSO₄ and concentrated under vacuum to yield methyl-5-bromo-3-iodobenzoate (5.08 g) as a pink solid. MP = 55-57°C. MS and NMR were consistent with the desired structure.

Step B

Step A

To methyl 5-bromo-3-iodobenzoate (Step A above) (5.01 g, 0.015 mole) in anhydrous methylene chloride (100 mL) at -78°C, was added dropwise over two minutes, diisobutylaluminum hydride (5.50 mL, 0.03 mole). The mixture was stirred for 1 hour then allowed to warm to 0°C. The reaction solution was poured into 600 mL, chilled 3N HCl and extracted 3X with methylene chloride (150 mL). The organic layers were combined, dried over

WO 97/08145

MgSO₄ and concentrated under vacuum to yield 5-brom -3-iod benzyl alcohol (4.54 g) as a white s lid. MP = 110-112°C. MS and NMR were c nsistent with the desired structure.

5

10

15

20

25

30

Step C

5-Bromo-3-iodobenzyl alcohol (3.01 g, 9.6 mmol) in a 50 mL round bottom flask was stirred magnetically and diluted with 15 mL anhydrous methylene chloride to give a turbid solution. The reaction flask was then stoppered and the septum stopper secured with wire.

Anhydrous methylene chloride (15 mL) was added to a separate 100 mL round bottom flask which was equipped with a cold finger. Nitrogen dioxide (1.72 g, 18.7 mmol) was condensed into the solution of methylene chloride at -20°C.

The benzyl alcohol solution was chilled to 0°C and the nitrogen dioxide/methylene chloride solution was transferred via cannula into the reaction flask under a static nitrogen atmosphere. The reaction solution was stirred magnetically at 0°C for 15 minutes after completion of the nitrogen dioxide solution transfer. The reaction solution was stirred at room temperature for 18 hours.

The reaction flask was vented in the hood and the excess nitrogen dioxide was expelled with a nitrogen stream. The reaction solution was then concentrated by rotary evaporation and resuspended in 30 mL ether. The ether solution was washed with 200 mL 10% sodium bicarbonate in a 500 mL separatory funnel. The resulting aqueous solution was extracted three times with 150 mL ether. The organic layers were combined, dried with sodium sulfate, filtered and concentrated in vacuo to afford 2.89 g of a yellow solid.

The product was is lat d by flash chromatography to yield 5-br mo-3-iod benzaldehyde as a white solid. MS and NMR were consistent with th d sired structure.

5 Step D

10

The title compound was prepared according to the methodology of Example 175, substituting an equivalent amount of 5-bromo-3-iodobenzaldehyde (Step C, above) for 3,4-dichlorobenzaldehyde in Example 174, Step A. MS and NMR were consistent with the desired structure.

EXAMPLE 220

Preparati n f (±) [2-[2-(2-hydr xy thoxy)-eth xy]ethoxy]ethyl] 3,5-dichloro-β-[[2-[[[3-[(1,4,5,6-tetrahydropyrimidin-2-yl)amino]-phenyl]carbonyl]amino]acetyl]amino]-benzenepropanoate, trifluoroacetate salt

The above compound was prepared according to the
methodology of Example 217, substituting an equivalent
amount of triethyleneglycol for tetraethyleneglycol. Ms
and NMR were consistent with the desired structure.

10

Example 222

Preparation of (±) β -[[2-[[[3-[(amin iminomethyl)amino]-phenyl]carbonyl]amino]acetyl]amino]-2-hydroxy-4-methoxybenzenepropanoic acid

(RS)-4-amino-7-methoxy hydrocoumarin hydrochloride (1.26 g, 5.5 mmole), prepared from 7-methoxycoumarin 15 (Aldrich) according to J. Rico, Tett. Let., 1994, 35, 6599-6602, was coupled to GIHA (1.50 g, 5.5 mmole) using substantially the procedure and proportions of Example 86, Step D. Purification by preparative RPHPLC gave the desired product as a mixture of hydrocoumarin (lactone) 20 and phenoxy-acid TFA salts as a light yellow powder after lyophilization (1.25 gm). Essentially complete conversion to the desired phenol-acid can be obtained by dissolving the purified mixture in water, adjusting the pH to 7-8 with dilute aqueous NaOH until reaction is complete by 25 HPLC, and lyophilizing (0.5 gm). MS and NMR were consistent with the desired phenol-carboxylic acid form of the molecule.

10

Example 223

Preparati n of (±) β-[[2-[[[3-[(aminoiminomethyl)amino]-phenyl]carbonyl]amin]acetyl]amin]-5-hydr xy-4-methoxybenzofuran-6-propanoic acid, trifluoroacetate salt

(RS)-4-amino-8-methoxy-hydropsoralen hydrochloride

(2.2 gm, 8.1 mmole), prepared from 8-methoxypsoralen according to J. Rico, <u>Tett. Let.</u>, 1994, <u>35</u>, 6599-6602, was coupled to GIHA (2.0 g, 7.3 mmole) using substantially the procedure and proportions of Example 86, Step D. The product was isolated by preparative RPHPLC as the desired phenol-acid. NMR and MS were consistent with the desired structure.

10

25

Example 224

Pr parati n of (±) β-[[2-[[[3-[(aminoiminomethyl)amino]-phenyl]carbonyl]amino]acetyl]amino]-9H-fluoren 2-propanoic acid, trifluoroacetate salt

Step A

(\pm) β -amino-9H-fluorene-2-propanoic acid

2-fluorene-carboxaldehyde (5.0 gm, 26 mmole, Aldrich) was combined with malonic acid (3.25 gm, 31 mmole), ammonium acetate (2.4 gm, 31 mmole), and isopropyl alcohol (70 mL) and refluxed overnight. After cooling the precipitated solid was collected by filtration and dried. NMR and MS were consistent with the proposed structure.

Step B

30 Ethyl (\pm) β -amino-9H-fluorene-2-propanoate

The product from Step A was taken up in absolute EtOH, dry HCl gas was added to saturation, and the mixture refluxed overnight. Volatiles were removed and the resulting semi-solid partitioned between ethyl acetate and

water. The aqueous layer was made basic by additi n of 2.5 N NaOH and extracted with EtOAc (2 x 200 mL). Th organic layer was dried (anhydr us NaSO₄) and dry HCl gas added until precipitation ceased. V latiles were rem ved until a semisolid residue remained. This was triturated with diethyl ether to obtain a solid that was collected by filtration. NMR and MS were consistent with the proposed structure.

10 Step C

15

20

The title compound was prepared in the following manner. GIHA (0.41 gm, 1.5 mmole) was coupled to the product of Step B (0.42 gm, 1.5 mmole) above using substantially the procedure of Example 86, Step D. Preparative RPHPLC was used to isolate the ethyl ester of the title compound. This product (280 mg) was hydrolyzed to the acid by treating an aqueous dioxane solution (1:1) with excess LiOH, acidifying with TFA and purifying the product by RPHPLC. A white amorphous solid is obtained after lyophilization (250 mg). NMR and MS were consistent with the proposed structure.

10

15

30

Example 225

Preparation of (±) β-[[2-[[[3-[(amin iminomethyl)amino]phenyl]carbonyl]amino]acetyl]amin]-3,5-dichlor 2-hydroxybenzenepropanoic acid,
trifluoroacetate salt, monohydrate

H₂N CI

The above compound was prepared by reacting 3,5-dichlorosalicylaldehyde (10.0 gm, 52.4 mmole, Aldrich), malonic acid, and ammonium acetate in isopropyl alcohol using substantially the same procedure and proportions of Example 224, Step A. NMR and MS were consistent with the desired intermediate.

Step B

Step A

GHIA (1.0 gm, 3.7 mmole) and the product of Step A (1.1 gm, 4.4 mmole) were coupled using substantially the same procedure and proportions as Example 86, Step D. Desired product was isolated by C-18 RPHPLC and the appropriate fractions combined and lyophilized to give the title compound (0.42 gm). NMR and MS were consistent with the proposed structure.

10

Example 226

Preparation of (±) β -[[2-[[[3-[(aminoiminom thyl)amino]-phenyl]carbonyl]amin]acetyl]amino]-2-hydroxy-5-nitrobenzenepropanoic acid, trifluoroacetate salt

(RS)-4-amino-6-nitro-hydrocoumarin hydrochloride (1.1 g, 4.4 mmole) prepared from 6-nitrocoumarin (Aldrich) according to J. Rico, Tett. Let., 1994, 35, 6599-6602, was 15 coupled to GIHA (1.0 g, 3.7 mmole) using substantially the procedure and proportions of Example 86, Step D. Purification by preparative RPHPLC gave the desired product as a mixture of hydrocoumarin (lactone) and phenoxy-acid TFA salts as a powder after lyophilization. 20 Essentially complete conversion to the desired phenol-acid was obtained by dissolving the purified mixture in water, adjusting the pH to 7-8 with dilute aqueous NaOH until reaction is complete by HPLC, and lyophilizing. MS and 25 NMR were consistent with the desired phenol-carboxylic acid form of the molecule.

Example 227

Preparation of (±) β-[[2-[[[3-[(aminoiminom thyl)-amin]phenyl]carbonyl]amin]ac tyl]amino]-3,5-dibromo-2-hydroxybenzenepropanoic acid, trifluoroacetate salt, monohydrate

Step A

15

10

5

20

The above beta amino acid ester hydrochloride salt was prepared according to substantially the methodology of Example 1, Steps A and B substituting 3,525 dibromosalicylaldehyde (20.0 gm, 0.0715 mole, Aldrich) for 3-pyridine carboxaldehyde in Step A and keeping the proportions constant. NMR and MS were consistent with the proposed structure.

30

Step B

Ethyl (\pm) β -[[2-[[[3-[(aminoiminomethyl)amino]ph nyl]-carbonyl]amino]ac tyl]amino]-3,5-dibromo-2-hydr xybenzen - pr panoate, trifluor acetate salt, m n hydrate

10

15

20

5

GHIA (1.0 gm, 3.7 mmole) and the product of Step A (1.78 gm, 4.4 mmole) were coupled using substantially the same procedure and proportions as Example 86, Step D. The desired product was isolated by C-18 RPHPLC and the appropriate fractions combined and lyophilized to give ethyl (±) β -[[2-[[[3-[(aminoiminomethyl)amino]phenyl]-carbonyl]amino]acetyl]amino]-3,5-dibromo-2-hydroxybenzenepropanoate, trifluoroacetate salt, monohydrate (0.52 gm). NMR and MS were consistent with the proposed structure.

Step C

25

The product obtained in Step B was converted to the acid using substantially the procedure and conditions of Example 6, however, the hydrolysis solvent was dioxane:water. Preparative C-18 RPHPLC purification gave the TFA salt (300 mg). NMR and MS were consistent with the proposed structure.

10

Example 228

Preparation f (±) β-[[2-[[[3-[(aminoiminomethy1)-amino]phenyl]carbonyl]amino]acetyl]amino]-5-bromo-2-hydroxybenzenepropanoic acid, trifluoroacetate salt, monohydrate

The title compound was prepared using substantially
the procedure and proportions of Example 224, and
substituting 5-bromosalicylaldehyde for 3,5dichlorosalicylaldehyde to obtain the ethyl ester of the
title compound. After ester hydrolysis the acid-phenol
was obtained (0.3 gm after lyophilization). NMR and MS
were consistent with the proposed structure.

Example 229

Preparation of (±) β -[[2-[[[3-[(aminoiminom thyl)-amino]phenyl]carbonyl]amino]acetyl]amino]-cyclohexanepropanoic acid, trifluoroacetate salt, monohydrate

Step A

15

10

5

20

25

To a solution of ethyl (R,S)-3-amino-3-phenyl propionate hydrochloride (1.7 gm) dissolved in absolute EtOH (70 mL) was added 5% Pt on carbon and the reaction mixture transferred to a pressure bottle. After purging, the reaction vessel was pressurized with hydrogen (54 psig) and the reaction allowed to go to completion. Volatiles were removed and the product used without further purification. NMR and MS were consistent with the proposed structure.

30

Step B

Ethyl (R,S)3-amino-3-cyclohexylpropionate hydrochloride and GIHA were coupled using substantially the same procedure and proportions as Example 86, Step D.

- Ethyl (\pm) β -[[2-[[[3-[(amin iminomethyl)amino]phenyl]-carbonyl]amino]acetyl]amino]cycl hexane pr panoic acid, trifluoroacetate salt, m nohydrate was isolated using C-18 RPHPLC and lyophilized to give a white amorphous powder. Ethyl (\pm) β -[[2-[[[3-[(aminoiminomethyl)amino]phenyl]-carbonyl]amino]acetyl]amino]cyclohexane propanoic acid, trifluoroacetate salt, monohydrate was hydrolyzed using the procedure of Example 224, Step C to give the title compound (0.5 gm). NMR and MS were consistent with the proposed structure.
- 10

Example 230

Preparation f (±) ethyl β-[[2-[[[3-[(aminoiminomethyl)-amin]phenyl]carbonyl]amino]acetyl]amino]3,5-dichloro-2-hydroxybenzenepropanoate,
trifluoroacetate salt, monohydrate

Step A

15

20

25

30

10

5

(RS)-4-Amino-6,8-dichlorocoumarin hydrochloride was prepared according to the procedure of Example 233, Steps A and B substituting 3,5-dichloro-salicylaldehyde for 3-bromo-5-chlorsalicylaldehyde in Example 233, Step A.

The above beta amino ethyl ester hydrochloride salt was prepared by dissolving the (RS)-4-amino-6,8-dichlorohydrocoumarin hydrochloride (8.0 g, 0.0207 mole) in absolute EtOH (30 mL) and adding 4 N HCl in dioxane (10 mL) and stirring the reaction mixture at room temperature for 2.5 hours. Excess HCl was removed by rotary evaporation (cold) and the reaction mixture was concentrated to a solid (50°C). The solid was treated with EtOAc (25 mL) and Et₂O (10 mL) and stirred to give a white solid that was isolated by filtration (5.84 g). MS and NMR were consistent with the desired beta-amino acid

thyl ester as the hydrochl ride salt.

Step B

T a solution f GIHA HCl (3.4 gm, 0.0124 mole) dissolved in dimethylacetamide (40 mL) was added Nmethylmorpholine NMM, (1.36 mL, 0.0124 mole) and the solution cooled to 0-5°C with gentle stirring. Isobutylchloroformate (1.61 mL, 0.0124 mole) was added and the reaction allowed to proceed for about 10 minutes. this point a solution of the product of Step A (3.90 gm, 10 0.0124 mole) and NMM (1.36 mL) in DMA (20 mL) were added to the reaction mixture and the coupling allowed to proceed overnight. Volatiles were removed and the reaction mixture redissolved in acetonitrile:water and brought to pH of about 2 by the addition of TFA. The 15 desired product was isolated by preparative C-18 RPHPLC and lyophilized to obtain the TFA salt (2.61 gm). NMR and MS were consistent with the structure of the title compound.

Example 231

Preparation of (±) β-[[2-[[[3-[(amin iminomethyl)-amin]phenyl]carbonyl]amin]acetyl]amino]5-chloro-2-hydroxybenzenepropanoic acid,
trifluoroacetate salt, monohydrate

The above compound was prepared using substantially the procedure and proportions of Example 224 and substituting 5-chlorosalicylaldehyde for 3,5-dichlorosalicylaldehyde. After final ester hydrolysis the acid-phenol was obtained (0.3 gm after lyophilization). NMR and MS were consistent with the proposed structure.

Example 232

Preparation f (±) 3,5-dichl ro-2-hydroxy-β-[[2-[[[3-[(3,4,5,6-tetrahydro-2H-azepin-7-yl)amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid, trifluoroacetate salt, monohydrate

10

5

15

Step A

NH NH OH

20

To m-aminohippuric acid (2.0 gm, 8.7 mmole) in acetonitrile (50 mL) was added 1-aza-2-methoxy-1
25 cycloheptane (1.2 gm, 9.5 mmole) (Aldrich). The reaction was allowed to proceed at room temperature over a weekend. Solvent was removed and the residue triturated with diethyl ether to give a solid (1.6 gm) that was substantially pure 3-(1-aza-2-amino-1-cycloheptane)
30 hippuric acid by analytical RPHPLC, MS and NMR.

Step B

The product obtained in Step A, 3-(1-aza-2-amino-1-cycloheptane)-hippuric acid (1.0 gm, 3.2 mmole) was

coupled to the compound prepared in Example 230, Step A (1.0 gm, 3.2 mmole), using substantially the conditions and procedur of Example 230, Step B and substituting 3-(1-aza-2-amino-1-cycl heptane)-hippuric acid for GIHA. Purification by C-18 RPHPLC gave the ethyl ester of the title compound (0.5 gm). NMR and MS were consistent with the proposed structure.

Step C

The product prepared in Step B (0.35 gm), was dissolved in dioxane-water (1:1, 30 mL) and the pH adjusted to about 11 by addition of LioH (NaOH may be freely substituted for LioH). Upon complete hydrolysis to the acid (determined by analytical RPHPLC) the reaction mixture was acidified to about pH 2-3 by addition of TFA and the desired compound was isolated by preparative scale C-18 RPHPLC. NMR and MS were consistent with the structure of the title compound.

Example 233

Pr parati n of (±) β-[[2-[[[3-[(aminoiminomethyl)-amino]phenyl]carbonyl]amino]acetyl]amino]3-bromo-5-chloro-2-hydroxybezenepropanoic
acid, trifluoroacetate salt, monohydrate

Step A

15

10

5

20

25

30

A solution of 3-bromo-5-chlorosalicylaldehyde (11.0 gm, 0.047 mole and triethylamine (5.6 mL) dissolved in acetic anhydride (14.0 mL) was heated to reflux for 4 hours. The reaction was allowed to cool to room temperature and volatiles were removed under vacuum. The resulting solid was partitioned between EtOAc and aqueous sodium bicarbonate and the layers separated. The aqueous layer was re-extracted with EtOAc and the organic layers combined, dried (Na₂SO₄) and volatiles removed under vacuum to obtain a solid (13.5 gm). NMR and MS were consistent with the proposed structure.

Step B

H₂N Br

The product obtained in Step A (10.0 gm, 0.039 mole) was converted to (RS)-4-amino-6-chloro-8-bromo-hydrocoumarin hydrochloride (5.1 g, 18.5 mmole) according to J. Rico, <u>Tett. Let.</u>, 1994, <u>35</u>, 6599-6602 with the following modification: the addition product obtained by the addition of lithium bis-trimethylsilylamide to the coumarin of Step A was quenched by addition of one equivalent HOAc at 0°C prior to workup.

Step C

The product of Step B (4.0 gm, 0.013 mole) was coupled to GHIA HCl (3.3 gm, 0.012 mole) using substantially the procedure of Example 230 but substituting the compound obtained in Step B for the compound of Example 30, Step A to give, after C-18 RPHPLC purification and hydrolysis of the appropriate fraction according to the procedure of Example 232, Step C, the desired compound (TFA salt) as a fluffy, white powder (4.8 g) after lyophilization. NMR and MS were consistent with the proposed structure.

30

Example 234

Preparation of (±) 5-amin -β-[[2-[[[3-{(aminoiminomethyl)-amin]ph nyl]carbonyl]amino]acetyl]amino]2-hydroxybenzenepropanoic acid,
bis(trifluoroacetate) salt, monohydrate

The product from Example 226 (0.5 gm) was dissolved in AcOH:H₂O (2:1, 60 mL) and 3% Pd on carbon added (0.5 gm, Aldrich). The reaction mixture was pressurized with hydrogen (20 psig) and allowed to react with vigorous stirring for 2 hours. Catalyst was removed by filtration and the mixture concentrated to a thick oil. The oil was dissolved in water and the desired compound isolated by C-18 RPHPLC. NMR and MS were consistent with the proposed structure.

10

Example 235

Preparation f (±) β-[[2-[[[3-[(amin iminomethyl)-amin]phenyl]carbonyl]amino]acetyl]amino]5-bromopyridine-3-propanoic acid,
bis(trifluoroacetate) salt, monohydrate

Step A

N(OCH₃)CH₃

To a solution of 5-bromonicotinic acid (20.0 gm, 0.10 20 mole), O,N-dimethylhydroxylamine (9.8 gm, 0.1 mole) and 1ethyl-3-(3-dimethylaminopropyl)carbodiimide hydrochloride salt in DMF (200 mL) was added 1-hydroxytriazole (200 mL of 0.5 M solution in DMF, 0.10 mole) and triethylamine 25 (19.7 mL, 0.14 mole) and the reaction mixture stirred vigorously for 18 hours. Volatiles were removed under vacuum at 60°C until a mush remained. The reaction mixture was partitioned between ethyl acetate (300 mL) and saturated aqueous sodium bicarbonate, the layers separated and the aqueous layer re-extracted with EtOAc. The 30 organic layers were combined dried (Na2SO4) and concentrated to a dark yellow oil (21.4 gm). NMR and MS were consistent with the proposed structure.

Step B

Br

5

10

15

A solution of the product of Step A (12.9 gm, 0.053 mole) in THF (300 mL) was cooled to 0°C and LAH in THF (53 mL of 1.0 M stock solution, Aldrich) was added via syringe. After 0.5 hour KHSO₄ (19.6 gm, 0.13 mole, in 100 mL water) was added. After several minutes dilute aqueous HCl (50 mL) was added and the organic layer separated, dried (Na₂SO₄) and volatiles removed to obtain a yellow oil that solidifies on standing. The solid was purified by sublimation to give the title compound as a white solid (7.8 gm). NMR and MS were consistent with the proposed structure.

Step C

20

25

30

The above beta amino acid ester hydrochloride salt was prepared according to substantially the methodology of Example 1, Steps A and B substituting the compound of Step B (6.24 gm, 0.034 mole) for 3-pyridine carboxaldehyde in Step A and keeping the proportions constant. The product was isolated as the di-TFA salt by C-18 RPHPLC. NMR and MS were consistent with the proposed structure.

10

15

Step D

The product of Step C was coupled to GIHA HCl (0.5 gm, 1.8 mmole) using substantially the procedure of Example 230, Step B and substituting the product of Step C above (and correspondingly two equivalents of NMM) for the product of Example 230, Step A. The ethyl ester of the product was isolated as the di-TFA salt by C-18 RPHPLC. NMR and MS were consistent with the propose structure.

Step E

Hydrolysis of the product of Step D (200 mg) to the corresponding acid was accomplished using substantially the procedure of Example 232, Step C. The product was isolated as the di-TFA salt by C-18 RPHPLC and lyophilized to give the title compound as a white solid (150 mg). NMR and MS were consistent with the proposed structure.

20

10

15

Example 236

Preparati n f (±) 3-bromo-5-chloro-2-hydroxy-β[[2-[[[3-[(1,4,5,6-tetrahydropyrimidin-2-yl)amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid, trifluoroacetate
salt, monohydrate

Step A

HN H OH ·HI

To a solution of 1-(3-carboxyphenyl)-2-thiourea (14.0 gm, 71.3 mmole) in RtOH (absolute, 140 mL) was added iodomethane (10.2 gm) and the solution refluxed for 2.5 hours. Volatiles were removed under vacuum at 60°C to obtain a yellow oil. This was treated with t
25 butylmethylether and volatiles removed to give a yellow foam that became firm upon cooling. NMR and MS were consistent with the proposed structure.

Step B

30

T the product from Step A (5.0 gm, 0.015 mole) diss lved in DMA (50 mL) was added a catalytic amount of DMAP and 1,3-diaminopr pan (1.2 gm, 0.016 mole) and the s lution heated t 100°C f r 48 hours. Volatiles were removed until a thick oil remained. This was treated sequentially with EtoAc, Et₂O and MeOH (50 mL) to obtain a solid that was isolated by filtration. This product was suspended in 4 N HCl in dioxane and stirred for several hours. The resulting solid was filtered, washed with Et₂O and dried (800 mg). NMR and MS were consistent with the proposed structure as the HCl salt.

Step C

15

10

5

20

25

30

To a solution of (RS)-4-amino-6-chloro-8-bromo-hydrocoumarin hydrochloride (2.6 g) prepared in Example 233, Step B, dissolved in THF (50 mL) was added triethylamine (1.0 mL) and N-t-Boc-glycine-N-hydroxysuccinimide ester (2.0 gm, Sigma) and the reaction allowed to proceed to completion. Volatiles were removed and the residue partitioned between EtOAc and water. The organic layer was separated, washed with dilute aqueous HCl, saturated sodium bicarbonate and dried (Na₂SO₄) and concentrated to a dark foam (3.2 gm). This product was used in the next step without further purification.

Step D

The BOC protecting group was removed by dissolving the reaction mixture obtained in Step C in dioxane (20 mL) and to the well stirred solution HCl (4 N in dioxane, Aldrich) was added. Upon cessation of gas evolution (about 0.5 hour) volatiles were removed to obtain a dark residue that was triturated with diethylether to obtain, upon filtration, a yellow solid (2.46 gm). NMR and MS were consistent with the proposed structure as the hydrochloride salt.

20 <u>Step E</u>

25

30

The product from Step D (1.4 gm) and the product from Step B (1.0 gm) were coupled using substantially the procedure of Example 230, Step B. Upon completion of the coupling reaction volatiles were removed from the crude reaction mixture. The reaction mixture was subsequently redissolved in dioxane:water and the pH adjusted to approximately 11 by addition of aqueous NaOH. The pH was maintained above 10 until complete hydrolysis was observed by analytical RPHPLC. At this point the pH was adjusted to 2-3 by addition of TFA and the desired product isolated by preparative C-13 RPHPLC (0.35 gm after lyophilization). NMR and MS were consistent with the proposed structure as the TFA salt.

Example 237

Preparation f (±) 3,5-dichloro-2-hydr xy-β-[[2-[[[3-[(1,4,5,6-tetrahydropyrimidin-2-y])amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid, trifluoroacetate salt, monohydrate

15

20

10

5

The above compound (350 mg) was prepared using essentially the conditions and procedures of Example 236 but substituting (RS)-4-amino-6,8-dichloro-hydrocoumarin hydrochloride prepared from the corresponding salicylaldehyde according to the procedure in Example 233, Steps A and B, for (RS)-4-amino-6-bromo-8-chlorohydrocoumarin hydrochloride in Step E. NMR and MS were consistent with the proposed structure as the TFA salt.

25

Example 238

Preparation f (±) 3,5-dichloro-β-[[2-[[[3-[(4,5-dihydr -1H-pyrrolidin-2-yl)amino]phenyl]carbonyl]-amino]acetyl]amino]-2-hydroxybenzenepropanoic acid, trifluoroacetate salt, monohydrate

The above compound was prepared according to the procedure of Example 236, Steps A and B by substituting ethylene diamine (1,2-diaminoethane) for 1,3-diaminopropane in Step B.

25 Step B

30

The desired end product (300 mg) was prepared by coupling the product f Step A with the hydrochloride salt f the above compound (prepared in Example 237) acc rding to the coupling procedure of Example 237. NMR and MS were consistent with the proposed structure as the TFA salt.

10

20

Example 239

Preparati n f (±) 3-br mo-5-chloro-β-[[2-[[[3-[(4,5-dihydro-1H-pyrr lidin-2-yl)amino]phenyl]carbonyl]amino]acetyl]amino]-2-hydroxybenzenepropanoic
acid, trifluoroacetate salt, monohydrate

The above compound was prepared according to the procedure of Example 238 by substituting the product of Example 238, Step A for the product of Example 237, Step B. NMR and MS were consistent with the proposed structure as the TFA salt.

10

20

Example 240

Preparation of 3,5-dichloro-β-[[2-[[[3-[[(ethoxycarbonyl)amin]thioxomethyl]amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid

Step A

3-Amino-3-(3,5-dichlorophenyl) propionic acid, tert-butyl ester

A mixture of 13.5 g of 1-bromo-3,5-dichlorobenzene

(Aldrich, 13.5 g), tert-butyl acrylate (Aldrich, 11.1 mL), triethylamine (8.4 mL), Pd(OAc)₂ (0.12 g), tris-p-tolylphosphine (0.9 g) and acetonitrile (20 mL) was prepared in a steel bomb under nitrogen. The vessel was sealed and heated to 120°C for 16 hours. Chloroform (40 mL) was added to the cooled reaction mixture and the mixture was extracted with ether and water. The organic phase was washed with water, dried over MgSO₄ and concentrated in vacuo. The residue was rapidly filtered through silica gel using 8% ethyl acetate in hexane as

luant, to provide 13 g of a thick liquid. A mixture of this product (12.6 g) tert-butanol (35 mL) and amm nia (40 mL) in a steel bomb was heated to 80°C for 25 hours (pressure, at room temperatur was 130 psi; at 80°C, 500 psi). After cooling and venting, the contents were concentrated in vacuo. The residue was extracted with ethyl acetate (100 mL) and cold, dilute hydrochloric acid (1N, 100 mL) added. The aqueous phase was basified with solid K₂CO₃ and extracted with ether and methylene chloride. The organic phase was dried over K₂CO₃ and concentrated in vacuo to give the above compound (11 g) as a thick, reddish brown liquid.

Step B

15

10

5

20

25

30

To a stirred solution of 3-nitrobenzoyl chloride (7 g, Aldrich) in CH₂Cl₂ at -78°C was added glycine methyl ester hydrochloride (5 g, Aldrich) followed by triethylamine (20 mL). The mixture was allowed to warm to room temperature over 16 hours. The volatiles were removed and the residue was extracted with ethyl acetate and water. The organic phase was washed with water, dried over MgSO₄ and concentrated in vacuo. The residue was stirred in tetrahydrofuran (50 mL) and aqueous lithium hydroxide (50 mL, 1M) for 15 minutes. The volatiles were removed and the residue was treated with hydrochloric acid (50 mL, 3M) and extracted with ethyl acetate and water. The organic phase was washed with water, dried over MgSO₄

and concentrated in vacuo. To a stirred soluti n of the residue (2.24 g) in tetrahydrofuran (15 mL) at -78°C was added in succession 4-methylmorph line (1.1 mL, Aldrich) and isobutyl chlor f rmate (1.3 mL, Aldrich). After 30 minutes, 3-amino-3-(3,5-dichlorophenyl) propionic acid, 5 tert-butyl ester (2.91 g, prepared in Step A) was added. The mixture was allowed to warm to room temperature over 2 The volatiles were removed and the residue was extracted with ethyl acetate and water. The organic phase was washed with water, dried over MgSO4 and concentrated 10 in vacuo. A solution of the residue in tetrahydrofuran and ethanol (1:1, 30 mL) was shaken in a Parr hydrogenator with 3% Pd/C (0.5 g) under 5 psi hydrogen pressure for 5 The mixture was filtered and the filtrate concentrated to provide the above compound as a thick gum. This sample was used without further purification.

Step C

15

A mixture of the compound of Step B (1.2 g) and 20 ethoxycarbonyl isothiocyanate (Aldrich, 0.3 μ L) in toluene (5 mL) was heated to reflux for 30 minutes. The mixture was concentrated and the residue chromatographed over silica gel to give the t-butyl ester of the title compound (0.78 g) as a white solid. A solution of the t-butyl 25 ester (0.3 g) in trifluoroacetic acid (4 mL) was allowed to stand at 23°C for 16 hours. The volatiles were removed and the residue purified by HPLC to give the title compound as a white solid.

30 C2H2N4O4S. 0.5 HO

Calculated: C, 48.01; H, 4.21; N, 10.18; S, 5.83 Found: C, 47.61; H, 4.11; N, 9.94; S, 5.83

15

EXAMPLE 241

Preparati n of 3,5-dichl ro-β-[[2-[[[3-[[(ethoxycarbonyl)amin]iminomethyl]amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid, trifluoroacetate salt, monohydrate

Step A

A mixture of tert-butyl carbamate (Lancaster, 5 g)

20 and ethoxycarbonyl isothiocyanate (Aldrich, 5 mL) in
toluene (15 mL) was heated to reflux for 2 hours. The
solution was allowed to cool to room temperature over 16
hours. The precipitated solid was filtered and washed
with hexane to give the above compound (5.5 g) as a white
25 solid.

Step B

To a stirred solution f th compound produced in Example 240, Step B (1.3 g) and th product of Step A (0.7 g) in DMF (7 ml) at -15°C was added, in succession, mercuric chloride (0.77 g) and triethylamine (0.8 mL).

The mixture was allowed to warm to room temperature over 1 hour and continued stirring for 1 hour more. The mixture was diluted with ethyl acetate and filtered through celite. The filtrate was washed with water, dried over MgSO₄ and concentrated in vacuo. The residue was purified by chromatography to give the above compound as a white solid.

Step C

A solution of the product of Step B (0.5 g) in

trifluoroacetic acid (10 mL) was allowed to stand at 23°C for 2 hours. The volatiles were removed and the residue purified by HPLC to give the title compound as a white solid.

10

15

Example 242

Preparation of β -[[2-[[[3-[(amin iminomethyl)amino]-phenyl]carbonyl]amino]acetyl]amin][1,1'-biphenyl]-3-propanoic acid

Step A

A mixture of 9.64 g (41.4 mmoles) of 3-bromobiphenyl, 5.8 ml (4.2 g, 41 mmoles) of triethylamine, 6.73 g (52.6 20 mmoles) of t-butyl acrylate, 624 mg (2.05 mmoles) of trip-tolylphosphine, and 83 mg of palladium acetate in 15 ml of dimethylformamide was stirred overnight at 110° in an oil bath. After cooling, the mixture was partitioned between ethyl acetate and water and the aqueous layer 25 further extracted with ethyl acetate. The combined organic extracts were washed with brine, dried over sodium sulfate, filtered and concentrated. Chromatography of the residue over silica gel using mixtures of dichloromethane 30 and hexane as eluents gave the above compound, 10.5 g , as a very pale yellow oil.

¹H NMR (CDCl₃) 7.77-7.36 (m, 9H), 7.69 (d, J=15Hz, 1H), 6.47 (d, J=15Hz, 1H), 1.58 (s, 9H).

Step B

5

10

15

A mixture of 10.5 g (37.5 mmoles) of the product of Step A, 50 ml of liquid ammonia, 5.2g of acetic acid, and 80 ml of t-butanol was heated at 100°C for 18 hours. After cooling, the mixture was concentrated and partitioned between ethyl acetate and aqueous sodium bicarbonate. The aqueous layer was further extracted with ethyl acetate, the combined organic extracts washed with brine, dried over sodium sulfate, filtered, and evaporated. Chromatography of the residue over silica gel using ethyl acetate and then 10% methanol - 1% ammonium hydroxide - 89% ethyl acetate as eluents gave the above compound, 4.75 g, as a colorless oil.

Preparati n of β -[[2-[[[3-[(aminoiminomethyl)amino]-phenyl]carbonyl]amino]acetyl]amino][pyrimidine-5-propanoic acid, trifluoroacetate salt

HN NH₂ NH CO₂H

Step A

15 COO+Bu

20 A mixture of 5.00 g (31.1 mmoles) of 5bromopyrimidine, 3.14 g (31.1 mmoles) of triethylamine, 5.06 g (39.5 mmoles) of t-butyl acrylate, 475 mg of tri-otolylphosphine, and 63 mg of palladium acetate in 11 ml of acetonitrile was stirred at reflux under argon for 8 hours. After cooling, the mixture was partitioned between 25 ethyl acetate and water. The aqueous layer was further extracted with ethyl acetate, the combined organic extracts washed with brine, dried over sodium sulfate, filtered, and evaporated. Chromatography of the residue 30 over silica gel using a gradient of 30-50% ethyl acetate hexane gave the above compound, 0.99 g, as a white crystalline solid.

¹H NMR (CDCl₃) 9.19 (s, 1H), 8.86 (s, 2H), 7.53 (d, J=15Hz, 1H), 6.54 (d, J=15Hz, 1H), 1.55 (s, 9H).

Step B

A solution of 1.28 g (6.21 mmoles) of the product of

Step A in 12 m1 of benzylamine was stirred in a 70-80° oil
bath overnight. After cooling, the excess benzylamine was
evaporated. Chromatography of the residue over silica gel
using 50% ethyl acetate - hexane as eluent gave the above
compound, 1.33 g, as a colorless oil.

15 ¹H NMR (CDCl₃) 9.18 (s, 1H), 8.78 (s, 2H), 7.21 (m, 5H), 4.14 (t, 1H), 3.68 (d, 1H), 3.59 (d, 1H), 2.73 (dd, 1H), 2.57 (dd, 1H), 1.41 (s, 9H).

Step C

20

5

25

30

To a solution of 1.33 g (4.25 mmoles) of the product of Step B in 50 ml of 4:1 ethanol - cyclohexene was added 10% palladium on carbon. The mixture was stirred at reflux overnight under argon, 35 mg of pyridinium p-toluenesulfonate was added, and refluxing continued for another 8 hours. After cooling, the mixture was filtered through a filtering aid, and the filtrate concentrated. The residue was filtered through silica gel using 10%

methan 1 - ethyl acetate as eluent to give the above compound (852 mg) as a waxy solid.

¹H NMR (CDC1₃) 9.26 (s, 1H), 8.78 (s, 2H), 4.46 (dd, 1H), 2.64 (m, 2H), 1.81 (br s, 1H), 1.43 (s, 9H).

5

10

Step D

To a solution of 1.04 g (3.82 mmoles) of m-guanidinohippuric acid in 8 ml of dry dimethylformamide 15 stirring in an ice bath under argon was added dropwise 398 mg (4.01 mmoles) of N-methylpiperidine, producing a white solid. The mixture was stirred for 10 minutes, and then 1.03 g (4.01 mmoles) of disuccinimidyl carbonate was added as a solid. After stirring for 1.5 hours, a clear, 20 homogeneous solution was obtained, to which was added a solution of 852 mg (3.82 mmoles) of the product of Step C. After stirring overnight at room temperature, the mixture was evaporated to dryness. Reverse phase HPLC of the mixture using mixtures of aqueous trifluoroacetic acid -25 acetonitrile followed by evaporation of the appropriate fractions gave the above compound (230 mg) as a white solid.

¹H NMR (CDCl₃ - DMSO) 10.58 (s, 1H), 9.09 (s, 1H), 8.76 30 (s, 2H), 8.57 (t, 1H), 8.49 (d, 1H), 7.79-7.11 (m, 4H), 5.36 (dd, 1H), 4.07 (t, 2H), 2.90 (dd, 1H), 2.79 (dd, 1H), 1.35 (s, 9H).

Step E

230 mg f the product of Step D was diss lved in 20 ml f 1:1 dichl romethane - triflu roacetic acid, and the resulting mixture was stirred overnight at room

- temperature. After evaporation, reverse phase HPLC of the mixture using mixtures of aqueous trifluoroacetic acid acetonitrile followed by evaporation of the appropriate fractions gave the above compound (183 mg) as a white solid.

Preparati n of β -[[2-[[[3-[(aminoiminomethyl)amino]-phenyl]carbonyl]amino]ac tyl]amin]-3-methylthiophene-2-propanoic acid, trifluoroacetate salt

Step A

COO-t-Bu

methylthiophene, 10.5 ml (9.18 g, 71.8 mmoles) of t-butyl acrylate, 15.7 ml (11.4 g, 113 mmoles) of triethylamine, 857 mg of tri-o-tolylphosphine, and 113 mg of palladium acetate in 20 ml of acetonitrile was stirred at reflux under argon for 8 hours. After cooling, the mixture was partitioned between ethyl acetate and water, the aqueous layer was further extracted with ethyl acetate, the combined organic extracts dried over sodium sulfate, filtered, and evaporated to give the above compound (12.7 g) as a dark red oil.

H NMR (CDCl₃) 7.78 (d, J=15Hz, 1H), 7.24 (d, J=6Hz, 1H),

'H NMR (CDCl₃) 7.78 (d, J=15Hz, 1H), 7.24 (d, J=6Hz, 1H), 30 6.87 (d, J=6Hz, 1H), 6.13 (d, J=15Hz, 1H), 2.36 (s, 3H), 1.56 (s, 9H).

5 .

Step B

8.00 g (35.7 mmoles) of the product of Step A was reacted with ammonia by the method of Example 242, Step B.

10 Chromatography of the crude product over silica gel using 50% ethyl acetate - hexane as eluent gave the above compound (1.78 g) as a reddish oil that crystallized on standing.

¹H NMR (CDCl₃) 7.11 (d, 1H), 6.78 (d, 1H), 4.72 (m, 1H), 2.58 (m, 2H), 2.23 (br s, 2H), 2.21 (s, 3H), 1.44 (s, 9H).

Step C

25

1,1-dimethylethyl β-[[2-[[[3-[(aminoiminomethyl)amino]20 phenyl]carbonyl]amino]acetyl]amino]-3-methylthiophene-2propanoate

To a solution of 1.13 g (4.15 mmoles) of m-guanidinohippuric acid in 20 ml of dry dimethylformamide stirring in an ice bath under argon was added dropwise 530 μl (432 mg, 4.36 mmoles) of N-methylpiperidine, producing a white solid. To this mixture was added 1.12 g (4.36

mmoles) f disuccinimidyl carbonate as a solid, and the resulting mixture stirred for 30 minutes, producing a clear soluti n. A solution f 1.00 g (4.15 mm les) f th product of Step B in 8 ml f dimethylformamide was added, the mixture stirred overnight at room temperature. Evaporation of the volatiles gave 3.8 g of residue. Reverse phase HPLC of 1.5 g of the mixture using mixtures of aqueous trifluoroacetic acid - acetonitrile followed by evaporation of the appropriate fractions gave the above compound (171 mg) as an off white solid which was identified by conversion to the acid as described in Step D.

Step D

A solution of 167 mg of the product of Step C in 15 ml of 1:1 dichloromethane - trifluoroacetic acid was stirred overnight at room temperature. Reverse phase HPLC of the residue using mixtures of aqueous trifluoroacetic acid - acetonitrile followed by evaporation of the appropriate fractions gave the above compound (103 mg) as a white solid.

15

Example 249

Preparati n f β -[[2-[[[3-[(amin iminomethyl)amino]-phenyl]carbonyl]amino]acetyl]amino]-3,5-diethoxybenzenepropanoic acid, trifluoroacetate salt

To 3,5-dihydroxybenzaldehyde (10 g) in DMF (100 mL)

was added K₂CO₃ (20 g) and ethyliodide (20 g). The mixture
was stirred for 3 days at 25°C. Water (250 mL) was added
and the product extracted into ethyl acetate. The organic
layer was separated, washed with water, brine and dried
over Na₂SO₄ to give 3,5-diethoxyphenylcarboxaldehyde (12 g)

as a dark oil. This material was used as is for the next
step. MS and H-NMR were consistent with the proposed
structure.

Step B

To 3,5-diethoxyphenylcarboxaldehyde (Step A) (10 g) in ethanol (70 mL) was added ammonium acetate (12.5 g) followed by ethyl hydrogen malonate (6.0 g). The reaction 10 mixture was stirred at reflux for 5 hours. The solution was cooled, and ethanol removed under reduced pressure. Aqueous HCl (100 mL) was added and the mixture partitioned with ethyl acetate. The organic layer was discarded and 15 the acid layer made basic with solid K2CO3. The resulting mixture was partitioned between methylene chloride (150 mL), separated and dried over Na2SO4. The solvent was evaporated to give DL ethyl-3-amino-3-(3,5-diethoxyphenyl) propionate as an oil. Ether (100 mL) was added, followed by HCl in dioxane (20 mL, 4N) and stirred vigorously for 20 one hour. The HCl salt was collected by filtration (6.3 g). MS and H-NMR were consistent with the proposed structure.

25 Step C

30

10

25

30

N,N'-Disuccinimidyl carbonate (DSC) (1.0 g, 0.4 mm l) was added to the compound of Exampl M (1.0 g, 0.4 mmol) in dry dimethylf rmamide (6 mL) f llowed by dimethylaminopyridine (100 mg). After a period of 20 minutes, DL ethyl-3-amino-3-(3,5-diethoxyphenyl) propionate hydrochloride (1.1 g, 0.5 mmol) was added followed by NMM (2.0 mL). After complete reaction (1-16 hours) the product was purified by reverse phase chromatography (water/acetonitrile) to result in a white solid (1.1 g). MS and H-NMR were consistent with the proposed structure.

Step D

DL-ethyl 3-amino-3-(3,5-diethoxyphenyl) propionate adduct (500 mg) produced in Step C was dissolved in water/acetonitrile (1:1), followed by the addition of lithium hydroxide (100 mg). The reaction was allowed to stir at 25°C, and monitored by HPLC. After complete hydrolysis (1-2 hours) trifluoroacetic acid was added until pH = 2. The product was purified by reverse phase chromatography (water/acetonitrile) to result in 255 mg of the title compound as a white solid. MS and H-NMR were consistent with the proposed structure.

10

15

20

25

Example 250

Pr paration $f \beta = [[2-[[3-[(aminoiminomethyl)amino]$ phenyl]carbonyl]amino]acetyl]amino]-4-bromothiophene-2-propanoic acid, trifluoroacetate salt

Step A

To 3-bromothiophene-5-carboxaldehyde (Aldrich) (10 g) in ethanol (70 mL) was added ammonium acetate (2.5 equivalents) followed by ethyl hydrogen malonate (1.1 equivalents). The reaction mixture was stirred at reflux for 5 hours. The solution was cooled, and ethanol removed under reduced pressure. Aqueous HCl (100 mL) was added and the mixture partitioned with ethyl acetate. organic layer was discarded and the acid layer made basic with solid K2CO2. The resulting mixture was partitioned between methylene chloride (150 mL), separated and dried over Na2SO4. The solvent was evaporated to give DL ethyl-30 3-amino-3-(3-bromothiophene) propionate as an oil. Ether (100 mL) was added, followed by HCl in dioxane (20 mL, 4N) and stirred vigorously for one hour. The HCl salt was collected by filtration (6.3 g). MS and H-NMR were consistent with the proposed structure.

Step B

N,N'-Disuccinimidyl carbonate (DSC) (1.0 g, 0.4 mmol) was added to compound H in Scheme VII (1.0 g, 0.4 mmol) in dry dimethylformamide (6 mL) followed by dimethylaminopyridine (100 mg). After a period of 20 minutes DL ethyl-3-amino-3-(3-bromothiophene) propionate hydrochloride (1.1 g, 0.5 mmol) was added followed by NMM (2.0 mL). After complete reaction (1-16 hours) the product was purified by reverse phase chromatography (water/acetonitrile) to result in a white solid (1.1 g). MS and H-NMR were consistent with proposed structure.

20

15

5

10

25

30

35

DL ethyl 3-amino-3-(3-bromothiophene) propionate adduct produced in Step B (500 mg) was dissolved in water/acetonitrile (1:1), followed by the addition of lithium hydroxide (100 mg). The reaction was allowed to stir at 25°C, and monitored by HPLC. After complete hydrolysis (1-2 hours) trifluoroacetic acid was added until pH = 2. The product was purified by reverse phase chromatography (water/acetonitrile) to result in 255 mg of the title compound as a white solid. MS and H-NMR were consistent with the proposed structure.

10

15

Example 251

Preparation $f \beta$ -[[2-[[[3-[(aminoiminomethyl)amino]-phenyl]carbonyl]amino]acetyl]amino]-5-chl rothiophen - 2-propanoic acid, trifluoroacetate salt

Step A

HCI · H₂N CO₂Et

To 2-chlorothiophene-5-carboxaldehyde (Aldrich) (10 g) 20 in ethanol (70 mL) was added ammonium acetate (2.5 equivalents) followed by ethyl hydrogen malonate (1.1 equivalents). The reaction mixture was stirred at reflux for 5 hours. The solution was cooled, and ethanol removed under reduced pressure. Aqueous HCl (100 mL) was added and the mixture partitioned with ethyl acetate. 25 organic layer was discarded and the acid layer made basic with solid K2CO3. The resulting mixture was partitioned between methylene chloride (150 mL), separated and dried over Na2SO4. The solvent was evaporated to give DL ethyl-3-amino-3-(2-chlorothiophene) propionate as an oil. Ether 30 (100 mL) was added, followed by HCl in dioxane (20 mL, 4N) and stirred vigorouosly for one hour. The HCl salt was collected by filtration (6.3 g). MS and H-NMR were consistent with the proposed structure.

Step B

N,N'-Disuccinimidyl carbonate (DSC) (1.0 g, 0.4 mmol) was added to the compound of Example M (1.0 g, 0.4 mmol) in dry dimethylformamide (6 mL) followed by dimethylaminopyridine (100 mg). After a period of 20 minutes DL ethyl-3-amino-3-(2-chlorothiophene) propionate hydrochloride (1.1 g, 0.5 mmol) was added followed by NMM (2.0 mL). After complete reaction (1-16 hours) the product was purified by reverse phase chromatography (water/acetonitrile) to result in a white solid (1.1 g). MS and H-NMR were consistent with the proposed structure.

Step C

20

25

DL-ethyl 3-amino-3-(2-chlorothiophene) propionate adduct produced in Step B (500 mg) was dissolved in water/acetonitrile (1:1), followed by the addition of lithium hydroxide (100 mg). The reaction was allowed to stir at 25°C, and monitored by HPLC. After complete

hydrolysis (1-2 hours) trifluoroacetic acid was added until pH = 2. The product was purified by reverse phase chromatography (water/acetonitrile) to result in 255 mg of the title compound as a whit s lid. MS and H-NMR wer consistent with proposed structure.

10

15

Example 252

Preparation of β -[[2-[[[3-[(amin iminomethyl)amin]-phenyl]carbonyl]amino]acetyl]amino]-1H-pyrazol -3-propanoic acid, trifluoroacetate salt

Step A

To 3-pyrazole carboxaldehyde (Maybridge) (10 g) in ethanol (70 mL) was added ammonium acetate (2.5 20 equivalents) followed by ethyl hydrogen malonate (1.1 equivalents). The reaction mixture was stirred at reflux for 5 hours. The solution was cooled, and ethanol removed under reduced pressure. Aqueous HCl (100 mL) was added and the mixture partitioned with ethyl acetate. The 25 organic layer was discarded and the acid layer made basic with solid K2CO3. The resulting mixture was partitioned between methylene chloride (150 mL), separated and dried over Na2SO4. The solvent was evaporated to give DL ethyl-3-amino-3-(3-pyrazole) propionate as an oil. Ether (100 30 mL) was added, followed by HCl in dioxane (20 mL, 4N) and stirred vigorouosly for one hour. The HCl salt was collected by filtration (6.3 g). MS and H-NMR were consistent with the proposed structure.

Step B

N,N'-Disuccinimidyl carbonate (DSC) (1.0 g, 0.4 mmol)

was added to compound H in Scheme VII (1.0 g, 0.4 mmol) in
dry dimethylformamide (6 mL) followed by
dimethylaminopyridine (100 mg). After a period of 20
minutes DL ethyl-3-amino-3-(3-pyrazole) propionate
hydrochloride (1.1 g, 0.5 mmol) was added followed by NMM

(2.0 mL). After complete reaction (1-16 hours) the
product was purified by reverse phase chromatography
(water/acetonitrile) to result in a white solid (1.1 g).

MS and H-NMR were consistent with the proposed structure.

20 Step C

25

DL-ethyl 3-amino-3-(3-pyrazole) propionate adduct
produced in Step B (500 mg) was dissolved in
water/acetonitrile (1:1), followed by the addition of
lithium hydroxide (100 mg). The reaction was allowed to
stir at 25°C, and monitored by HPLC. After complete
hydrolysis (1-2 hours) trifluoroacetic acid was added

until pH = 2. The product was purified by reverse phase chromatography (water/acetonitril) t result in 255 mg of the title compound as a white solid. MS and H-NMR were consistent with pr posed structure.

5

20

25

30

Step A

Example 253

Preparation of β -[[2-[[[3-[(aminoiminomethyl)amino]-phenyl]carbonyl]amino]acetyl]amino]-5-methylthi phene-2-propancic acid, trifluoroacetate salt

To 5-methythiophene-2-carboxaldehyde (Lancaster) (10 g) in ethanol (70 mL) was added ammonium acetate (2.5 equivalents) followed by ethyl hydrogen malonate (1.1 equivalents). The reaction mixture was stirred at reflux for 5 hours. The solution was cooled, and ethanol removed under reduced pressure. Aqueous HCl (100 mL) was added and the mixture partitioned with ethyl acetate. The organic layer was discarded and the acid layer made basic with solid K2CO3. The resulting mixture was partitioned between methylene chloride (150 mL), separated and dried The solvent was evaporated to give DL ethylover Na,SO4. 3-amino-3-(5-methythiophene) propionate as an oil. Ether (100 mL) was added, followed by HCl in dioxane (20 mL, 4N) and stirred vigorouosly for one hour. The HCl salt was collected by filtration (6.3 g). MS and H-NMR were consistent with the proposed structure.

Step B

N,N'-Disuccinimidyl carbonate (DSC) (1.0 g, 0.4 mmol) was added to the compound of Example M (1.0 g, 0.4 mmol) in dry dimethylformamide (6 mL) followed by dimethylaminopyridine (100 mg). After a period of 20 minutes DL ethyl-3-amino-3-(5-methythiophene) propionate hydrochloride (1.1 g, 0.5 mmol) was added fc'llowed by NMM (2.0 mL). After complete reaction (1-16 hours) the product was purified by reverse phase chromatography (water/acetonitrile) to result in a white solid (1.1 g). MS and H-NMR were consistent with the proposed structure.

Step C

30

25

20

DL-ethyl 3-amino-3-(5-methythiophene) propionate adduct produced in Step B (500 mg) was dissolved in water/acetonitrile (1:1), followed by the addition of lithium hydroxide (100 mg). The reaction was allowed to

stir at 25°C, and m nitored by HPLC. Aft r c mplete hydr lysis (1-2 h urs) triflu roacetic acid was added until pH = 2. The product was purified by reverse phase chromatography (water/acet nitrile) to result in 255 mg of the title compound as a white solid. MS and H-NMR were consistent with the proposed structure.

10

20

Example 260

Preparation of β-[[2-[[[3-[(aminoiminomethyl)amino]-phenyl]carbonyl]amino]acetyl]amino]-3(carboxymethoxy)benzenepropanoic acid,
trifluoroacetate salt

15 Step A

To 3-formyl phenoxyacetic acid (Fisher) (10 g) in ethanol (70 mL) was added ammonium acetate (2.5 equivalents) followed by ethyl hydrogen malonate (1.1 equivalents). The reaction mixture was stirred at reflux for 5 hours. The solution was filtered to give DL ethyl-3-amino-3-(3-formyl phenoxyacetic acid) propionate as an oil (6.3 g). MS and H-NMR were consistent with the proposed structure.

Step B

10

15

20

25

5

N,N'-Disuccinimidyl carbonate (DSC) (1.0 g, 0.4 mmol) was added to the compound of Example M (1.0 g, 0.4 mmol) in dry dimethylformamide (6 mL) followed by dimethylaminopyridine (100 mg). After a period of 20 minutes DL ethyl-3-amino-3-(3-formyl phenoxyacetic acid) propionate (1.1 g, 0.5 mmol) was added followed by NMM (2.0 mL). After complete reaction (1-16 hours) the product was purified by reverse phase chromatography (water/acetonitrile) to result in a white solid (1.1 g). MS and H-NMR were consistent with the proposed structure.

Step C

30

DL ethyl 3-amino-3-(3-formyl phenoxyacetic acid) propionate adduct prepared in Step B (500 mg) was dissolved in water/acetonitrile (1:1), followed by the addition of lithium hydroxide (100 mg). The reaction was

all wed t stir at 25°C, and monitored by HPLC. Aft r complete hydr lysis (1-2 hours) trifluor acetic acid was add d until pH = 2. The product was purified by rev rse phase chr mat graphy (water/acet nitrile) to result in 255 mg of the title compound as a white solid. MS and H-NMR were consistent with the proposed structure.

10

Example 261

Preparation of 3-[[2-[[[3-[(aminoiminomethyl)amin]-phenyl]carbonyl]amino]acetyl]amino]-4,4,4trifluorobutanoic acid, trifluoroacetate salt

Step A

To 3-amino-4,4,4-trifluorobutyric acid (Lancaster)
(2 g) in ethanol (70 mL) was added HCl in dioxane (20 mL,
4N) and stirred vigorously for 16 hours. The solvent was
removed under reduced pressure. The HCl salt was
collected as a solid (2.3 g). MS and H-NMR were
consistent with the proposed structure.

25 <u>Step B</u>

30

N,N'-Disuccinimidyl carbonate (DSC) (1.0 g, 0.4 mmol) was added to th c mpound f Example M (1.0 g, 0.4 mmol) in dry dimethylf rmamide (6 mL) follow d by dimethylaminopyridine (100 mg). After a period of 20 minutes DL ethyl-3-amino-3-(4,4,4-trifluoro) propionate (1.1 g, 0.5 mmol) was added followed by NMM (2.0 mL). After complete reaction (1-16 hours) the product was purified by reverse phase chromatography (water/acetonitrile) to result in a white solid (1.1 g). MS and H-NMR were consistent with the proposed structure.

Step C

10

adduct prepared in Step B (500 mg) was dissolved in water/acetonitrile (1:1), followed by the addition of lithium hydroxide (100 mg). The reaction was allowed to stir at 25°C, and monitored by HPLC. After complete hydrolysis (1-2 hours) trifluoroacetic acid was added until pH = 2. The product was purified by reverse phase chromatography (water/acetonitrile) to result in 255 mg of the title compound as a white solid. MS and H-NMR were consistent with the proposed structure.

Example 262

Preparati n of (±) β -[[2-[[[3-[(aminoiminomethyl)amino]-phenyl]carbonyl]amino]acetyl]amino]-3-bromo-4,5-dimethoxybenzenepropanoic acid, trifluoroacetate salt

15

10

5

Step A

To 3-bromo-4,5-dimethoxy benzaldehyde (Aldrich) (10
25 g) in ethanol (70 mL) was added ammonium acetate (2.5
equivalents) followed by ethyl hydrogen malonate (1.1
equivalents). The reaction mixture was stirred at reflux
for 5 hours. The solution was cooled, and ethanol removed
under reduced pressure. Aqueous HCl (100 mL) was added
30 and the mixture partitioned with ethyl acetate. The
organic layer was discarded and the acid layer made basic
with solid K₂CO₃. The resulting mixture was partitioned
between methylene chloride (150 mL), separated and dried
over Na₂SO₄. The solvent was evaporated to give DL ethyl-

3-amin -3-(3-bromo-4,5-dimethoxyphenyl) propi nate as an il (6.3 g). MS and H-NMR were c nsistent with the proposed structure.

5 Step B

15

20

25

10

N,N'-Disuccinimidyl carbonate (DSC) (1.0 g, 0.4 mmol) was added to the compound of Example M (1.0 g, 0.4 mmol) in dry dimethylformamide (6 mL) followed by dimethylaminopyridine (100 mg). After a period of 20 minutes DL ethyl-3-amino-3-(2-bromo-4,5-dimethoxyphenyl) propionate (1.1 g, 0.5 mmol) was added followed by NMM (2.0 mL). After complete reaction (1-16 hours) the product was purified by reverse phase chromatography (water/acetonitrile) to result in a white solid (1.1 g). MS and H-NMR were consistent with the proposed structure.

Step C

10

4

DL-ethyl 3-amino-3-(3-bromo-4,5-dimeth xyphenyl) propi nat adduct prepared in St p B (500 mg) was dissolved in water/acetonitrile (1:1), followed by the addition of lithium hydr xide (100 mg). The reaction was allowed to stir at 25°C, and monitored by HPLC. After complete hydrolysis (1-2 hours) trifluoroacetic acid was added until pH = 2. The product was purified by reverse phase chromatography (water/acetonitrile) to result in 255 mg of the title compound as a white solid. MS and H-NMR were consistent with the proposed structure.

Pr paration of 3-[[2-[[[3-[(aminoiminomethyl)-amino]phenyl]carbonyl]amino]acetyl]amino]-4-methylpentanoic acid, trifluoroacetate salt

Step A

15

10

5

DL ethyl-3-amino-3-(isopropyl) propionate was prepared by the method of Example 53, Step A substituting isopropylacetoacetate (10 g) for dimethyl-3-ketoglutarate. MS and H-NMR were consistent with the proposed structure.

Step B

25

30

20

N,N'-Disuccinimidyl carbonate (DSC) (1.0 g, 0.4 mmol) was added to the compound of Example M (1.0 g, 0.4 mmol) in dry dimethylformamide (6 mL) followed by dimethylaminopyridine (100 mg). After a period of 20 minutes DL ethyl-3-amino-3-(isopropyl) propionate (1.1 g, 0.5 mmol) was added followed by NMM (2.0 mL). After complete reaction (1-16 hours) the product was purified by

r verse phase chr matography (wat r/acet nitrile) to result in a white solid (1.1 g). MS and H-NMR were c nsistent with th prop sed structure.

5 Step C

10

DL ethyl 3-amino-3-(isopropyl) propionate adduct prepared in Step B (500 mg) was dissolved in water/acetonitrile (1:1), followed by the addition of lithium hydroxide (100 mg). The reaction was allowed to stir at 25°C, and monitored by HPLC. After complete hydrolysis (1-2 hours) trifluoroacetic acid was added until pH = 2. The product was purified by reverse phase chromatography (water/acetonitrile) to result in 255 mg of the title compound as a white solid. MS and H-NMR were consistent with the proposed structure.

Example 264

Preparation f 3-[[2-[[[3-[(aminoiminomethyl)-amino]phenyl]carbonyl]amino]acetyl]amino]-pentanoic acid, trifluoroacetate salt

10

5

Step A

15

20

DL ethyl-3-amino-3-(3-ethyl) propionate was prepared by the method of Example 53. Step A, substituting ethylacetoacetate (10 g) for dimethyl-3-ketoglutarate. MS and H-NMR were consistent with the proposed structure.

Step B

N,N'-Disuccinimidyl carbonate (DSC) (1.0 g, 0.4 mmol)
was added to the compound of Example M (1.0 g, 0.4 mmol)
in dry dimethylformamide (6 mL) followed by
dimethylaminopyridine (100 mg). After a period of 20
minutes DL ethyl-3-amino-3-(ethyl) propionate (1.1 g, 0.5
mmol) was added followed by NMM (2.0 mL). After complete

r acti n (1-16 h urs) the product was purified by reverse phase chromat graphy (water/acet nitrile) t result in a white solid (1.1 g). MS and H-NMR were c nsistent with the prop sed structure.

5

Step C

DL-ethyl 3-amino-3-(ethyl) propionate adduct prepared in Step B (500 mg) was dissolved in water/acetonitrile

(1:1), followed by the addition of lithium hydroxide (100 mg). The reaction was allowed to stir at 25°C, and monitored by HPLC. After complete hydrolysis (1-2 hours) trifluoroacetic acid was added until pH = 2. The product was purified by reverse phase chromatography

(water/acetonitrile) to result in 255 mg of the title compound as a white solid. MS and H-NMR were consistent with the proposed structure.

15 Step A

DL-3-bromo-5-chloro-2-hydroxy aminocoumarin

hydrochloride was prepared according to Scheme XIV. The method of G. Casiraghi, et al. J. Chem. Soc. Perkin Trans 1 p.318, 1978, was employed for the preparation of the 4-bromo-2-chlorosalicylic aldehyde and 6-bromo-8-chloro-coumarin was prepared by the method of Vogel's The

Textbook of Practical Organic Chemistry, fifth edition p. 1040. The amino coumarin was prepared by the method cited in Example 87 using 7-chloro-5-bromo coumarin (7 g). MS and H-NMR were consistent with the proposed structure.

10

15

Step B

N,N'-Disuccinimidyl carbonate (DSC) (1.0 g, 0.4 mmol) was added to the compound of Example M (1.0 g, 0.4 mmol) in dry dimethylformamide (6 mL) followed by dimethylaminopyridine (100 mg). After a period of 20 minutes DL-3-bromo-5-chloro-2-hydroxy aminocoumarin hydrochloride (1.1 g, 0.5 mmol) was added followed by NMM (2.0 mL). After complete reaction (1-16 hours) the product was purified by reverse phase chromatography (water/acetonitrile) to result in a white solid (1.1 g). MS and H-NMR were consistent with the proposed structure.

Step C

20

25

DL-3-bromo-5-chloro-2-hydroxy aminolactone adduct prepared in Step B (500 mg) dissolved in

water/acetonitrile slowly opened to form a (2-hydroxy acid) resulting in 255 mg of the title compound as a white solid after purification by reverse phase chromatography and lyophylization as its TFA salt. MS and H-NMR were consistent with the proposed structure.

Example 266

Preparati n f β-[[2-[[[3-[[[(4-pyridinylmethyl)-amino]carbonyl]amino]phenyl]carbonyl]amino]-acetyl]amino]pyridine-3-propanoic acid,
(bis)trifluoroacetate salt

Step A

25

30

Glycine tert-butyl ester (20 g, 119 mmol) was added to water (200 mL) followed by potassium carbonate (20 g, 180 mmol) and cooled to 0°C in an ice bath. To this solution 3-nitrobenzoyl chloride (20 g, 108 mmol) was added in acetonitrile (20 mL) drop-wise over a 10 minute period. After complete reaction (3-4 hours) concentrated hydrochloric acid was added until pH=3 followed by saturated aqueous NaCl (75 mL). The product was filtered, washed with water and air dried (22 g, 90% yield). MS and H-NMR were consistent with the proposed structure.

10

15

20

Step B

tert-Butyl(3-nitrobenzoyl) glycinate (1.0 g) was added to absolute ethanol (60 mL) in a Parr jar. Palladium on carbon 5% (1 mg) was added and the mixture was hydrogenolyzed under 50 psi in a Parr apparatus for a period of 2.5 hours. After complete reaction the palladium catalyst was removed by filtration through a plug of celite. The solvent was removed under reduced pressure and the sample dried in vacuo. Dimethylformamide (25 mL) was added to the crude aniline tert-butyl ester followed by triethylamine (1.5 equivalents) and cooled to 0°C. Phenyl chloroformate (6.5 g, 1.1 equivalents) was added and the reaction stirred for 2 hours. Water was added and the solid was filtered to give the phenyl carbamate tert-butyl ester as a white solid (12.5 g, 99% yield). MS and H-NMR were consistent with the proposed structure.

Step C

25

Dimethylformamide (25 mL) was added to the phenyl carbamate tert-butyl ester from Step B followed by 4-pyridylmethylamine (1.1 equivalents). The reaction was heated at 70°C with stirring for 2 hours and stirred at 25°C for 12 hours. Water was added, and the mixture

partitioned between ethyl acetate, separated and washed with brine and dri d over Na_2SO_4 to give an oil (6 g). MS and H-NMR were consistent with the proposed structur.

5 Step D

10

15

The compound from Step C (6 g) was dissolved in dioxane (25 mL). To this solution HCl in dioxane (20 mL, 4N) was added. The solution was stirred for 12 hours and the solvent was removed under reduced pressure followed by the addition of ether. The solid was filtered and dried in a vacuum oven for 12 hours.

Step E

20

25

30

N,N'-disuccinimidyl carbonate (DSC) (1.0 g, 0.4 mmol) was added to the compound produced in Step D (1.0 g, 0.4 mmol) in dry dimethylformamide (6 mL) followed by addition of dimethylaminopyridine (100 mg). After a period of 20 minutes DL-ethyl 3-amino-3-pyridyl propionate

hydr chloride (1.1 g, 0.5 mmol) was added f llowed by NMM (2.0 mL). After complete reaction (1-16 hours) the product was purified by reverse phase chromatography (water/acet nitrile) to result in a white solid (1.1 g). MS and H-NMR were consistent with the proposed structure.

Step F

5

20

DL-ethyl 3-amino-3-pyridyl propionate adduct produced in Step E (500 mg) was dissolved in water/acetonitrile (1:1), followed by the addition of lithium hydroxide (100 mg). The reaction was allowed to stir at 25°C and monitored by HPLC. After complete hydrolysis (1-2 hours) trifluoroacetic acid was added until pH = 2. The product was purified by reverse phase chromatography 25 (water/acetonitrile) to result in 255 mg of the title compound as a white solid. MS and H-NMR were consistent with the proposed structure.

10

15

25

Example 267

Pr paration f 3,5-dichl ro-β-[[2-[[[3-[[[(4-pyridinylmethyl)amino]carbonyl]amino]phenyl]-carbonyl]amino]acetyl]amino]benzenepropanoic acid, trifluoroacetate salt

Step A

N,N'-disuccinimidyl carbonate (DSC) (1.0 g, 0.4 mmol)

was added to the compound produced in Step B, Example 268
(1.0 g, 0.4 mmol) in dry dimethylformamide (6 mL) followed
by addition of dimethylaminopyridine (100 mg). After a
period of 20 minutes DL-ethyl 3-amino-3-(1,3dichlorophenyl) propionate hydrochloride (1.1 g, 0.5 mmol)

was added followed by NMM (2.0 mL). After complete reaction (1-16 hours) the product was purified by reverse phase chromatography (water/acetonitrile) to result in a white solid (1.0 g). MS and H-NMR were consistent with the proposed structure.

Step B

5

DL-ethyl 3-amino-3-(1,3-dichlorophenyl' propionate adduct produced in Step A (500 mg) was dissolved in water/acetonitrile (1:1), followed by the addition of lithium hydroxide (100 mg). The reaction was allowed to stir at 25°C, and monitored by HPLC. After complete hydrolysis (1-2 hours) trifluoroacetic acid was added until pH = 2. The product was purified by reverse phase chromatography (water/acetonitrile) to result in 315 mg of the title compound as a white solid. MS and H-NMR were consistent with the proposed structure.

30

Example 268

Preparation $f \beta$ -[[2-[[[3-[[[(2-pyridinylmethyl)amino]-carbonyl]amino]phenyl]carbonyl]amino]acetyl]amino]-pyridine-3-propanoic acid, (bis)trifluoroacetate salt

Step A

ON HUH CO₂

Dimethylformamide (25 mL) was added to the phenyl carbamate tert-butyl ester from Example 266, Step B, followed by 2-pyridylmethylamine (1.1 equivalents.) and the reaction was heated at 70°C with stirring for 2 hours and stirred at 25°C for 1- 2 hours. Water was added and the mixture partioned between ethyl acetate, separated, washed with brine and dried over Na₂SO₄ to give an oil (6 g). MS and H-NMR were consistent with the proposed structure.

Step B

The compound produced in Step A (6g) was disolved in dioxane (25 mL). To this solution HCl in dioxane (20 mL, 4N) was added. The solution was stirred for 1-2 hours. The solvent was removed under reduced pressure followed by addition of ether. The solid was filtered and dried in a vacuum oven for 12 hours.

Step C

15

10

5

20

N,N'-Disuccinimidyl carbonate (DSC) (1.0 g, 0.4 mmol) was added to the compound produced in Step B (1.0 g, 0.4 mmol) in dry dimethylformamide (6 mL) followed by addition of dimethylaminopyridine (100 mg). After a period of 20 minutes DL-ethyl 3-amino-3-pyridyl propionate hydrochloride (1.1 g, 0.5 mmol) was added followed by NMM (2.0 mL). After complete reaction (1-16 hr) the product was purified by reverse phase chromatography

(water/acetonitrile) to result in a white solid (1.1 g). MS and H-NMR were consistent with the proposed structure.

Step D

10

15

20

5

DL-ethyl 3-amino-3-pyridyl propionate adduct produced in Step C (500 mg) was dissolved in water/acetonitrile (1:1), followed by the addition of lithium hydroxide (100 mg). The reaction was allowed to stir at 25°C, and monitored by HPLC. After complete hydrolysis (1-2 hours) trifluoroacetic acid was added until pH = 2. The product was purified by reverse phase chromatography (water/acetonitrile) to result in 550 mg of the title compound as a white solid. MS and H-NMR were consistent with the proposed structure.

10

15

20

Example 269

Pr parati n f 3,5-dichloro-β-[[2-[[[3-[[(phenylmethyl)amino]carbonyl]amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid, monohydrate

Step A

tert-butyl(3-nitrobenzoyl) glycinate (10 g) was added to absolute ethanol (60 mL) in a Parr jar. Palladium on carbon 5% (1 mg) was added and the mixture was

25 hydrogenolyzed under 50 psi in a Parr apparatus for a period of 2.5 hours. After complete reaction the palladium catalyst was removed by filtration through a plug of celite. The solvent was removed under reduced pressure and the sample dried in vacuo.

Step B

Acetonitrile (50 mL) was added to the crude aniline (10 g) produced in Step A followed by benzyl isocyanate (7.0 g). The solution was warmed to 70°C for 2 hours, and the solvent removed. Diethyl ether was added and the solid was filtered to give the benzyl urea tert-butyl ester as a salmon colored solid (12.6 g).

Step C

15

10

5

20

The compound produced in Step B (6 g) was disolved in dioxane (25 mL). To this solution HCl in dioxane (20 mL, 4N) was added. The solution was stirred for 12 hours and the solvent was removed under reduced pressure followed by addtion of ether. The solid was filtered and dried in a vacuum oven for 12 hours.

Step D

N,N'-disuccinimidyl carbonate (DSC) (1.0 g, 0.4 mmol) was added to compound produced in Step C (1.0 g, 0.4 mmol) in dry dimethylformamide (6 mL) followed by addition of dimethylaminopyridine (100 mg). After a period of 20 min DL-ethyl 3-amino-3-(1,3-dichlorophenyl) propionate hydrochloride (1.1 g, 0.5 mmol) was added followed by NMM (2.0 mL). After complete reaction (1-16 hours) the product was purified by reverse phase chromatography (water/acetonitrile) to result in a white solid (1.2 g). MS and H-NMR were consistent with the proposed structure.

Step E

15

20

DL-ethyl 3-amino-3-(1,3-dichlorophenyl) propionate adduct produced in Step D (500 mg) was dissolved in water/acetonitrile (1:1), followed by the addition of

lithium hydroxide (100 mg). The reaction was allowed to stir at 25°C, and monit red by HPLC. After complete hydrolysis (1-2 h urs) trifluoroacetic acid was added until pH = 2. The product was purified by reverse phase chromatography (water/acetonitrile) to result in 250 mg of the title compound as a white solid. Ms and H-NMR was consistent with the proposed structure.

10

15

20

30

Example 270

Preparation of 3-chloro-β-[[2-[[[3-[[[(ph nylmethyl)amino]carbonyl]amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid, monohydrate

Step A

N,N'-disuccinimidyl carbonate (DSC) (1.0 g, 0.4 mmol) was added to the compound produce of Step C, Example 269 (1.0 g, 0.4 mmol) in dry dimethylformamide (6 mL) followed by addition of dimethylaminopyridine (100 mg). After a period of 20 minutes DL-ethyl 3-amino-3-(3-chlorophenyl) propionate hydrochloride (1.1 g, 0.5 mmol) was added followed by NMM (2.0 mL). After complete reaction (1-16 hours) the product was purified by reverse phase

chromatography (water/acetonitrile) to result in a white solid (0.9 g). MS and H-NMR were c nsistent with th proposed structure.

5 Step B.

DL-ethyl 3-amino-3-(3-chlorophenyl) propionate adduct produced in Step A (500 mg) was dissolved in water/acetonitrile (1:1), followed by the addition of lithium hydroxide (100 mg). The reaction was allowed to stir at 25°C, and monitored by HPLC. After complete hydrolysis (1-2 hours) trifluoroacetic acid was added until pH = 2. The product was purified by reverse phase chromatography (water/acetonitrile) to result in 350 mg of the title compound as a white solid. MS and H-NMR were consistent with the proposed structure.

25

30

Example 271

Preparation of β-[[2-[[[3-[[(1-phenylethyl)amin]carb nyl]amin]phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoic acid,
trifluoroacetate salt

Step A

Dimethylformamide (25 mL) was added to the phenyl carbamate tert-butyl ester from Step B of Example 266 followed by α -methyl benzylamine (1.1 equivalents). The reaction was heated at 70°C with stiring for 2 hours and stirred at 25°C for 1-2 hours. Water was added, the mixture partitioned between ethyl acetate, separated, washed with brine and dried over Na₂SO₄. to give an oil (6 g). MS and H-NMR were consistent with the proposed structure.

Step B

The compound produced in Step A (6g) was dissolved in methylene chloride (50 mL). To this solution TFA (20 mL) was added. The solution was stirred for 12 hours. The solvent was removed under reduced pressure followed by addition of ether. The solid was filtered and dried in a vacuum oven for 1-2 hours.

15

10

5

Step C

25

30

20

N,N'-disuccinimidyl carbonate (DSC) (1.0 g, 0.4 mmol) was added to the compound produced in Step B (1.0 g, 0.4 mmol) in dry dimethylformamide (6 mL) followed by addition of dimethylaminopyridine (100 mg). After a period of 20 minutes, DL-ethyl 3-amino-3-pyridylpropionate hydrochloride (1.1 g, 0.5 mmol) was added followed by NMM (2.0 mL). After complete reaction (1-16 hours) the product was purified by reverse phase chromatography

(water/acet nitrile) to r sult in a white s lid (1.0 g). MS and H-NMR were consistent with the prop sed structure.

Step D

DL-ethyl 3-amino-3-pyridyl propionate adduct produced in Step C (500 mg) was dissolved in water/acetonitrile (1:1), followed by the addition of lithium hydroxide (100 mg). The reaction was allowed to stir at 25°C, and monitored by HPLC. After complete hydrolysis (1-2 hours) trifluoroacetic acid was added until pH = 2. The product was purified by reverse phase chromatography (water/acetonitrile) to result in 150 mg of the title compound as a white solid. MS and H-NMR were consistent with the proposed structure.

Example 272

Preparation of β -[[2-[[[3-[[[(1H-benzimidazol-2-yl)-methyl)amino]carbonyl]amino]phenyl]carbonyl]amino]-acetyl]amino]-3,5-dichlorobenzenepropanoic acid, trifluoroacetate salt

Step A

Dimethylformamide(25 mL) was added to the phenyl carbamate tert-butyl ester from Step B of Example 266, followed by addition of 2-aminomethyl benzimidazole (Aldrich) (1.1 equivalents). The reaction was heated to 70°C with stirring for 2 hours and stirred at 25°C for 1-2 hours. Water was added and the mixture partitioned between ethyl acetate, separated, washed with brine and dried over Na₂SO₄ to give an oil (6 g). MS and H-NMR was consistent with the proposed structure.

Step B

The compound produced in Step A (6 g) was dissolved in methylene chloride (50 mL). To this mixture TFA (20 mL) was added. The mixture was stirred for 1-2 hours. The solvent was removed under reduced pressure followed by addition of ether. The solid was filtered and dried in a vacuum oven for 1-2 hours.

Step C

15

5

10

25

30

20

N,N'-disuccinimidyl carbonate (DSC) (1.0 g, 0.4 mmol) was added to the compound produced in Step B (1.0 g, 0.4 mmol) in dry dimethylformamide (6 mL) followed by addition of dimethylaminopyridine (100 mg). After a period of 20 minutes, DL-ethyl 3-amino-3-(1,3-dichlorophenyl) propionate hydrochloride (1.1 g, 0.5 mmol) was added followed by NMM (2.0 mL). After complete reaction (1-16 hours) the product was purified by reverse phase chromatography (water/acetonitrile) to result in a

white solid (0.8 g). MS and HNMR were consistent with the prop sed structure.

Step D

DL-ethyl 3-amino-3-(1,3-dichlorophenyl) propionate adduct produced in Step C (500 mg) was dissolved in water/acetonitrile (1:1), followed by the addition of lithium hydroxide (100 mg). The reaction was allowed to stir at 25°C, and monitored by HPLC. After complete hydrolysis (1-2 hours) trifluoroacetic acid was added until pH = 2. The product was purified by reverse phase chromatography (water/acetonitrile) to result in 125 mg of the title compound as a white solid. MS and H-NMR were consistent with the proposed structure.

Example 273

Preparation f β-[[2-[[[3-[[[[(3,5-dichl rophenyl)methyl]amin]carbonyl]amino]-phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoic acid, trifluoroacetate salt

Step A

Dimethylformamide (25 mL) was added to the phenyl carbamate tert-butyl ester from Step B of Example 266, followed by addition of 3,5-dichlorobenzyl amine (Lancaster) (1.1 equivalents). The reaction was heated at 70°C with stiring for 2 hours and stirred at 25°C for 1-2 hours. Water was added and the mixture partitioned between ethyl acetate, separated, washed with brine and dried over Na₂SO₄. to give an oil (6 g). MS and H-NMR was consistent with the proposed structure.

10

15

20

25

30

Step B

The compound produced in Step A (6g) was dissolved in methylene chloride (50 mL). To this mixture TFA (20 mL, 4N) was added. The mixture was stirred for 1-2 hours. The solvent was removed under reduced pressure followed by addition of ether. The solid was filtered and dried in a vacuum oven for 1-2 hours.

Step C

N,N'-disuccinimidyl carbonate (DSC) (1.0 g, 0.4 mmol) was added to the compound produced in Step B (1.0 g, 0.4 mmol) in dry dimethylformamide (6 mL) followed by addition of dimethylaminopyridine (100 mg). After a period of 20 minutes, DL-ethyl 3-amino-3-(pyridyl) propionate hydrochloride (1.1 g, 0.5 mmol) was added followed by NMM (2.0 mL). After complete reaction (1-16 hours) the product was purified by reverse phase chromatography (water/acetonitrile) to result in a white

solid (0.8 g). MS and H-NMR was consistent with the proposed structure.

Step D

DL-ethyl 3-amino-3-(pyridyl) propionate adduct produced in Step C (500 mg) was dissolved in water/acetonitrile (1:1), followed by the addition of lithium hydroxide (100 mg). The reaction was allowed to stir at 25°C, and monitored by HPLC. After complete hydrolysis (1-2 hours) trifluoroacetic acid was added until pH = 2. The product was purified by reverse phase chromatography (water/acetonitrile) to result in 125 mg of the title compound as a white solid. MS and H-NMR were consistent with the proposed structure.

Example 275

Preparation of β -[[2-[[[3-[(aminoimin m thyl)amin]phenyl]carbonyl]amin]acetyl]amino]-3,5-bis(1-methylethoxy) benzenepropanoic acid, trifluoroacetate salt

Step A

CHO 15

To 3,5-dihydroxybenzaldehyde (1 0.g) in acetone (100 mL) was added K_2CO_3 (20 g) and isopropyliodide (20 g). mixture was heated at reflux and stirred for 2 days. Water (250 mL) was added and the product extracted into ethyl acetate. The organic layer was separated, washed with water, brine and dried over Na2SO4 to give 3,5-25 diisopropyloxyphenylcarboxaldehyde (12 g) as a dark oil. This material was used as is for the next step. MS and H-NMR were consistent with the proposed structure.

Step B

30

10

15

30

T 3,5-diisopr pyloxyphenylcarboxaldehyde (Step A) (10.g) in ethanol (70 mL) was added ammonium acetate (12.5 g) followed by additi n of ethyl hydrogen mal nate The reaction mixtur was stirred at reflux for 5 hours. The mixture was cooled, and ethanol removed under reduced pressure. Aqueous HCl (100 mL) was added and the mixture partitioned with ethyl acetate. the organic layer was discarded and the acid layer made basic with solid The resulting mixture was partitioned between methylene chloride (150 mL), separated and dried over Na₂SO₄. The solvent was evaporated to give DL ethyl-3amino-3-(3,5diisopropylphenyl) propionate as an oil. Ether (100 mL) was added, followed by addition of HCl in dioxane (20 mL, 4N) and stirred vigorously for one hour. The HCl salt was collected by filtration (4.3 g). H-NMR were consistent with the proposed structure.

Step C

N,N'-disuccinimidyl carbonate (DSC) (1.0 g, 0.4 mmol) was added to the compound of Example M (1.0 g, 0.4 mmol) in dry dimethylformamide (6 mL) followed by addition of dimethylaminopyridine (100 mg). After a period of 20 minutes DL ethyl 3-amino-3-(3,5-diisopropyloxyphenyl) propionate hydrochloride (1.1 g, 0.5 mmol) was added followed by addition of NMM (2.0 mL). After complete reaction (1-16 hours) the product was purified by reverse

phase chromatography (water/acetonitrile) to result in a whit solid (0.8 g). MS and H-NMR were consistent with the proposed structure.

5 Step D

10

15

DL ethyl-3-amino-3-(3,5-diisopropyloxyphenyl) propionate adduct produced in Step C (500mg) was dissolved in water/acetonitrile (1:1), followed by the addition of lithium hydroxide (100 mg). The reaction was allowed to stir at 25°C, and monitored by HPLC. After complete hydrolysis (1-2 hours) trifluoroacetic acid was added until pH = 2. The product was purified by reverse phase chromatography (water/acetonitrile) to result in 625 mg of the title compound as a white solid. MS and H-NMR were consistent with the proposed structure.

Example 276

Preparation $f \beta$ -[[2-[[[3-[(amin iminomethyl)amin]-phenyl]carbonyl]amin]acetyl]amin]-3,5-dibrom -4-hydroxybenzenepropanoic acid, trifluoroacetate salt

Step A

15

10

5

20

25

30

To 4-hydroxy-3,5-dibromobenzaldehyde (Aldrich) (10 g) in ethanol (70 mL) was added ammonium acetate (2.5 equivalents) followed by addition of ethyl hydrogen malonate (1.1 equivalents). The reaction mixture was stirred at reflux for 5 hours. The mixture was cooled, and ethanol removed under reduced pressure. Aqueous HCl (100 mL) was added and the mixture partitioned with ethyl acetate. The organic layer was discarded and the acid layer made basic with solid K₂CO₃. The resulting mixture was partitioned between methylene chloride (150 mL), separated and dried over Na₂SO₄. The solvent was evaporated to give DL ethyl-3-amino-3-(4-hydroxy-3,5-dibromophenyl) propionate as a solid and was collected by

filtration (1.3 g). MS and H-NMR were consistent with th proposed structure.

Step B

5

;

10

15

20

N,N'-disuccinimidyl carbonate (DSC) (1.0 g, 0.4 mmol) was added to the compound of Example M (1.0 g, 0.4 mmol) in dry dimethylformamide (6 mL) followed by addition of dimethylaminopyridine (100 mg). After a period of 20 minutes DL ethyl-3-amino-3-(4-hydroxy-3,5-dibromophenyl) propionate hydrochloride (1.1 g, 0.5 mmol) was added followed by addition of NMM (2.0 mL). After complete reaction (1-16 hours) the product was purified by reverse phase chromatography (water/acetonitrile) to result in a white solid (.89 g). MS and H-NMR were consistent with the proposed structure.

25

30

Step C

DL ethyl-3-amino-3-(4-hydroxy-3,5-dibromophenyl) propionate adduct produced in Step B (500 mg) was dissolved in water/acetonitrile (1:1), followed by the addition of lithium hydroxide (100 mg). The reaction was allowed to stir at 25°C, and monitored by HPLC. After complete hydrolysis (1-2 hours) trifluoroacetic acid was added until pH = 2. The product was purified by reverse phase chromatography (water/acetonitrile) to result in 425

mg f the title compound as a white solid. MS and H-NMR were consistent with the pr posed structure.

Example 277

Preparation of β -[[2-[[[3-[(aminoiminomethyl)amino]-phenyl]carbonyl]amino]acetyl]amin]-3,5-dichloro-4-hydroxybenzenepropanoic acid, trifluoroacetate salt

15 Step A

To 4-hydroxy-3,5-dichlorobenzaldehyde (Aldrich) (10 g) in ethanol (70 mL) was added ammonium acetate (2.5 equivalents) followed by addition of ethyl hydrogen malonate (1.1 equivalents). The reaction mixture was stirred at reflux for 5 hours. The mixture was cooled, and ethanol removed under reduced pressure. Aqueous HCl (100 mL) was added and the mixture partitioned with ethyl acetate. The organic layer was discarded and the acid layer made basic with solid K₂CO₃. The resulting mixture was partitioned between methylene chloride (150 mL), separated and dried over Na₂SO₄. The solvent was evaporated to give DL ethyl-3-amino-3-(4-hydroxy-3,5-

dichlor ph nyl) propi nate as solid (2.5 g). MS and H-NMR were c nsist nt with th proposed structure.

Step B

5

10

15

20

N,N'-disuccinimidyl carbonate (DSC) (1.0 g, 0.4 mmol) was added to the compound of Example M (1.0 g, 0.4 mmol) in dry dimethylformamide (6 mL) followed by addition of dimethylaminopyridine (100 mg). After a period of 20 minutes DL ethyl-amino-3-(4-hydroxy-3,5-dichlorophenyl) propionate hydrochloride (1.1 g, 0.5 mmol) was added followed by addition of NMM (2.0 mL). After complete reaction (1-16 hours) the product was purified by reverse phase chromatography (water/acetonitrile) to result in a white solid (0.9 g). MS and H-NMR were consistent with the proposed structure.

25

30

Step C

DL-ethyl-amino-3-(4-hydroxy-3,5-dichlorophenyl) propionate adduct prepared in Step B (500 mg) was dissolved in water/acetonitrile (1:1), followed by the addition of lithium hydroxide (100 mg). The reaction was allowed to stir at 25°C, and monitored by HPLC. After complete hydrolysis (1-2 hours) trifluoroacetic acid was added until pH = 2. The product was purified by reverse phase chromatography (water/acetonitrile) to result in 325

mg of the titl comp und as a white solid. MS and H-NMR wer consistent with the pr pos d structure.

Example 278

Preparation of β -[[2-[[[3-[(5,6-dihydro-4H-thiazin-2-yl) amin]phenyl]carbonyl]amin]acetyl]amino]pyridin -3-propanoic acid, bis(trifluoroacetate) salt

Step A

The compound prepared in Example 104 (2.0 g) was added to absolute ethanol (60 mL) in a Parr jar. Palladium on carbon 5% (500 mg) was added and the mixture was hydrogenolyzed under 50 psi in a Parr apparatus for a period of 2.5 hours. After complete reaction the palladium catalyst was removed by filtration through a plug of calita. The solvent was removed under reduced pressure and the sample dried in vacuo.

Step B

10

5

The compound prepared in Step A was added to acetonitrile (20 mL) followed by addition of 2-methyl thiodihydro-1,3-thiazine (2.0 g) [prepared according to J. Chem. Soc. Perkin Transaction, 1943, p.243-245] and heated for 4 hours. After complete reaction water was added and the product was purified by reverse phase chromatography (water/acetonitrile) to result in a white solid (1.3 g). MS and H-NMR were consistent with the proposed structure.

20

25

30

15

Step C

DL-ethyl 3-amino-3(pyridyl) propionate thiazine adduct prepared in Step B (700 mg) was dissolved in water/acetonitrile (1:1), followed by the addition of lithium hydroxide (100 mg). The reaction was allowed to stir at 25°C, and monitored by HPLC. After complete hydrolysis (1-2 hours) trifluoroacetic acid was added until pH = 2. The product was purified by reverse phase chromatography (water/acetonitrile) to result in 520 mg of the title compound as a white solid. MS and H-NMR were consistent with the proposed structure.

10

Example 279

Pr paration of β -[[2-[[[5-[(aminoiminomethyl)amin]-2-hydroxyphenyl]carbonyl]amino]ac tyl]amin]-3,5-dichlorobenzenepropanoic acid, trifluoroacetate salt

Step A

15 CO₂H

Amino salicylic acid (10 g), K₂CO₃ (10 g), and

di-tert-butoxycarbonate (12 g) were placed in a flask
containing water/acetonitrile (100 mL, (1:1)). The course
of the reaction was monitored by RPHPLC. After complete
reaction dilute aqueous HCl was added (pH = 4), the
product was separated from mixture, and filtered resulting
in a tan-red solid (15 g). The compound was dried in an
oven at 70°C for 16 hours. MS and H-NMR were consistent
with the proposed structure.

Step B

30

35

N,N'-disuccinimidyl carbonat (DSC) (2.0 g, 0.8 mmol) was added to the N-B c c mp und produced in Step A (2.0 g, 0.4 mmol) in dry dimethylf rmamide (4 mL) f llowed by additi n of dimethylamin pyridin (100 mg). After a period of 20 minutes, ethyl glycinate hydrochloride (2.1 g, 0.9 mmol) was added followed by addition of DIEA (2.0 mL). After complete reaction (2 hours) the product was extracted with ethyl acetate (100 mL) washed with aqueous HCl, brine and dried over Na₂SO₄ to give a dark oil (2.5 g). MS and H-NMR were consistent with the proposed structure.

Step C

15

30

10

٠

Ethyl glycinate N-Boc benzamide adduct produced in

Step B (2 9) was dissolved in water/acetonitrile (1:1),
followed by the addition of lithium hydroxide (200 mg).

The reaction was allowed to stir at 25°C, and monitored by
HPLC. After complete hydrolysis (1-2 hours) hydrochloric
acid was added until pH = 4. The product was extracted

with ethyl acetate (100 mL) washed with aqueous HCl, brine
and dried over Na₂SO₄ to give a dark oil. The oil was
vigorously stirred with ether to result in a solid (1.9 g)
after filtration and dried in a vacum oven for 16 hours.

MS and H-NMR were consistent with the proposed structure.

Step D

5 .

N,N'-disuccinimidyl carbonate (DSC) (1.0 g, 0.4 mmol) was added to the glycine compound produced in Step C (1.0 g, 0.4 mmol) in dry dimethylformamide (6 mL) followed by addition of dimethylaminopyridine (100 mg). After a period of 20 minutes DL ethyl-3-amino-3-(3,5-dichlorophenyl) propionate hydrochloride (1.1 g, 0.5 mmol) was added followed by addition of NMM (2.0 mL). After complete reaction (1-16 hours) the product was purified by reverse phase chromatography (water/acetonitrile) to result in a white solid (0.9 g). MS and H-NMR were consistent with the proposed structure.

Step E

The compound produced in Step D (6 g) was dissolved in methylene chloride (50 mL). To this mixture HCl/dioxane (20 mL, 4N) was added. The mixture was stirred for 1-2 hours. The solvent was removed under reduced pressure followed by addition of ether. The

solvent was rem ved again under reduced pressure. The solid was purified by reverse phas chr matography (water/acet nitrile) t result in a white solid (0.8 g). MS and H-NMR were consistent with th proposed structure.

5

10

4

Step F

HN NH2
NH CO₂Et

The aniline from step E was dissolved into acetonitrile (20 mL). To this mixture pyrazole carboxamidine hydrochloride (2 g) was added followed by addition of DIEA. The mixture was heated at reflux for 4 hours. After complete reaction (1-16 hours) the product was purified by reverse phase chromatography (water/acetonitrile) to result in a white solid (0.9 g).

Step G

25

30

DL-ethyl 3-amino-3-(3,5-dichlorophenyl) propionate adduct produced in Step F (500 mg) was dissolved in water/acetonitrile (1:1), followed by the addition of lithium hydroxide (100 mg). The reaction was allowed to stir at 25°C, and monitored by HPLC. After complete hydrolysis (1-2 hours) trifluoroacetic acid was added until pH = 2. The product was purified by reverse phase chromatography (water/acetonitrile) to result in 125 mg of the title compound as a white solid. MS and H-NMR were consistent with the proposed structure.

MS and H-NMR were consistent with the proposed structure.

Example 280

Preparation f β -[[2-[[[3-[[(phen xyamino)-carbonyl]amino]phenyl]carbonyl]amino]acetyl]amino]-pyridine-3-propanoic acid, trifluoroacetate salt

Step A

15

10

5

20

25

To O-phenyl hydroxyl amine hydrochloride (Fluka) (4 g) in acetonitrile was added 3-ethoxycarbonyl phenylisocyanate (Lancaster) (5 g) and NMM (1 equivalent). The reaction was stirred for 1 hour at 70°C. After complete reaction the solvent was removed under reduced pressure to give a solid mass. Water was added and a tan solid filtered (7.5 g). MS and H-NMR were consistent with the proposed structure.

10

15

20

25

Step B

The compound produced in Step λ (7 g) was dissolved in water/acetonitrile (1:1), followed by the addition of lithium hydroxide (4g). The reaction was allowed to stir at 25°C, and monitored by HPLC. After complete hydrolysis (4-6 hours) 10% aqueous HCl was added until pH = 2. The product was filtered to give a white solid (7 g) which was dried in a vacuum oven at 70°C for 16 hours. MS and H-NMR were consistent with the proposed structure.

Step C

N,N'-disuccinimidyl carbonate (DSC) (1.4 g, 0.5 mmol) was added to the carboxylic acid-urea of O-phenyl hydroxyl amine produced in Step B and 3-ethoxycarbonyl

30 phenylisocyanate [(Al3)in Scheme V] (1.0 g, 0.5 mmol) in dry dimethylformamide (20 mL) followed by addition of dimethylaminopyridine (100 mg). After a period of 1 hour gly-DL-ethyl 3-amino-3-(pyridyl) propionate hydrochloride (2.2 g, 0.7 mmol) in DMF/NMM (1:1) (5.0 mL) was added in

one portion. After c mplete reaction the product was purified by reverse phase chromatography (water/acetonitrile) to result in a white solid (0.8 g). MS and H-NMR w re consistent with the pr posed structure.

5

10

15

Step D

The compound produced in Step C (300 mg) was dissolved in water/acetonitrile (1:1), followed by the addition of lithium hydroxide (100 mg). The reaction was allowed to stir at 25°C, and monitored by HPLC. After complete hydrolysis (1-2 hours) trifluoroacetic acid was added until pH = 2. The product was purified by reverse phase chromatography (water/acetonitrile) to result in 500 mg of the title compound as a white solid. MS and H-NMR were consistent with the proposed structure.

10

20

Example 281

Preparation f β -[[2-[[[3-[[(phenylamino)amin]-carbonyl]amin]phenyl]carbonyl]amino]acetyl]amin]-pyridine-3-propanoic acid, trifluoroacetate salt

15 Step A

To phenyl hydrazine hydrochloride (Aldrich) (3.5 g) in acetonitrile was added 3-ethoxycarbonyl phenylisocyante (Lancaster) (5 g) and NMM (1 equivalents). The reaction was stirred for 1 hour at 70°C. After complete reaction the solvent was removed under reduced pressure to give a solid mass. Water was added and the tan solid filtered (8.7 g). MS and H-NMR were consistent with the proposed structure.

Step B

The compound produced in Step A (5 9) was dissolved

in water/acetonitrile (1:1), followed by the addition of
sodium hydroxide (3 g). The reaction was
allowed to stir at 25°C, and monitored by HPLC. After
complete hydrolysis (4-6 hours) 10t aqueous HCl was added
until pH = 4. The product was filtered to give a yellow

solid (3.2 g) and dried in a vacuum oven at 70°C for 16
hours. MS and H-NMR were consistent with the proposed
structure.

Step C

20

25

5

N,N'-disuccinimidyl carbonate (DSC) (500 mg, 0.5
mmol) was added to the compound produced in Step B and
3-ethoxycarbonyl phenylisocyanate (1.0 g, 0.5 mmol) in dry
dimethylformamide (20 mL) followed by addition of
dimethylaminopyridine (100 mg). After a period of 1 hour
glycine-DL-ethyl 3-amino-3-(pyridyl) propionate

hydrochloride (1.0 g, 0.7 mmol) in DMF/NMM (1:1) (5.0 mL) was added in one portion. After complete reaction the product was purified by reverse phase chromatography (water/acetonitrile) to result in a white solid (0.8g). MS and H-NMR were consistent with the proposed structure.

Step D

5

10

15

The compound produced in Step C (300 mg) was dissolved in water/acetonitrile (1:1), followed by the addition of lithium hydroxide (100 mg). The reaction was allowed to stir at 25°C, and monitored by HPLC. After complete hydrolysis (1-2 hours) trifluoroacetic acid was added until pH = 2. The product was purified by reverse phase chromatography (water/acetonitrile) to result in 500 mg of the title compound as a white solid. MS and H-NMR were consistent with the proposed structure.

Example 282

Preparati n $f \beta$ -[[2-[[[3-[(5-amino-1,2,4-triazol-3-yl)-amin]phenyl]carbonyl]amino]acetyl]amino]-3,5-dichlorobenzenepropanoic acid, trifluoroacetate salt

Step A

15

5

10

30

Glycine (20 g, 266 mmol) was added to water (200 mL), followed by addition of potassium hydroxide (20 g, 357 mmol) and the mixture cooled to 0°C in an ice bath. To this mixture 3-nitrobenzoyl chloride (Aldrich) (20 g,108 mmol) was added in acetonitrile (20 mL) drop-wise over a 10 minute period. After complete reaction (3-4 hours) concentrated hydrochloric acid was added until pH=1 followed by addition of saturated aqueous NaCl (75 mL). The product was filtered, washed with water and air dried (22 g, 90% yield).

5 ·

10

15

20

25

Step B

N,N'-disuccinimidyl carbonate (DSC) (1.5 g, 0.7 mmol) was added to the compound produced in Step A (1.0 g, 0.4 mmol) in dry dimethylformamide (6 mL) followed by addition of dimethylaminopyridine (100 mg). After a period of 20 minutes DL ethyl-3-amino-3-(3,5-dichloroophenyl) propionate hydrochloride (1.1 g, 0.5 mmol) was added followed by addition of NMM (2.0 mL). After complete reaction (1-16 hours) the product was isolated by adding water/aqueous HCl (5 ml) and filtering product to result in a white solid (0.9 g). MS and H-NMR were consistent with the proposed structure.

Step C

The compound produced in Step B was subjected to the conditions described in Tetrahedron Letters, Vol. 25 1984, 839-842 for the reduction of the nitro group. The reduction was preformed on 2 g of nitro compound.

Step D

10 To the compound produced in Step C (2 g) isopropanol (20 mL) was added followed by addition of diphenoxycyanamine (1 g) (Aldrich). The reaction was stirred for 1 hour at 70°C. After complete reaction the solvent was removed under reduced pressure to give a solid 15 mass. Ether was added and the tan solid filtered (3.2 g). MS and H-NMR were consistent with the proposed structure.

Step E

20

5

25

30

To the compound produced in Step D (1 g) ethanol (10 mL) was added followed by addition of hydrazine (1.5 mL) (Aldrich). The reaction was stirred for 1 hour at 25°C. After complete reaction the solvent was removed under reduced pressure to give a solid mass. After complete reaction (1 hour) the product was purified by reverse phase chromatography (water/acetonitrile) to result in a white solid (0.7 g). MS and H-NMR were consistent with the proposed structure.

10

Step F

The comp und produced in St p E (300 mg) was dissolved in water/acet nitrile (1:1), f llowed by the addition of lithium hydr xide (100 mg). The reacti n was allowed to stir at 25°C, and monitored by HPLC. After complete hydrolysis (1-2 hours) trifluoroacetic acid was added until pH = 2. The product was purified by reverse phase chromatography (water/acetonitrile) to result in 430 mg of the title compound as a white solid. MS and H-NMR were consistent with the proposed structure.

10

20

25

Example 283

Preparati n of β-[[2-[[[3-[(1,2,3,4-tetrahydro-2,4-dioxopyrimidin-6-yl)amino]phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoic acid,
trifluoroacetate salt

NH NH CO2H

15 Step A

OHN CO2H

3-Aminobenzoic acid (4 g) was added to ethoxyethanol (4 mL), followed by 6-chloro uracil (4 g), and heated to 125°C for 3-4 hours. The product was filtered, washed with ether and air dried (4.5 g) to give a tan solid. MS and H-NMR were consistent with the proposed structure.

Step B

30

N,N'-disuccinimidyl carbonate (DSC) (2 g, 0.7 mm 1) was added to the compound produced in Step A (2.0 g, 0.4 mmol) in dry dim thylformamide (6 mL) followed by addition of dimethylamin pyridin (100 mg). After a period of 20 minutes tert-butyl glycine hydrochloride (1.1 g, 0.5 mmol) was added followed by addition of DIEA (2.0 mL). After complete reaction (2-3 hours) the product was isolated by extraction in ethyl acetate, washed with aqueous HCl, saturated K₂CO₃, brine and dried over Na₂SO₄ to result in a yellow oil (3 g). MS and H-NMR were consistent with the proposed structure.

Step C

15

10

5

The compound produced in Step B (2 g) was dissolved in methylene chloride (50 mL). To this mixture TFA (20 mL) was added. The mixture was stirred for 12 hours. The solvent was removed under reduced pressure followed by addition of ether. The solid (1.8 g) was filtered and dried in a vacuum for 1-2 hours. MS and H-NMR were consistent with the proposed structure.

Step D

5

10

15

N,N'-disuccinimidyl carbonate (DSC) (1.5 g, 0.7 mmol) was added to the compound produced in Step C of Example 283 (1.0 g, 0.4 mmol) in dry dimethylformamide (6 mL) followed by addition of dimethylaminopyridine (100 mg). After a period of 20 minutes, DL ethyl-3-amino-3-(3-pyridyl) propionate hydrochloride (1.1 g, 0.5 mmol) was added followed by addition of NMM (2.0 mL). After complete reaction (1-16 hours) the product was purified by reverse phase chromatography (water/acetonitrile) to result in a white solid (0.9 g). MS and H-NMR were consistent with the proposed structure.

20

25

30

Step E

The compound produced in Step D (300 mg) was dissolved in water/acetonitrile (1:1), followed by the addition of lithium hydroxide (100 mg). The reaction was allowed to stir at 25°C, and monitored by HPLC. After complete hydrolysis (1-2 hours) trifluoroacetic acid was added until pH = 2. The product was purified by reverse phase chromatography (water/acetonitrile) to result in 430 mg of the title compound as a white solid. MS and H-NMR were consistent with the proposed structure.

10

15

Example 284

Preparation of 3,5-dichlor $-\beta$ -[[2-[[[3-[[1,2,3,4-tetrahydro-2,4-dioxopyrimidin-6-yl)amino]phenyl]-carbonyl]amino]acetyl]amino]benzenepropanoic acid

Step A

N,N'-disuccinimidyl carbonate (DSC) (0.6 g) was added to the compound from Step C of Example 283 (0.6 9,) in dry dimethylformamide (6 mL) followed by addition of dimethylaminopyridine (100 mg). After a period of 20 minutes DL ethyl-3-amino-3-(3,5-dichlorophenyl) propionate hydrochloride (1.1 9, 0.5 mmol) was added followed by addition of NMM (2.0 mL). After complete reaction (1-16 hours) the product was purified by reverse phase chromatography (water/acetonitrile) to result in a white solid (0.9 g). MS and H-NMR were consistent with the proposed structure.

Step B

5

10

The compound produced in Step A (200 mg) was diss lved in water/ac tonitril (1:1), followed by addition of lithium hydroxide (100 mg). The reacti n was allowed to stir at 25°C, and monitored by HPLC. After complete hydrolysis (1-2 hours) trifluoroacetic acid was added until pH = 2. The product was purified by reverse phase chromatography (water/acetonitrile) to result in 105 mg of the title compound as a white solid. MS and H-NMR were consistent with the proposed structure.

10

20

25

30

Example 285

Preparati n f 3,5-dichlor -β-[[2-[[[3-[[imino(1-piperidinyl)methyl]amin]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid,
trifluoroacetate salt

Step A

NH NH CO₂Et

The above compound was prepared according to methodology of Example 24, substituting one equivalent of piperidine for benzylamine in Example 23, Step B, and an equivalent amount of DL ethyl-3-amino-3-(3,5-dichlorophenyl) propionate hydrochloride for DL ethyl-3-amino-3-(3-pyridyl) propionate dihydrochloride in Example 1, Step C and further used in Example 1, Step D as described in Example 23, Step C. MS and H-NMR were consistent with the proposed structure.

Step B

5

10

The compound prepared in Step A (200 mg) was diss lv d in water/ac t nitrile (1:1), f llowed by the additi n of lithium hydr xide (100 mg). The r action was allowed to stir at 25°C, and monitored by HPLC. After complete hydrolysis (1-2 hours) trifluoroacetic acid was added until pH = 2. The product was purified by reverse phase chromatography (water/acetonitrile) to result in 105 mg of the title compound as a white solid. MS and H-NMR were consistent with the proposed structure.

10

15

20

30

Example 286

Preparation of β -[[2-[[[3-[[benz xazol-2-yl)amino]-phenyl]carbonyl]amin]acetyl]amino]pyridine-3-propanoic acid, trifluoroacetate salt

Step A

The compound prepared in Example 104 (2.0 g) was added to absolute ethanol (60 mL) in a Parr jar. Palladium on carbon 5% (500 mg) was added and the mixture was hydrogenolyzed under 50 psi in a Parr apparatus for a period of 2.5 hours. After complete reaction the palladium catalyst was removed by filtration through a plug of celite. The solvent was removed under reduced pressure and the sample dried in vacuo.

Step B

The compound prepared in Step A was dissolved in DMF (20 mL). To this mixture 2-chlorobenzoxazole (Aldrich) (2 g) and K₂CO₃ (4 g) was added. The mixture was heated to 70°C until the aniline was consumed. After complete reaction, the product was purified by reverse phase

chromatography (water/acetonitrile) to result in 215 mg f the titl compound as a white solid. MS and H-NMR wer c nsistent with the proposed structure.

5 Step C

The compound prepared in Step B (200 mg) was dissolved in water/acetonitrile (1:1), followed by the addition of lithium hydroxide (100 mg). The reaction was allowed to stir at 25°C, and monitored by HPLC. After complete hydrolysis (1-2 hours) trifluoroacetic acid was added until pH = 2. The product was purified by reverse phase chromatography (water/acetonitrile) to result in 185 mg of the title compound as a white solid. MS and H-NMR were consistent with the proposed structure.

15

10

10

15

20

30

Example 287

Preparation of β -[[2-[[[3-[[5-phenyl-1H-imidazol-2-yl)-amino]phenyl]carb nyl]amino]acetyl]amino]pyridine-3-propanoic acid, trifluoroacetate salt

Step A

The compound prepared in Example M, Step B (5 g) was added to ethanol (100 mL) followed by dry HCl in dioxane (10 mL). The mixture was heated to reflux for 2 hours. The solvent was removed under reduced pressure to give the ethyl ester (5.6 g). MS and H-NMR were consistent with the proposed structure.

25 Step B

To the product of Step A (3 g) acetonitrile (50 mL) was added followed by addition of bromoacetophenone (2.7 g) and DIEA (2 mL). The mixture was heated for 2 hours and the solvent removed under reduced pressure. The

product was isolated by extracti n into ethyl acetate and dried ver Na_2SO_4 t give a dark r d solid (5 g). MS and H-NMR were c nsistent with the pr posed structure.

5 Step C

10

15

The compound produced in Step B (2 g) was dissolved in water/acetonitrile (1:1), followed by the addition of lithium hydroxide (100 mg). The reaction was allowed to stir at 25°C, and monitored by HPLC. After complete hydrolysis (1-2 hours) aqueous HCl was added until pH = 7. The product was filtered and dried in an oven to result in 2.6 g of a tan solid. MS and H-NMR were consistent with the proposed structure.

20 Step D

25

30

N,N'-disuccinimidyl carbonate (DSC) (0.3 g, 0.7 mmol) was added to the compound produced in Step C (0.5 g, 0.4 mmol) in dry dimethylformamide (5 mL) followed by addition of dimethylaminopyridine (100 mg). After a period of 20 minutes, DL ethyl-3-amino-3-(3-pyridyl) propionate hydrochloride (1.1 g, 0.5 mmol) was added followed by addition of NMM (2.0 mL). After complete reaction (1-16 hours) the product was purified by reverse phase chromatography (water/acetonitrile) to result in a white

solid (0.9 g). MS and H-NMR were consistent with the pr posed structure.

Step E

5

10

The compound produced in Step D (250 mg) was dissolved in water/acetonitrile (1:1), followed by the addition of lithium hydroxide (100 mg). The reaction was allowed to stir at 25°C, and monitored by HPLC. After complete hydrolysis (1-2 hours) trifluoroacetic acid was added until pH = 2. The product was purified by reverse phase chromatography (water/acetonitrile) to result in 110 mg of the title compound as a white solid. MS and H-NMR were consistent with the proposed structure.

10

15

20

Example 288

Preparation of 3-[[2-[[[3-[(amin iminomethyl)amin]-phenyl]carbonyl]amin]acetyl]amino]-5-[(3,5-dichlorophenyl)amino]-5-oxopentanoic acid, trifluoroacetate salt

Step A

A mixture of β-amino glutaric acid (Sigma) (5 9) and trifluroacetic anhydride (Sigma) (20 mL) was stirred for 1-2 hours at 25°C. The solvent was removed under reduced pressure to leave an oil. To the oil was added ether (50 mL) and the product filtered (5 g). MS and H-NMR were consistent with the proposed structure.

Step B

5

10

15

20

25

A DMF (20 mL) mixture of the product from Step A and 3,5 dichloroaniline (6 g) was stirred for 16 hours. After complete reaction aqueous HCl (100 mL) and ethyl acetate (100 mL) were added and the mixture, shaken and separated. The organic layer was washed with brine and dried over Na₂SO₄ to give the acid amide (4 g). MS and H-NMR were consistent with proposed structure.

Step C

The trifluoroacetate group of the product of Step B was removed by heating the compound produced in Step B with dilute ammonium hydroxide (10 mL in 50 mL water). After complete reaction the mixture was acidified with 10% HCl and the product (2.5 g) was filtered. MS and H-NMR were consistent with the proposed structure.

Step D

5

10

20

25

30

The compound produced in Step C (2 g) was added to ethanol (100 mL) followed by dry HCl in dioxane (10 mL). The mixture was heated to reflux for 2 hours. The solvent was removed under reduced pressure to give the ethyl ester (1.9 g). MS and H-NMR were consistent with the proposed structure.

15 Step E

N,N-disuccinimidyl carbonate (DSC) (0.6 g, 0.7 mmol) was added to the compound produced in Example M, Step A (0.6 g, 0.4 mmol) in dry dimethylformamide (5 mL) followed by addition of dimethylaminopyridine (100 mg). After a period of 20 minutes the compound produced in Step D of Example 288 (0.7 g, 0.5 mmol) was added followed by addition of NMM (2.0 mL). After complete reaction (1-16 hours) the product was purified by reverse phase chromatography (water/acetonitrile) to result in a white solid (0.51 g). MS and H-NMR were consistent with the proposed structure.

Step F

The compound produced in Step E (250 mg) was dissolved in water/acetonitril (1:1), f ll wed by the addition f lithium hydroxide (100 mg). The reaction was allowed to stir at 25°C, and monitored by HPLC. After complete hydrolysis (1-2 hours) trifluoroacetic acid was added until pH = 2. The product was purified by reverse phase chromatography (water/acetonitrile) to result in 110 mg of the title compound as a white solid. MS and H-NMR were consistent with the proposed structure.

Example 289

Pr paration of β -[[2-[[[3-[(amin imin m thyl)amin]-5-carboxyphenyl]carbonyl]amino]acetyl]amin]pyridin -3-propanoic acid, bis(trifluoroacetate) salt

Step A

N,N'-disuccinimidyl carbonate (DSC) (6.5 g) was added to methyl hydrogen 5-nitroisophthalate (5 g) in dry dimethylformamide (10 mL) followed by addition of dimethylaminopyridine (200 mg). After a period of 20 minutes tert-butyl β-glycine (2.6 g) was added followed by addition of NMM (2.0 mL). After complete reaction (4 hours) the product was isolated by extraction into ethyl acetate and dried over Na₂SO₄ to result in a white solid (5.1 g). MS and H-NMR were consistent with the proposed structure.

Step B

5

10

15

20

The compound produced in Step A (5 g) was dissolved in dioxane (50 mL). To this mixture dry HCl (20 mL, 4N) was added. The mixture was stirred for 1-2 hours. The solvent was removed under reduced pressure followed by addition of ether and removal of the solvent under reduced pressure. The solid was filtered to result in a white solid (4 g) and dried in a vacuum oven. MS and H-NMR were consistent with the proposed structure.

Step C

N,N-disuccinimidyl carbonate (DSC) (2 g) was added to the compound produced in Step B (2 g) in dry dimethylformamide (10 mL) followed by addition of dimethylaminopyridine (200 mg). After a period of 20 minutes, DL ethyl-3-amino-3-(3-pyridyl) propionate hydrochloride (1.6 g) was added followed by addition of NMM (2.0 mL). After complete reaction (4 hours) the product was isolated by extraction into ethyl acetate and dried over Na₂SO₄ to result in an oil (3 g). MS and H-NMR were consistent with the proposed structure.

10

20

25

Step D

The compound produced in Step C was subjected to the conditions discribed in Tetrahedron Letters, Vol. 25, 1984, 839-842 to reduce the nitro group. The reduction was performed on 2 g of nitro compound to give 1 g of product. MS and H-NMR were consistent with the proposed structure.

15 Step E

The compound produced in Step D was guanidated according to the method in Example M on a 1 g scale and purified by reverse phase chromatography (water/acetonitrile) to result in 110 mg of the title compound as a white solid. MS and H-NMR were consistent with the proposed structure.

30 Step F

The compound produced in Step E (100 mg) was dissolved in water/acetonitrile (1:1), followed by the addition of lithium hydroxide (100 mg). The reaction was allowed to stir at 25°C, and monitored by HPLC. After

complete hydr lysis (1-2 hours) triflu roacetic acid was added until pH = 2. The product was purified by r verse phase chromat graphy (water/acetonitril) to result in 110 mg f the titl compound as a white solid. MS and H-NMR were consistent with the proposed structure.

Example 290

Pr paration of β -[[2-[[[3-[(aminoiminomethyl)amin]-5-carboxyph nyl]carbonyl]amino]acetyl]amino]-3,5-dichlorobenzenepropanoic acid, trifluoroacetate salt

Step A

15

10

5

20

25

30

N,N-disuccinimidyl carbonate (DSC) (65 g) was added to methyl hydrogen 5-nitroisophthalate (5 g) in dry dimethylformamide (10 mL) followed by addition of dimethylaminopyridine (200 mg). After a period of 20 minutes tert-butyl β-glycine (2.6 g) was added followed by addition of NMM (2.0 mL). After complete reaction (4 hours) the product was isolated by extraction into ethyl acetate and dried over Na₂SO₄ to result in a white solid (5.1 g). MS and H-NMR were consistent with the proposed structure.

10

15

20

Step B

The compound produced in Step A (5 g) was dissolved in dioxane (50 mL). To this mixture dry HCl (20 mL, 4N) was added. The mixture was stirred for 12 hours. The solvent was removed under reduced pressure followed by addition of ether and removal of the solvent under reduced pressure. The solid was filtered to result in a white solid (4 g) and dried in a vacuum oven. MS and H-NMR were consistent with the proposed structure.

Step C

N,N'-disuccinimidyl carbonate (DSC) (2 g) was added to the compound produced in Step B (2 g) in dry dimethylformamide (10 mL) followed by addition of dimethylaminopyridine (200 mg). After a period of 20 minutes DL-ethyl 3-amino-3-(3,5-dichlorophenyl)propionate hydrochloride (1.6 g) was added followed by addition of NMM (2.0 mL). After complete reaction (4 hours) the product was isolated by extraction into ethyl acetate and dried over Na₂SO₄ to result in an oil (3 g). MS and H-NMR were consistent with the proposed structure.

Step D

The compound produced in Step C was subjected to the conditions discribed in Tetrahedron Letters, Vol. 25, 1984, 839-842 to reduce the nitro group. The reduction was performed on 2g of nitro compound to give 1 g of product.

Step E

15

10

5

20

25

The compound produced in Step D was guanidated according to the method in Example M on a 1 g scale and purified by reverse phase chromatography (water/acetonitrile) to result in 110 mg of the title compound as a white solid. MS and H-NMR were consistent with the proposed structure.

Step P

10 The compound produced in Step E (100 mg) was dissolved in water/acetonitrile (1:1), followed by the addition of lithium hydroxide (100 mg). The reaction was allowed to stir at 25°C, and monitored by HPLC. After complete hydrolysis (1-2 hours) trifluoroacetic acid was added until pH = 2. The product was purified by reverse phase chromatography (water/acetonitrile) to result in 25 mg of the title compound as a white solid. MS and H-NMR were consistent with the proposed structure.

Example 291

Pr parati n of β -[[2-[[[3,5-bis[(aminoiminomethyl)amino]-phenyl]carbonyl]amino]acetyl]amino]-3,5-dichl r benzene-propanoic acid, bis(trifluoroacetate) salt

Step A

15

10

5

20

25

30

Glycine (20 g, 266 mmol) was added to water (200 mL), followed by addition of potassium hydroxide (20 g, 357 mmol) and cooled to 0°C in an ice bath. To this mixture 3,5-dinitrobenzoyl chloride (20 g, 108 mmol) was added in acetonitrile (20 mL) drop-wise over a 10 minute period. After complete reaction (3-4 hours) concentrated hydrochloric acid was added until pH=1. The product was filtered, washed with water and air dried (20 g). MS and H-NMR were consistent with the proposed structure.

Step B

N,N'-disuccinimidyl carbonate (DSC) (1.2 g) was added to the compound produced in Step A (2 g) in dry dimethylformamide (10 mL) followed by addition of dimethylaminopyridine (200 mg). After a period of 20 minutes, DL ethyl 3-amino-3-(3,5 dichlorophenyl) propionate hydrochloride (1.2 g) was added followed by addition of NMM (2.0 mL). After complete reaction (4 hours) the product was isolated by extraction into ethyl acetate and dried over Na₂SO₄ to result in an yellow oil (2.1 g). MS and H-NMR were consistent with the proposed structure.

20 Step C

25

30

The compound produced in Step B was subjected to the conditions discribed in Tetrahedron Letters, Vol. 25, 1984, 839-842 to reduce of the nitro group. The reduction was performed on 2.5 g of nitro compound to give 2.1 g of the 3,5-dianilino derivative. MS and H-NMR were consistent with the proposed structure.

Step D

5

20

25

The compound produced in Step C was guanidated according to the method in Example M on a 2 g scale (using 4 g of the guanidating agent) and purified by reverse phase chromatography (water/acetonitrile) to result in 800 mg of a white solid. MS and H-NMR were consistent with the proposed structure.

Step E

The compound produced in Step D (500 mg) was dissolved in water/acetonitrile (1:1), followed by addition of lithium hydroxide (100 mg). The reaction was allowed to stir at 25°C, and monitored by HPLC. After complete hydrolysis (1-2 hours) trifluoroacetic acid was added until pH = 2. The product was purified by reverse phase chromatography (water/acetonitrile) to result in 450 mg of the title compound as a white solid. MS and H-NMR were consistent with the proposed structure.

Example 292

Preparation of β -[[2-[[[3-[(amin imin methyl)amino]-5-(trifluoroacetyl)amino]phenyl]carbonyl]amino]acetyl]-amino]-3,5-dichl robenzenepropanoic acid,

•

Step A

trifluoroacetate salt

A mixture of 5-amino-3-nitro benzoic acid (Lancaster) (3 g) and trifluroacetic anhydride (Sigma) (20 mL) in methylene chloride was stirred for 2 days at 25°C. The solvent was removed under reduced pressure to leave an oil. To the oil was added water (50 mL) and the product filtered (4.5 g). The product was dried in an oven at 70°C for 16 hours. MS and H-NMR were consistent with the proposed structure.

Step B

5

N,N'-disuccinimidyl carbonate (DSC) (3 g) was added to the compound produced in Step A (2.7 g) in dry dimethylformamide (4 mL) followed by addition of dimethylaminopyridine (200 mg). After a period of 20 minutes, tert-butyl glycine hydrochloride (2.7 g) was added followed by addition of NMM (2.0 mL). After complete reaction (4 hours) the product was isolated by extraction into ethyl acetate and dried over Na₂SO₄ to result in an yellow oil (3.3 g). MS and H-NMR were consistent with the proposed structure.

Step C

20

25

The compound produced in Step B (3 g) was dissolved in methylene chloride (50 mL). To this mixture TFA (20 mL) was added. The mixture was stirred for 12 hours. The solvent was removed under reduced pressure followed by addition of ether. The solid (2.7 g) was filtered and

dried in a vacuum ven for 1-2 hours. MS and H-NMR were consistent with the pr p sed structure.

Step D

5

10

15

20

25

30

O₂N CON CON CO₂Et

N,N'-disuccinimidyl carbonate (DSC) (1.5 g) was added to the product of Step C (1.2 g) in dry dimethylformamide (10 mL) followed by addition of dimethylaminopyridine (200 mg). After a period of 20 minutes DL ethyl 3-amino-3-(3,5 dichlorophenyl) propionate hydrochloride (1.7 g) was added followed by addition of NMM (2.0 mL). After complete reaction (4 hours) the product was isolated by extraction into ethyl acetate and dried over Na₂SO₄ to result in an yellow oil (2.1 g). MS and H-NMR were consistent with the proposed structure.

Step E

The compound produced in Step D was subjected to the conditions discribed in Tetrahedron Letters, Vol. 25, 1984, 839-842 to reduce the nitro group. The reduction was performed on 1.8 g of nitro compound to give 1.8 g of

th 3-anilino derivative. MS and H-NMR were consistent with th proposed structure.

Step F

5

10

15

20

25

30

The compound produced in Step E was guanidated according to the method in Example M on a 1.5 g scale (using 3 g of the guanidating agent) and purified by reverse phase chromatography (water/acetonitrile) to result in 750 mg of the above compound as a white solid. MS and H-NMR were consistent with the proposed structure.

Step G

The compound produced in Step F (500 mg) was dissolved in water/acetonitrile (1:1), followed by the addition of lithium hydroxide (100 mg). The reaction was allowed to stir at 25°C, and monitored by HPLC. After complete hydrolysis (1-2 hours) trifluoroacetic acid was added until pH = 2. The product was purified by reverse phase chromatography (water/acetonitrile) to result in 300 mg of the title compound as a white solid. MS and H-NMR were consistent with the proposed structure.

10

15

20

Example 293

Preparation of β -[[2-[[[3-(acetylamino)-5-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]-acetyl]amino]-3,5-dichlorobenzenepropanoic acid, trifluoroacetate salt

Step A

A mixture of 5-amino-3-nitro benzoic acid (Lancaster)

(5 g) and acetic anhydride (Sigma) (10 mL) in methylene chloride was stirred for 2 days at 25°C. The solvent was removed under reduced pressure to leave an oil. To the oil was added water (50 mL) and the product filtered (4.5 g). The product was dried in an oven at 70°C for 16 hours. MS and H-NMR were consistent with the proposed structure.

Step B

5

N,N'-disuccinimidyl carbonate (DSC) (3 g) was added to the compound produced in Step A (3 g) in dry dimethylformamide (6 mL) followed by addition of dimethylaminopyridine (200 mg). After a period of 20 minutes tert-butyl glycine hydrochloride (2.1 g) was added followed by addition of NMM (2.0 mL). After complete reaction (4 hours) the product was isolated by extraction into ethyl acetate and dried over Na₂SO₄ to result in an yellow oil (3.3 g). MS and H-NMR were consistent with the proposed structure.

20 Step C

25

The compound produced in Step B (3 g) was dissolved in methylene chloride (10 mL). To this mixture TFA (10 mL) was added. The mixture was stirred for 12 hours. The solvent was removed under reduced pressure followed by addition of addition of ether. The solid (3 g) was filtered and dried in a vacuum oven for 1-2 hours. MS and H-NMR were consistent with the proposed structure.

Step D

N,N'-disuccinimidyl carbonate (DSC) (1.5 g) was added to the product from Step C (1.2 g) in dry dimethylformamide (10 mL) followed by addition of dimethylaminopyridine (200 mg). After a period of 20 minutes DL ethyl 3-amino-3-(3,5 dichlorophenyl) propionate hydrochloride (1.7 g) was added followed by addition of NMM (2.0 mL). After complete reaction (4 hours) the product was isolated by extraction into ethyl acetate and dried over Na₂SO₄ to result in a tan solid (2 g). MS and H-NMR were consistent with the proposed structure.

Step E

20

5

10

15

25

30

The compound produced in Step D was subjected to the conditions described in Tetrahedron Letters, Vol. 25, 1984, 839-842 to reduce the nitro group. The reduction was performed on 1.5 g of nitro compound to give 1.5 g of the 3-anilino derivative. MS and H-NMR were consistent with the proposed structure.

Step F

10

15

20

25

5

The compound produced in Step E was guanidated according to the method in Example M on a 1.4 g scale (using 2 g of the guanidating agent) and purified by reverse phase chromatography (water/acetonitrile) to result in 750 mg of the above compound as a white solid. MS and H-NMR were consistent with the proposed structure.

Step G

The compound produced in Step F (300 mg) was dissolved in water/acetonitrile (1:1), followed by the addition of lithium hydroxide (100 mg). The reaction was allowed to stir at 25°C, and monitored by HPLC. After complete hydrolysis (1-2 hours) trifluoroacetic acid was added until pH = 2. The product was purified by reverse phase chromatography (water/acetonitrile) to result in 200 mg of the title compound as a white solid. MS and H-NMR were consistent with the proposed structure.

Examples 294-296

Step A

5

To a 2L-3-neck round bottom flask equipped with 10 mechanical stirrer was added β-amino-3,5-dichlorobenzenepropanoic acid (52.78 g, 0.2255 mol). The β -amino-3,5-dichlorobenzenepropanoic acid was dissolved in 900 mL of acetone and 300 mL of water and sodium carbonate was added (3.0 eq., 71.70 g, 0.6765 mol). The pH = 10. FMOC succinimidyl carbonate (Sigma Chemical Co., 1.0 eq., 15 76.06 g, 0.2255 mol) was dissolved in 600 mL of acetone and added slowly to the basic aqueous solution via addition funnel over 45 minutes. The reaction was stirred for 16 hours at room temperature. HPLC analysis (Waters, 20 C18, reverse phase, 25 cm column, 50-90% acetonitrile in water over 30 minutes) indicated that the β -amino-3,5dichlorobenzenepropanoic acid was consumed. The acetone was removed from the reaction mixture in vacuo. The basic aqueous phase was acidified to pH = 3 using 3.0 N 25 hydrochloric acid. In a 2L separatory funnel the acid layer was washed with 1L of ethyl acetate, the water layer was removed and the organic layer was washed (2 x 250 mL water, 2 x 250 mL saturated sodium chloride). The organic layer was dried (magnesium sulfate), filtered and concentrated in vacuo to 300 mL. Petroleum ether was 30 added (300 mL) and a white flocculent solid precipitated. After 24 hours of air drying, isolated 38.49 g as a first crop (38% yield). The mother liquor was saved for future use. NMR (DMSO): 2.62-2.72 (m, 2H), 4.15-4.32 (m, 1H), 7.21-7.40 (m, 5H), 7.45 (s, 1H), 7.60-7.70 (m, 2H), 7.85 35

(d, j=7 Hz, 2H), 7.99 (d, j=7 Hz, 1H). MS (FAB) m/e (relative intensity): 456.2 (20), 179 (100).

Step B

5

10

35

Wang resin (25.0 g, 28.0 mmol) was placed in a 1L 3neck round bottom flask fitted with an overhead stirrer and nitrogen inlet. The resin was swelled with 250 mL of methylene chloride for 15 minutes then drained. The FMOC protected amino acid produced in Step A (25.66 g, 56.0 15 mmol) was activated in a separate 500 mL round bottom flask by dissolving in methylene chloride/dimethylformamide (4:1, 125 mL) and adding diisopropylcarbodiimide (DIC, 8.77 mL, 56.0 mmol) via 20 syringe, followed by addition of dimethylaminopyridine (DMAP, 0.342 g, 2.8 mmol). The solution was stirred at 25°C for 15 minutes, then added to the preswelled Wang resin. The slurry was stirred for 2 hours at 25°C. The reaction was drained and washed with methanol (3 x 250 mL), methylene chloride (3 x 250 mL) and diethyl ether (3 25 x 250 mL). The resin was then swelled in 250 mL of methylene chloride and drained. The activated product of Step A (12.83 g, 28.0 mmol, DIC, 4.36 mL, 28.0 mmol, DMAP, 0.170 g, 1.4 mmol in 100 mL methylene 30 chloride/dimethylformamide 4:1) was added to the swelled resin. The slurry was stirred at 25°C for 1 hour. resin was drained and washed as before. Elemental

Calculated: C, 81.31; H, 6.30; N, 1.05; Cl, 5.33.

Found: C, 79.03; H, 6.37; N, 1.16; Cl, 5.74.

analysis calculated for resin bound material:

Step C.

5

The product of Step B (28.0 mmol) was preswelled in a 10 1L 3-neck round bottom flask equipped with overhead stirrer and nitrogen inlet using 250 mL of methylene chloride for 15 minutes. The solvent was drained and a 20% piperidine/dimethylformamide solution (125 mL) was added and the slurry was stirred at 25°C for 2 hours. 15 resin was drained and washed with dimethylformamide (3 x 100 mL), methanol (3 x 100 mL) methylene chloride (3 x 100 mL) and diethyl ether (3 x 100 mL). The resin was dried using house vacuum for 1 hour. An activated solution of FMOC-Glycine (20.81 g, 70.0 mmol, DIC, 10.95 mL, 70.0 mmol, DMAP, 0.85 g, 7.0 mmol. In 150 mL methylene 20 chloride/dimethylformamide, 4:1) was added to the preswelled resin via syringe and stirred at 25°C for 2 hours. The resin was drained and washed (methylene chloride, methanol and diethyl ether, each 3 x 100 mL). The resin was preswelled with 250 mL of methylene chloride 25 for 15 minutes, drained and a solution of activated FMOC-Glycine (10.45 g, 35.0 mmol, DIC, 5.42 mL, 35.0 mmol, DMAP, 0.42 g, 3.5 mmol in 100 mL methylene chloride/dimethyl formamide 4:1) was added to the swelled 30 resin via syringe. The slurry was stirred at 25°C for 1 hour. The resin was drained and washed (methylene chloride, methanol, diethyl ether, 3 x 100 mL each). The resin was vacuum dried for 1 hour. The Kaiser test (Kaiser, E., Color Test for Detection of Free Terminal

Amino Gr ups in th Solid-Phase Synthesis f Peptides. Anal. Biochem. 1970, 34, 595-598) indicated coupling was complete.

5 Step D

In a 500 mL bottom flask equipped with magnetic stirrer, 3-amino-benzoic acid (Aldrich, 10.0 g, 50.8 mmol) was dissolved in 50 mL of dioxane and 133 mL of 10% sodium carbonate. The stirred solution was cooled to 0°C (ice/water) and a solution of fluorenylmethyl 10 chloroformate (13.78 g, 53.3 mmol, in 50 mL dioxane) was added dropwise over 15 minutes. The reaction was warmed to 25°C overnight. HPLC analysis (as described earlier) indicated that the starting material was consumed. 500 mL 15 of water was added to the reaction mixture and a white precipitate formed immediately. The solid was collected, washed with 10% citric acid and dried under vacuum. Isolated 15.23 g, (83.4% yield) of a white flocculent solid. NMR (DMSO): 4.18-4.25 (m, 3H), 7.25-7.41 (m, 6H), 20 7.62-7.72 (m, 3H), 7.89-7.90 (m, 3H). MS(FAB): product ion M+H observed at m/z 360.

Step E

10 20.0 g of the product of Step C (22.4 mmol) was preswelled in 500 mL of methylene chloride for 30 minutes. The solvent was drained and 250 mL of 20% piperidine/dimethyl formamide was added and allowed to stir at 25°C for 40 minutes. The resin was drained and washed with dimethyl formamide, methanol, methylene 15 chloride, and diethyl ether (each solvent, 3 x 150 mL). The Kaiser test indicated the deprotection was complete. The resin was dried using house vacuum for 45 minutes. The resin was then preswelled using 250 mL of methylene 20 chloride, drained and the activated product of Step D (13.54 g, 35.5 mmol, DIC, 5.55 mL, 35.5 mmol, DMAP, 0.88 g, 7.2 mmol, in 100 mL methylene chloride/dimethyl formamide 4:1) was added to the preswelled resin. The reaction was stirred for 16 hours at 25°C. The resin was 25 drained and washed as previously described. The Kaiser test indicated that the reaction was not complete. coupling reaction was repeated, the resin was drained and washed. A repeat Kaiser test indicated that the coupling reaction was complete. A small portion of the resin was 30 FMOC deprotected (30 minutes with 20% piperidine/dimethyl formamide) then cleaved off resin (1 hour with 95% trifluoroacetic acid/water) for NMR analysis. NMR (DMSO): 2.68-2.78 (m, 2H), 3.88 (d, j=7 Hz, 2H), 5.06-5.20 (m, 1H), 7.32-7.69 (m, 4H), 7.54 (t, j=8 Hz, 1H), 7.76

(s, 1H), 7.83 (d, j=8 Hz, 1H), 8.57 (d, j=9 Hz, 1H), 8.87 (t, j=9 Hz, 1H).

Step F

5

10

The resin of Step E (2.0 g, 2.0 mmol) in a 100 mL round bottom flask, was preswelled with 20 mL of dimethyl 15 formamide, drained, then treated with 20 mL of 20% piperidine/dimethyl formamide for 40 minutes at 25°C. The resin was filtered and washed with dimethyl formamide, methanol, methylene chloride and diethyl ether (3 x 10 mL, The Kaiser test was inconclusive, and the deprotection step and washings were repeated. The repeat 20 Kaiser test was still inconclusive, and the material used as is. The 2.0 g of resin was split into two 1.0 g portions and placed into 2 dram glass vials. Dimethyl formamide (4.0 mL/vial) was added, followed by methyl 25 isothiocyanate (1.4622 g, 20 mmol). The vials were tightly capped and heated to 80°C for 4 hours. The resin was filtered and washed with dimethyl formamide, methanol, methylene chloride, and diethyl ether (3 x 10 mL, each). The resin was dried in vacuo.

30

Step G

fritted, 100 mL reaction vessel. The resin was swelled with methylene chloride (3 x 10 mL) and drained. In a separate vial 2-chloro-1-methylpyridiniumiodide (Aldrich, 0.405 g, 1.58 mmol) was dissolved in 5 mL of dimethylformamide/methylene chloride 4:1 and added to the preswelled resin, followed by triethylamine (0.441 mL, 3.17 mmol). The reaction slurry was stirred for 8 hours at 25°C. The resin was drained, and washed with dimethylformamide and methylene chloride (3 x 10 mL each). The resin was dried in vacuo.

20

25

5

Step H

The resin product from Step G (0.666 g, 0.7 mmol) was transferred to a 15 mL fritted vessel and suspended in 3.5 mL of dimethylformamide/methylene chloride (1:1).

Methylamine (2.0 M in tetrahydrofuran, 4.4 mL, 8.8 mmol) was added to the resin slurry and allowed to stir at 25°C for 16 hours. The resin was drained, and washed with

dimethylformamide, methan 1, methylene chloride and di thyl ther $(3 \times 10 \text{ mL each})$. The resin was dried in vacuo for 1 hour.

5 Step I

The resin product from Step G (0.666 g, 0.7 mmol) was transferred to a 15 mL fritted vessel and suspended in 3.5 mL dimethylformamide/methylene chloride (1:1). Ethylamine (2.0 M in tetrahydrofuran, 4.4 mL, 8.8 mmol) was added to the resin slurry and allowed to stir at 25°C for 16 hours. The resin was drained, and washed with dimethylformamide, methylene chloride and diethyl ether (3 x 10 mL each). The resin was dried in vacuo for 1 hour.

Step J

30

10

The resin product from Step G (0.666 g, 0.7 mmol) was transferred t a 15 mL fritted vessel and suspend d in 3.5 mL dimethylformamide/methylene chl ride (1:1).

Isopropylamin (0.749 mL, 8.8 mmol) was added to the resin slurry and allowed to stir at 25°C for 16 hours. The resin was drained, and washed with dimethylformamide, methanol, methylene chloride and diethyl ether (3 x 10 mL each). The resin was dried in vacuo for 1 hour.

15

Example 294

Preparati n f (±) 3,5-dichlor -β-[[2-[[[3-[[(methylamino)(m thylimino)m thyl]amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid, trifluoroacetate salt

The resin product from Step H was treated with 2.5 mL of 95% trifluoroacetic acid/water for 1 hour at 25°C. The filtrate was collected. The resin was washed with 2 \times 1 mL of 50% trifluoroacetic acid/methylene chloride and the 20 filtrate collected. The resin was washed once more with 1 mL of methylene chloride. All filtrates were combined into a tared 2 dram vial and concentrated under nitrogen flow. Toluene (1 mL) was added to aid in removing excess trifluoroacetic acid, and the sample was concentrated 25 again under nitrogen. Lastly methylene chloride (1 mL) was added and the sample was reconcentrated to give 198.3 mg of a golden oil. HPLC (as described earlier, 220 nM) shows a 91% pure major peak. NMR (DMSO): 2.72 (d, j=7Hz, 2H), 2.79 (s, 6H), 3.87 (d, j=7 Hz, 2H), 5.11-30 5.20 (m, 1H), 7.30-7.58 (m, 5H), 7.70-7.80 (m, 4H), 8.55 (d, j=8 Hz, 1H), 8.76 (t, j=3Hz, 1H), 9.39 (s, 1H). MS(ES): product ion observed at m/z 480.

10

15

Example 295

Preparation f (±) 3,5-dichl r -β-[[2-[[[3-[[(ethylamin)(methylimino)methyl]amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid, trifluoroacetate salt

The resin product from Step I was treated with 2.5 mL of 95% trifluoroacetic acid/water for 1 hour at 25°C. The filtrate was collected. The resin was washed with 2 \times 1 mL of 50% trifluoroacetic acid/methylene chloride and the 20 filtrate collected. The resin was washed once more with 1 mL of methylene chloride. All filtrates were combined into a tared 2 dram vial and concentrated under nitrogen flow. Toluene (1 mL) was added to aid in removing excess 25 trifluoroacetic acid, and the sample was concentrated again under nitrogen. Lastly methylene chloride (1 mL) was added and the sample was reconcentrated to give 261.2 mg of a golden oil. HPLC (as described earlier, 220 nM) shows a 94% pure major peak. NMR (DMSO): 1.11 30 (t, j=7Hz, 3H), 2.72 (d, J=7 hZ, 2H), 2.79 (s, 3H), 3.25-3.60 (m, 2H), 3.87 (d, j=7 Hz, 2H), 5.02-5.20 (m, 1H), 7.30-7.58 $(m_{j} 5H)$, 7.70-7.85 (m, 4H), 8.55 (d, j=8 Hz)1H), 8.76 (t, j=3Hz, 1H), 9.40 (s, 1H). MS(ES): product ion observed at m/z 494.

15

Example 296

Preparati n f (±) 3,5-dichloro-β-[[2-[[[3-[[[(1-methylethyl)amin](methylimino)methyl]amin]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid,
trifluoroacetate salt

The resin product from Step J was treated with 2.5 mL of 95% trifluoroacetic acid/water for 1 hour at 25°C. The filtrate was collected. The resin was washed with 2 x 20 1 mL of 50% trifluoroacetic acid/methylene chloride and the filtrate collected. The resin was washed once more with 1 mL of methylene chloride. All filtrates were combined into a tared 2 dram vial and concentrated under nitrogen flow. Toluene (1 mL) was added to aid in 25 removing excess trifluoroacetic acid, and the sample was concentrated again under nitrogen. Lastly methylene chloride (1 mL) was added and the sample was reconcentrated to give 330.3 mg of a golden oil. HPLC (as described earlier, 220 nM) shows an 89% pure major peak. 30 NMR (DMSO): 1.15 (d, j=7Hz, 6H), 2.72 (d, j=7Hz, 2H), 2.79 (d, j=7 Hz, 3H), 3.79-3.92 (m, 3H), 5.05-5.20 (m, 1H),7.30-7.50 (m, 5H), 7.60-7.78 (m, 4H), 8.55 (d, j=8 Hz. 1H), 8.76 (t, j=3Hz, 1H), 9.40 (s, 1H). MS(ES): product ion observed at m/z 508.

Examples 297-299

Step A

10 To a 50 mL round bottom flask equipped with magnetic stirrer was added 3-amino-3-(4-fluoro-phenyl)-propionic acid, (0.300 g, 1.64 mmol). The propionic acid was dissolved in 1 mL of acetone and 6 mL of water and sodium carbonate was added (0.53 g, 4.92 mmol). The pH=10. FMOC succinimidyl carbonate (Sigma Chemical Co., 0.553 g, 15 1.64 mmol) was dissolved in 6 mL of acetone and added slowly to the basic aqueous solution via addition funnel over 20 minutes. The reaction was stirred for 16 hours at room temperature. HPLC analysis (Waters, C18, reverse 20 phase, 25 cm column, 50-90% acetonitrile in water over 30 minutes) indicated that the starting material was consumed. The acetone was removed from the reaction mixture in vacuo. The basic aqueous phase was acidified to pH=3 using 3.0 N hydrochloric acid. In a 50 mL 25 separatory funnel the acid layer was washed with 15 mL of ethyl acetate, the water layer was removed and the organic layer was washed (2 x 30 mL water, 2 x 30 mL saturated sodium chloride). The organic layer was dried (magnesium sulfate), filtered and concentrated in vacuo. Petroleum 30 ether was added (10 mL) and a white flocculent solid precipitated. After 24 hours of air drying, isolated 0.582 g as a first crop (87.5% yield). The mother liquor was saved for future use. NMR (DMSO): 2.55-2.75 (m, 2H), 4.10-4.30 (m, 3H), 4.85-4.95 (m, 1H), 7.12 (t, j=8 H2,

2H), 7.24-7.42 (m, 5H), 7.64 (d, j=8 Hz, 2H), 7.82-7.94 (m, 3H). MS (FAB): pr duct ion M+Li observed at m/z 412.

Step B

5

10

Wang resin (0.60 g, 0.36 mmol) was placed in a 100 mL round bottom flask. The resin was swelled with 8 mL of methylene chloride for 15 minutes then drained. The FMOC protected amino acid of Step A (0.365 g, 0.9 mmol) was 15 activated in a separate 25 mL round bottom flask by dissolving in methylene chloride/dimethylformamide (4:1, 19 mL) and adding diisopropylcarbodiimide (DIC, 0.141 mL, 0.90 mmol) via syringe, followed by the addition of dimethylaminopyridine (DMAP, 22 mg, 0.18 mmol). The 20 solution was stirred at 25°C for 15 minutes, then added to the preswelled Wang resin. The slurry was stirred for 2 hours at 25°C. The reaction was drained and washed with methanol (3 x 10 mL), methylene chloride (3 x 10 mL) and diethyl ether (3 x 10 mL). To ensure complete reaction, 25 the coupling sequence was repeated. After drying in vacuo the resin was swelled with 8 mL of methylene chloride, drained and 8 mL of 20% piperidine/dimethylformamide was added and the slurry was stirred for 30 minutes. 30 resin was drained and washed as described previously. resin was dried in vacuo for 1 hour. Elemental analysis calculated for resin bound material:

Calculated: C, 88.23; H, 7.36; N, 0.76; F, 1.03. Found: C, 87.13; H, 7.31; N, 0.79; F, 1.06.

Step C

5

10

15

20

25

The resin product from Step B was swelled with 8 mL of methylene chloride, then drained. An activated solution of FMOC-Glycine (0.267 g, 0.90 mmol, DIC, 0.140 mL, 0.90 mmol, DMAP, 22 mg, 0.18 mmol. In 10 mL methylene chloride/dimethylformamide, 4:1) was added to the preswelled resin via syringe and stirred at 25°C for 2 hours. The resin was drained and washed (methylene chloride, methanol and diethyl ether, each 3 x 10 mL). The resin was preswelled with 20 mL of methylene chloride for 15 minutes, drained and the coupling reaction was repeated to ensure complete reaction. The Kaiser test (Kaiser, E., Color Test for Detection of Free Terminal Amino Groupos in the Solid-Phase Synthesis of Peptides. Anal. Biochem. 1970, 34, 595-598) indicated the coupling was complete. The resin was then suspended in 8 mL of 20% piperidine/dimethylformamide for 30 minutes, drained and washed with dimethylformamide, methanol, methylene chloride, and diethyl ether (3 x 10 ml, each). The resin was dried in vacuo for 1 hour.

30

Step D

. 5

10

15

In a 500 mL round bottom flask equipped with magnetic stirrer, 3-amino-benzoic acid (Aldrich, 10.0 g, 50.8 mmol) was dissolved in 50 mL of dioxane and 133 mL of 10% sodium carbonate. The stirred solution was cooled to 0°C (ice/water) and a solution of fluorenylmethyl chloroformate (13.78 g, 53.3 mmol, in 50 mL dioxane) was added dropwise over 15 minutes. The reaction warmed to 25°C overnight. HPLC analysis (as described earlier) indicated that the starting material was consumed. 500 mL of water was added to the reaction mixture and a white precipitate formed immediately. The solid was collected, washed with 10% citric acid and dried under vacuum. Isolated 15.23 g, (83.4% yield) of a white flocculent solid. NMR (DMSO): 4.18-4.25 (m, 3H), 7.25-7.41 (m, 6H), 7.62-7.72 (m, 3H), 7.80-7.90 (m, 3H). MS (FAB): product ion M+H observed at m/z 360.

Step E

25

20

30

The resin product from Step C was then preswelled using 10 mL of methylene chloride, drained and the activated product of Step D (0.343 g, 0.90 mmol, DIC,

0.141 mL, 0.90 mmol, DMAP, 22 mg, 0.18 mm l, in 5 mL methylene chloride/dimethylformamide 4:1) was added to the preswelled resin. The reaction was stirred f r 16 h urs at 25°C. The resin was drained and washed as pr viously described. The Kaiser test indicated that the reaction was not complete. The coupling reaction was repeated, the resin was drained and washed. A repeat Kaiser test indicated that the coupling reaction was complete. The resin was dried in vacuo for 1 hour.

10

5

Step F

20

25

30

15

The resin product from Step E was placed in a 100 mL round bottom flask, was preswelled with 10 mL of dimethylformamide, drained, then treated with 20 mL of 20% piperidine/dimethylformamide for 10 minutes at 25°C. The resin was drained and the procedure was repeated. The resin was filtered and washed with dimethylformamide, methanol, methylene chloride and diethyl ether (3 x 10 mL, each). The Kaiser test indicated that the deprotection step was complete. The resin was placed into a glass 2 dram vial with dimethylformamide (8.0 mL), followed by methyl isothiocyanate (0.526 g, 7.2 mmol). The vial was tightly capped and heated to 80°C for 4 hours. The resin was filtered and washed with dimethylformamide, methanol, methylene chloride, and diethyl ether (3 x 10 mL, each).

The resin was dried in vacuo. Elemental analysis calculated f r r sin bound material:

Calc'd: C, 83.56; H, 6.46; N, 2.19; F, 1.03; S, 1.35.

Found: C, 82.32; H, 6.67; N, 2.53; F, 1.02; S, 1.44.

5

Step G

The resin product from Step F (100 mg, 0.06 mmol) was transferred to a 2 dram glass vial. The resin was swelled with methylene chloride (3 x 1 mL) and drained. separate vial 2-chloro-1-methylpyridiniumiodide (Aldrich, 10 18.4 mg, 0.072 mmol) was dissolved in 3 mL of dimethylformamide/methylene chloride 4:1 and added to the preswelled resin, followed by triethylamine (20.1 uL. 0.144 mmol). The reaction slurry was stirred for 16 hours at 25°C. The resin was drained, and washed with 15 dimethylformamide, methanol, methylene chloride, and diethyl ether (3 x 4 mL, each). The resin was dried in vacuo for 3 hours. The resin was treated with 95% trifluoroacetic acid (1.5 mL) for 1 hour. The resin was filtered and washed with 50% trifluoroacetic 20 acid/methylene chloride (2 x 1.0 ml) followed by methylene chloride (1 x 1.0 mL). The filtrates were combined and dried in vacuo in tared 2 dram glass vials.

Example 297

Isolated 28.1 mg of a golden oil. NMR (DMSO): 1.13
(t, j=7 Hz, 3H), 2.65-2.75 (m, 2H), 2.76-2.85 (m, 3H),
3.25 (t, j=3Hz, 2H), 3.80-3.95 (m, 2H), 5.10-5.21 (m, 1H),
7.13 (t, j=8 Hz, 2H), 7.30-7.40 (m, 3H), 7.52 (t, j=8 Hz,
1H), 7.65-7.85 (m, 3H), 8.49 (d, j=8 Hz, 1H), 8.71 (t, j=8 Hz, 1H) 9.40 (s, 1H). HPLC (as described earlier, 220 nM)
90.15% pure. MS (ES): product ion observed at m/z 444.

- 576 -

Example 298

Preparation of (±) 4-fluoro-β-[[2-[[[3-[[[(1-methylethyl)amino](m thylimino)methyl]amin]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid,
trifluoroacetate salt

Isolated 44.9 mg of a golden oil. NMR (DMSO): 1.16 (d, j=7 Hz, 6H), 2.61-2.70 (m, 2H), 2.73-2.80 (m, 3H), 3.75-3.90 (m, 3H), 5.10-5.21 (m, 1H), 7.11 (t, j=8 Hz, 2H), 7.25-7.37 (m, 3H), 7.49 (t, j=8 Hz, 1H), 7.59-7.82 (m, 3H), 8.49 (d, j=8 Hz, 1H), 8.70 (t, j=3 Hz, 1H) 9.40 (s, 1H). HPLC (as described earlier, 220 nM) 98% pure. MS (ES): product ion observed at m/z 458.

Example 361

Preparation f (±) ethyl 3,5-dichl ro-β-[[2-[[[3-[(1,4,5,6-tetrahydr -5,5-dimethylpyrimidin-2-yl)-amino]phenyl]carbonyl]amino]acetyl]amino]-benzenepropanoate, trifluoroacetate salt

Step A

5

10

To a suspension of the 1-(3-carboxyphenyl)-2-thiourea (produced in Example 236, Step A) (10.00 g, 0.051 mol) in 15 ethanol (100 mL) was added iodomethane (3.5 mL) and heated at 70°C under nitrogen atmosphere for 2.5 hours. reaction mixture was concentrated under reduced pressure, the residue was triturated with ether containing 10% EtOAc 20 (2 x 100 mL) and the supernatent decanted. The resulting solid was dried in vacuo for 2 hours, dissolved in DMF (75 mL) and added dropwise to a solution of 2,2 dimethyl-1,3 propanediamine (42 g, 0.41 mol) in DMF (20 mL) over a period of 1 hour. The resulting mixture was heated at 25 80°C under nitrogen atmosphere for 16 hours with simultaneous trapping of the methylmercaptan in 5% sodium hypochlorite solution. DMF was distilled in vacuo, the residue was dissolved in water (50 mL) and washed with diethyl ether (3 \times 25 mL). The aqueous phase was 30 acidified with 2N HCl to pH 4.0 when a white precipitate was obtained. It was filtered, washed with water and ether and dried to give the desired product 8.0 g (63%) as a white powder. H-NMR and MS were consistent with the structure.

Step B

To a suspension of the HCl salt of Step A (1.0 g, 0.0035 mol) in DMF (15 ml), was added N-methylmorpholine 10 (0.46 mL) and cooled to -10°C in an ice-salt bath. reaction mixture was then treated with isobutyl chloroformate (0.45 mL), stirred at -10°C for 30 minutes, and a solution of the amine generated by the addition of N-methylmorpholine (0.46 mL) to a solution of tbutylglycinate hydrochloride (0.6 g) in DMF (5 mL) at 0°C. 15 The resulting reaction mixture was stirred at -10°C for 1 hour and at room temperature for 16 hours under argon atmosphere. DMF was distilled in vacuo, the residue was treated with 5% sodium bicarbonate (25 mL) and EtOAc (25 mL) and stirred at room temperature for 30 minutes. A 20 white precipitate was obtained. The precipitate was filtered, washed with water (2 x 20 mL), and EtOAc (2 x 20 mL), and dried to give the desired compound, 0.58 g (46%). ¹H-NMR and MS were consistent with the structure.

25

Step C

30

The product f Step B (0.6 g, 0.0017 mol) was suspended in dioxane (2.0 mL) and treated with 4N HCl in dioxane (0.9 mL) and stirr d overnight at room temperature. The reaction mixture was diluted with diethyl ether, filtered, and the residue washed with diethyl ether (3 x 20 mL). The resulting pale yellow solid was dried in a desiccator over NaOH pallets and used as such in the following step, without purification.

5

15

30

To a suspension of HCl salt as prepared in Step C in DMF (10 mL), was added N-methylmorpholine (0.21 mL) and cooled to -10°C in an ice-salt bath. This reaction mixture was 20 then treated with isobutylchloroformate (0.24 mL), stirred at -10°C for 30 minutes, and a solution of the amine generated by the addition of N-methylmorpholine (0.46 mL) to a solution of ethyl DL-3-amino-3-(3,5-dichlorophenyl)propionate (produced as in Example 1, Steps A and B 25 substituting 3,5-dichlorobenzaldehyde for 3-pyridine carboxaldehyde) (0.6 g, 0.002 mol) in DMF (5 mL) at 0°C. The resulting reaction mixture was stirred at -10°C for 1 hour and at room temperature for 16 hours under argon atmosphere. DMF was distilled in vacuo, the residue was triturated with ether (2 x 25 mL) and the supernatent decanted. The insoluble residue was purified by reverse phase HPLC using a 30 minute gradient of 5-70% CH,CN in water at a flow rate of 70 mL/minute. The appropriate

fractions were combined and fr eze dried t aff rd the desired TFA salt, as a pale yell w powder. H-NMR and MS were c nsistent with the structure.

20

- 588 -

Example 362

Preparation f (±) 3,5-dichl r -2-hydroxy-β-[[2-[[[3-[(1,4,5,6-tetrahydro-5,5-dimethylpyrimidin-2-yl)amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid, trifluoroacetate salt

The above compound was prepared by coupling the product of Step C in Example 361 with the product of Example 440, Step A, as described in Example 361. The desired product was isolated by reverse-phase HPLC using a 30 minute gradient of 5-70% CH₃CN in water at a flow rate of 70 mL/minute. The appropriate fractions were combined and freeze dried to afford the desired TFA salt. H-NMR and MS were consistent with the structure.

10

Example 363

Preparation of β -[[2-[[[3-[(aminoiminomethyl)amino]-phenyl]carbonyl]amin]acetyl]amin]-4-fluorobenzenepropanoic acid, trifluoroacetate salt

H₂N H CO₂H

Step A

15 A mixture of 4-fluorophenyl bromide (10.0 g, 0.057 mol), tert-butylacrylate (9.52 g, 0.074 mol), palladium acetate (0.13 g, 0.00057 mol), tri-para-tolyphosphine (0.87 g, 0.0029 mol) and triethylamine (5.78 g, 0.057 mol) in 30 mL of DMF was heated at 120°C for 16 hours. The mixture was cooled and treated with 500 mL of water. The 20 aqueous phase was extracted with ethyl acetate (3 x 200 mL) and the organic layer was washed with brine, dried over magnesium sulfate and filtered. The filtrate was concentrated and the residue was purified by 25 chromatography on silica gel (ethyl acetate/hexane, 1:9) to give 10.13 g of product as a yellow oil (80%). The NMR was consistent with the proposed structure. Analysis Calc'd. for C13H15FO2: C, 70.25; H, 6.80.

Found: C, 69.77; H, 7.08.

30

10

Step B

The product from Step A (8.7 g, 0.039 mol) was treated with tert-butanol saturated with ammonia and 3 mL of acetic acid at 110°C and 900 psi in a Parr shaker for 48 hours. The mixture was filtered and concentrated. The residue was dissolved with 200 mL of cold 1N HCl and extracted with ethyl acetate. The aqueous phase was then basified with potassium carbonate and extracted with methylene chloride (2 x 200 mL). The combined extracts were washed with brine, dried over magnesium sulfate and filtered. The filtrate was concentrated to give 4.23 g of a yellow oil (41%). The structural assignment was supported by the NMR spectrum.

15 Step C

To a solution of the compound of Example M (1.0 g, 0.0037 mol) in 10 mL of DMF was added N-methylpiperidine (0.42 g, 0.0037 mol) rapidly. The mixture was stirred at room temperature for 20 minutes, then treated with isobutyl chloroformate at 0°C. After 15 minutes, a solution of the product from Step B in 3 mL of DMF was added. The reaction mixture was allowed to warm to room temperature and stirred overnight. Dimethylformamide was removed in vacuo and the residue was purified by reverse phase HPLC [acetonitrile/water (containing 0.5% of TFA)] to give 0.97 g of a pale yellow solid (44%):
Analysis Calc'd. for C2H2N3O4F·1.0 H2O·1.0 TFA:

C, 50.93; H, 5.30; N, 11.88. C, 50.61; H, 4.92; N, 11.74.

Found:

Step D

30

To a suspension of the product from Step C in 10 mL of methylene chloride at 0°C was added 6 mL of TFA. The mixture was stirred at room temperature for 4 hours.

Solv nt was removed and the residue was purified by r v rse phase HPLC [acet nitril /water (c ntaining 0.5% of TFA)] t give 0.75 g f the title compound as a whit s lid (75%):

5 Analysis Calc'd. for C₁₉H₂₀N₅O₄F·1.5 TFA:

Example 364

Preparation of (±) β-[[2-[[[3-[(amin iminom thyl)-amin]ph nyl]carbonyl]amino]acetyl]amino]
1H-imidazole-2-propanoic acid,

tris(trifluoroacetate) salt

Step A

A solution of 2-imidazolecarboxaldehyde (6.0 g, 0.063 mol) and (tert-butylcarbonylmethylene)triphenylphosphorane (29.4 g, 0.078 mol) in 150 mL of tetrahydrofuran was heated at 55°C overnight. The clear solution was cooled and concentrated in vacuo. The residue was purified by chromatography on silica gel (ethyl acetate/hexane, 8:2) to give 9.7 g of product (1:1 E/Z mixture) as a white solid (79%): Analysis Calc'd. for C₁₀H₁₄N₂O₂:

Found:

C, 61.84; H, 7.27; N, 14.42. C, 61.52; H, 7.39; N, 14.21.

25 Step B

To a suspension of prewashed sodium hydride (0.62 g, 0.026 mol) in 40 mL of dry dimethylformamide was added the product from Step A slowly. After 30 minutes, 2- (trimethylsilyl)ethoxymethyl chloride was added and the reaction mixture was stirred at room temperature for 2 hours. Water was added and the aqueous phase was extracted with ethyl acetate. The organic layer was washed with brine, dried over magnesium sulfate and filtered. The filtrate was concentrated and the residue

WO 97/08145 PCT/US96/13500

- 593 -

purifi d by chromatography on silica gel (ethyl acetate/hexane, 1:1) t give 3.54 g f E isomer as a colorl ss oil and 2.66 g f Z is mer as a white s lid (73%). Analysis Calc'd. f r $C_{16}H_{28}N_2O_3Si$:

C, 59.22; H, 8.70; N, 8.63.

Found: C, 58.94; H, 9.12; N, 8.53.

Step C

5

To a solution of N-benzyl(trimethylsilyl)amine 10 (2.16 g, 0.012 mol) in 30 mL of dry tetrahydrofuran at -78°C was added n-butyllithium (0.012 mol) slowly. After 30 minutes, a solution of the product of Step B (2.6 g, 0.008 mol) in 15 mL of tetrahydrofuran was added and the reaction mixture was stirred at this temperature for 2.5 hours. The reaction was then quenched with a solution of 15 acetic acid in tetrahydrofuran, followed by addition of saturated sodium bicarbonate to pH 9. The aqueous phase was extracted with ethyl acetate and the organic layer was washed with brine, dried over magnesium sulfate and 20 filtered. The filtrate was concentrated and purified by chromatography on silica gel (ethyl acetate/hexane, 6:4) to give 1.96 g of product as a clear oil (60%). Analysis Calc'd. for C23H37N3O3Si:

C, 64.00; H, 8.64; N, 9.73.

Found: C, 63.72; H, 8.85; N, 9.73.

Step D

25

30

To a solution of the product from Step C (5.4 g, 0.0125 mol) and ammonium formamide (7.89 g, 0.125 mol) in 150 mL of methanol was added Pd/C (170 mg). The mixture was stirred at reflux for 3 hours. The catalyst was filtered through celite and the filtrate was concentrated. The residue was dissolved in 400 mL of water, saturated with potassium carbonate, extracted with ethyl acetate.

The rganic layer was washed with brine, dried over magnesium sulfat and filtered. The filtrat was concentrated to give 3.9 g of product as a colorless il (91%). The NMR spectrum indicated that the compound was of sufficient purity for the next step.

Step E

5

H₂N H H Me Me Me Me Me Me Me

The above compound was synthesized under the same conditions as described in Step C of Example 363. The crude product was purified by reverse phase HPLC [acetonitrile/water (containing 0.5% of TFA)] to give 1.5 g of product as a yellow solid (60%):

Example 367

Preparation of (±) 3,5-dichl r -β-[[2-[[[3-[(1,4,5,6-tetrahydro-5,5-dimethylpyrimidin-2-yl)amino]phenyl]carbonyl]amino]acetyl]-amino]benzenepropanoic acid, trifluoroacetate salt

The ethyl ester prepared in Example 361, Step D (0.22 g) was hydrolyzed to the acid using 1M LiOH, (1.8 mL) in acetonitrile (0.2 mL), followed by acidification and purification by reverse-phase HPLC to give 0.18 g of the acid as pale yellow powder. HNMR and MS were consistent with the structure.

- 598 -

Example 368

Preparati n of (±) 3-bromo-5-dichloro-2-hydr xyβ-[[2-[[[3-[(1,4,5,6-tetrahydro-5,5dimethylpyrimidin-2-yl)amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid, trifluoroacetate salt

The above compound was prepared by coupling the acid prepared in Example 361, Step C, (0.6 g) with the product of Example 233, Step B (0.5 g) according to the procedure described in Example 361. The desired product was isolated by reverse-phase HPLC to give 0.38 g of the above compound as a pale yellow powder. 'H NMR and MS were consistent with the structure.

10

Example 370

Synthesis of β -[[2-[[[3-[(aminoiminomethyl)-amin]ph nyl]carbonyl]amino]acetyl]amin]-2-mercaptobenzenepropanoic acid, lithium salt

Step A

Synthesis of S-Phenyl Thiocinnamate: A solution of cinnamoyl chloride (14.6 g, 87.68 mmol) in dichloromethane (100 mL) was added to a solution of thiophenol (9.55 g, 86.68 mmol) and pyridine (7 mL) in dichloromethane (150 mL) in an ice-water bath. After 18 hours at room temperature, the reaction mixture was washed with dilute hydrochloric acid (100 mL, 1N), brine (100 mL), dried (MgSO₄) and was concentrated to afford 19.0 g (91%) of the desired thioester as a crystalline solid.

25 <u>Step B</u>

30

Synthesis of Thiocoumarin: A mixture of S-phenyl thiocinnamate (14.0 g, 58.25 mmol) and aluminum chloride (39 g) was stirred and heated at 85°C for 3 hours. The hot reaction mixture was poured carefully over ice, then was extracted with ethyl acetate (3 x 300 mL), washed with brine (200 mL), dried (MgSO₄) and was concentrated. The residue was recrystallized from hexane-ethyl acetate to afford 5.2 g (52%) of the desired product as pale yellow crystals.

Step C

Synthesis of 4-Amin -3,4-Dihydr thi c umarin Hydrochloride Salt: Lithium hexamethyldisilazane (10.22 mL, 1N, 10.22 mm 1) was added s1 wly t a solution of thiocoumarin (1.41 g, 8.52 mmol) in tetrahydrofuran (20 5 mL) at -78°C. After 45 minutes, the reaction mixture was warmed up to 0°C, then was quenched with glacial acetic acid (0.511 g). After 10 minutes, the reaction mixture was partitioned between ethyl acetate (100 mL) and sodium bicarbonate (100 mL). The organic layer was dried (MgSO₄) 10 and was concentrated. The residue obtained was dissolved in ether (100 mL) and dioxane/HCl (20 mL, 4N) was added. The precipitate formed was filtered and the solid was dried in vacuo to afford (0.50 g, 27%) of the desired product as a yellow powder.

Step D

15

A solution of m-guanidinohippuric acid (0.506 g, 1.855 mmol) in dimethylformamide (5 mL) and N-20 methylmorpholine (0.187 g, 1.855 mmol) was cooled to 0°C and was stirred for 15 minutes. Isobutylchloroformate (0.253 g, 1.855 mmol) was added in three portions. After 10 minutes, 4-amino-3,4-dihydrothiocoumarin hydrochloride (0.404 g, 1.855 mmol) was added in one portion followed by 25 N-methylmorpholine (0.187 g, 1.855 mmol). The reaction mixture was stirred for 18 hours at room temperature. The reaction mixture was concentrated and the residue was dissolved in tetrahydrofuran/water (1:1, 5 mL) and was chromatographed (reverse phase, 95:5 water: acetonitrile 30 over 60 minutes to 30:70 water: acetonitrile containing 0.1% TFA). The eluents were lyophilized to afford 0.300 g of the title compound as a pale yellow powder.

Proton NMR and MS were consistent with the desired product.

Example 371

Preparati n f (\pm) β -[2-[[[3-[(aminoiminomethyl)-amino]phenyl]carbonyl]amino]acetyl]amino]-5-chloro-2-mercaptobenzenepropanoic acid, dilithium salt

10 H NH2 SH OH

15 <u>Step λ</u>

20

25

30

Synthesis of S-(4-Chlorophenyl) Thiocinnamate: A solution of cinnamoyl chloride (26.0 g, 156.3 mmol) in dichloromethane (100 mL) was added to a solution of thiophenol (22.6 g, 156.3 mmol) and pyridine (12.6 mL) in dichloromethane (200 mL) in an ice-water bath. After 18 hours at room temperature, the reaction mixture was washed with dilute hydrochloric acid (100 mL, 1N), brine (100 mL), dried (MgSO₄) and was concentrated to afford 41.0 g (96%) of the desired thioester as a crystalline solid.

Step B

Synthesis of 6-Chlorothiocoumarin: A powdered mixture of S-(4-chlorophenyl) thiocinnamate (19.4 g) and aluminum chloride (52 g) was stirred and heated at 125°C for 3 hours. The hot reaction mixture was poured carefully over ice/water, then was extracted with ethyl acetate (3x300 mL), washed with brine (200 mL), dried (MgSO₄) and was concentrated. The residue was triturated

with hexane/ethyl acetate to afford 2.0 g (14%) of the desir d product as pale yellow crystals.

Step C

Synthesis of 4-amino-6-chloro-3,4-dihydrothiocoumarin 5 hydrochloride salt: Lithium hexamethyldisilazane (6.4 mL, 1N, 6.4 mmol) was added slowly to a solution of 6-chlorothiocoumarin (1.05 g, 5.345 mmol) in tetrahydrofuran (20 mL) at -78°C. After 45 minutes, the reaction mixture was warmed up to 0°C, then was quenched 10 with glacial acetic acid (0.321 g). After 10 minutes, the reaction mixture was partitioned between ethyl acetate (100 mL) and sodium bicarbonate (100 mL). The organic layer was dried (MgSO4) and was concentrated. The residue obtained was dissolved in ether (100 mL) and dioxane/HCl 15 (20 mL, 4N) was added. The precipitate formed was filtered and the solid was dried in vacuo to afford (0.80 g, 60%) of the desired product as a yellow powder.

20 Step D

A solution of m-guanidinohippuric acid (0.548 g, 2.0 mmol) in dimethylformamide (5 mL) and N-methylmorpholine (0.220 mL, 2.0 mmol) was cooled to 0°C and was stirred for 15 min. Isobutylchloroformate (0.260 mL, 2.0 mmol) was added in three portions. After 10 minutes, 4-amino-6-25 chloro-3,4-dihydrothiocoumarin hydrochloride (0.50 g, 2.0 mmol) was added in one portion followed by Nmethylmorpholine (0.220 mL, 2.0 mmol). The reaction mixture was stirred for 18 hours at room temperature. 30 reaction mixture was concentrated and the residue was dissolved in tetrahydrofuran/water (1:1, 5 mL) and was chromatographed (reverse phase, 95:5 water: acetonitrile over 60 minutes to 30:70 water: acetonitrile containing 0.1% TFA). The eluents were basified with an aqueous

solution f lithium hydr xide and th n was lyophilized to aff rd 0.300 g f th title c mp und as a pale yellow powder.

MS and NMR wer consistent with the proposed structure.

5

10

15

The above compound is prepared using the procedure of

Example 374 and substituting (RS)-4-amino-6,8-dichlorohydrocoumarin hydrochloride prepared in Example 237 for
the compound of Example 233, Step B. The desired product
is isolated by C-18 RPHPLC.

EXAMPLE 376

The above compound is prepared using the procedure of
Example 374 and substituting (RS)-4-amino-6-chlorohydrocoumarin hydrochloride prepared in Example 231 for
the compound of Example 233, Step B. The desired product
is isolated by C-18 RPHPLC.

15

5

EXAMPLE 377

25 The above compound is prepared using the procedure of Example 374 and substituting the compound prepared in Example 227 for the compound of Example 233, Step B. The desired product is isolated by C-18 RPHPLC.

20

EXAMPLE 378

The above compound is prepared using the procedure of
Example 374 and substituting (RS)-4-amino-6-nitrohydrocoumarin hydrochloride prepared in Example 226 for
the compound prepared in Example 233, Step B. The desired
product is isolated by C-18 RPHPLC.

15 EXAMPLE 379

The above compound is prepared from the product of Example 378 using the conditions of Example 234. The desired product is isolated by C-18 RPHPLC.

EXAMPLE 380

The above compound is prepared using the procedure of
Example 374 and substituting the compound prepared in
Example 235, Steps A-C and two equivalents of NMM in the
coupling step for the compound prepared in Example 233,
Step B and one equivalent of NMM. The desired product is
isolated by C-18 RPHPLC.

15

20

5

EXAMPLE 381

25

The above compound is prepared using the procedure of Example 374 and substituting (RS)-4-amino-6-methyl-hydrocoumarin hydrochloride (prepared in Example 88) for the compound prepared in Example 233, Step B. The desired product is isolated by C-18 RPHPLC.

30

EXAMPLE 382

The above compound is prepared using the procedure of

Example 374 and substituting (RS)-4-amino-hydrocoumarin
hydrochloride (prepared in Example 87) for the compound
prepared in Example 233, Step B. The desired product is
isolated by C-18 RPHPLC.

15

5

EXAMPLE 383

20

The above compound is prepared using the procedure of
Example 374 and substituting (RS)-4-amino-7-methoxyhydrocoumarin hydrochloride (prepared in Example 222) for
the compound prepared in Example 233, Step B. The desired
product is isolated by C-18 RPHPLC.

30

10

15

5

The above compound is prepared using the procedure of Example 374 and substituting (RS)-4-amino-8-methoxy-hydropsoralen hydrochloride (prepared in Example 223) for the compound prepared in Example 233, Step B. The desired product is isolated by C-18 RPHPLC.

Step A

10 Preparation of

15

20

5

The above compound is prepared from 7,8-methylenedioxy-coumarin (which may be prepared from 7,8-dihydroxy-chromen-2-one according to P. Castillo, J.C. Rodriguez-Ubis, and F. Rodriguez, Synthesis, 10, 839-840 (1986)) using the procedure of Example 233, Steps A and B.

Step B

25 The above Example compound is prepared using the procedure of Example 374, substituting the hydrochloride salt of the product of Step A for the compound prepared in Example 233, Step B. The desired product is isolated by C-18 RPHPLC.

15

EXAMPLE 386

Step A

10 Preparation of

The above compound is prepared from 6,7
20 methylenedioxy-coumarin [which may be prepared from 6,7dihydroxy-chromen-2-one according to Spaeth, et al., Chem.

Ber., 70, 702 (1937)] using the procedure of Example 233,
Steps A and B.

25 Step B

30

The above Example compound is prepared using the procedure of Example 374 and substituting the hydrochloride salt of the product of Step A for the compound prepared in Example 233, Step B. The desired product is isolated by C-18 RPHPLC.

15

EXAMPLE 387

Step A

10 Preparation of

The above compound is prepared from 5,6
20 methylenedioxy-coumarin [prepared from 5,6-dihydroxy-chromen-2-one according to P. Castillo, J.C. Rodriguez-Ubis, and F. Rodriguez, Synthesis 10, 839-840 (1986)] using the procedure of Example 233, Steps A and B.

25 <u>Step B</u>

30

The above Example coumpound is prepared using the procedure of Example 374, substituting the hydrochloride salt of the hydrochloride salt of the product of Step A for the compound prepared in Example 233, Step B. The desired product is isolated by C-18 RPHPLC.

The above compound may be prepared by reacting
esculin (Aldrich, rendered substantially free from water
of hydration by storage of P₂O₅ in a vacuum dessicator)
according substantially to the procedure of S. Kato, et
al., Bull. Chem. Soc. Jap., 54, 6, 1981, 1895-1896, for
the conversion of phenyl-α-D-glucoparanoside to phenyl
2,3,4,6-tetra-0-benzyl-α-D-glucoparanoside and
substituting the appropriate molar quantities of reagents
to effect complete conversion of esculin to the above
compound. The desired product may be isolated by standard
silica gel chromatography or by preparative C-18 RPHPLC.

10

15

Step B

The above compound is prepared using the procedure of Example 233, Step B and substituting the product of Step A for the product of Example 233, Step A.

Step C

The above compound is prepared using the procedure of

Example 374, substituting the hydrochloride salt of the
product of Step B for the compound prepared in Example

233, Step B. The desired product is isolated by C-18
RPHPLC.

Step D

5

10

15

20

The above compound is prepared by taking the product of Step C, dissolving in a suitable solvent (e.g. aqueous ethanol), transferring to a Fischer-Porter pressure bottle equipped with an inlet and outlet valve, pressure gauge and pressure relief valve and removing the benzyl groups by standard catalytic hydrogenolysis procedure: 5% Pd on carbon catalyst and hydrogen atmosphere until the debenzylation reaction is substantially complete. The desired product is isolated by C-18 RPHPLC.

HN H OH CI

Step A

5

10 Preparation of

H₂N CI

The above compound is prepared using substantially the procedure of Example 235, Steps A-C.

Step B

The above Example compound is prepared using substantially the procedure of Example 235, Steps D and E and is isolated using preparative C-18 RPHPLC.

25

15

Step A

10 Preparation of 4-chloro-2-iodophenol

15

5

The above compound is prepared according to the procedure of K.J. Edgar and S.N. Falling, J. Org. Chem., 20 55, 16, 1990, 5287-5291.

Step B

Preparation of 5-chloro-3-iodosalicylaldehyde

25

30

4-chloro-2-iodophenol prepared in Step A is converted to the salicylaldehyde using the procedure of G. Casiraghi, et al., J.C.S. Perkin I, 1978, 318-321.

Step C

Preparation f 6-chl r -8-iodoc umarin

5

i Ci

10

15

5-chloro-3-iodosalicylaldehyde is converted into the corresponding coumarin, 6-chloro-8-iodocoumarin, using substantially the procedure of Example 233, Step A and substituting 5-chloro-3-iodo-salicylaldehyde for 3-bromo-5-chlorosalicylaldehyde. The desired product may be isolated by standard silica gel chromatography or distillation.

Step D

20 Preparation of (R,S)-4-amino-6-chloro-8-iodo-hydrocoumarin

25

The above compound is prepared using substantially
the procedure of Example 233, Step B and substituting the
product of Step C for 3-bromo-5-chlorosalicylaldehyde to
give the product as substantially pure hydrochloride salt.

Step E

The above Example c mpound is prepared using the procedure f Example 274 and substituting the product of Step D for the compound prepar d in Exampl 233, St p B. The desired product is isolated by C-18 RPHPLC.

EXAMPLE 391

The above compound is prepared using substantially
the procedure of Example 86, Step D, substituting 3guanidino-5-trifluoromethylhippuric acid hydrochloride for
GIHA HCl. The desired product is isolated by C-18 RPHPLC.

Step A

Preparation of

10

5

15

20

The above compound is prepared using substantially the procedure of Example 235, Step A, substituting BOC-L-aspartic acid-4-tert-butyl ester (Fluka) for 5-bromonicotinic acid.

Step B

Preparation of

25

30

The above compound is prepared according to substantially the procedure of M.R. Angelastro, et al., J. Med. Chem., 1994, 37, 4538-4554, substituting the product of Step A for Reference compound $2 \in (S)-[1-$

[methoxymethylamino)carbonyl]-2-methylpropy]carbamic acid, 1,1-dim thyl thyl ester} and depr tecting acc rding to substantially the procedur employed for obtaining reference compound 3 to obtain the above compound as the HCl salt.

Step C

The above Example compound is prepared using substantially the procedure of Example 85, Step A,

substituting the product of Step B for glycine t-butyl ester and substituting 3-guanidino-5trifluoromethylhippuric acid hydrochloride for GIHA HCl.
The desired product may be obtained by C-18 RPHPLC.

15

EXAMPLE 393

Step A

Preparation of 3-N-t-Boc-amino-4-hydroxy-(3S)-butyric acid benzyl ester

N-t-Boc-L-aspartic acid, β-benzyl ester (10.0 mmole) was dissolved in 10 mL of THF and added dropwise over a period of 30 minutes to a 0°C solution of BH₃-THF (20 mL, 20.0 mmole), under argon. After the mixture was stirred for an additional 1-2 hours at 0°C, the reaction was quenched by dropwise addition of 10% acetic acid in methanol and the solvent evaporated. The oil residue was dissolved in ethyl acetate and extracted with 1N HCl, water, and 1M NH₄HCO₃. The ethyl acetate layer was dried (Na₂SO₄) and volatiles evaporated to give an oil was crystallized from isopropanol/hexane (mp 56-57°C): H NMR, CDCl₃, δ, 1.45 (s, 9H), 2.65 (d, 2H), 3.68 (d, 2H), 5.12 (s, 2H), 5.25 (m, 1H), 7.35 (m, 5H).

25

Step B Preparation of

30

10

15

20

The 3-N-t-Boc-amino-4-hydr xy-butyric acid benzyl ester prepared in Step A was oxidized to the corresp nding aldehyde using the following Swern oxidation conditi ns: oxalyl chl ride (6.40 g, 20.72 mm l) was diss lved in dry CH₂Cl₂ (25 mL) under argon and cooled to -63°C using a dry ice/chloroform bath. Dry DMSO (g, 41.4 mmole) dissolved in CH₂Cl₂ (12 mL) was added in a dropwise fashion over 15 minutes. The alcohol (6.40 g, 20.7 mmole), dissolved in methylene chloride (50 mL) was then added over 10 minutes. After stirring the reaction mixture for an additional 10 minutes, Et,N (11.6 mL, 82.9 mmole, 4.0 equivalents) in CH₂Cl₂ (25 mL) was added over 15 minutes. The resulting mixture was stirred for 15 minutes and quenched by addition of water (31 mL). The resulting slurry was poured onto hexanes (250 mL) and the organic layer washed with aqueous KHSO4. The aqueous layer was extracted with diethyl ether and the combined organic extracts were washed with saturated NaHCO3, dried (Na2SO4) and evaporated to give 5.8 g of a light yellow oil which was substantially the desired aldehyde. A small portion was purified by flash chromatography (hexane: ethyl acetate, Merck 60 silica gel): H NMR (300 MHz), CDCl3, 8, 1.46 (s, 9H), 2.95 (m, 2H), 4.37 (m, 1H), 5.13 (s, 2H), 5.62 (m, 1H), 7.38 (m, 5H), 9.65 (s, 1H), MS(FAB+) 314.3 (M+Li).

25

Step C

Preparation of 3-N-t-Boc-amino-4-hydroxy-4-phenyl-(3S)-butyric acid benzyl ester

To a diethyl ether (150 mL) solution of aldehyde

30 (5.0 g, 15 mmole) prepared in Step B at -40°C
(acetonitrile/dry ice bath) was added in a dropwise
fashion a 3.0 M solution of phenyl magnesium bromide in
diethyl ether (10.8 mL, 32.6 mmole, 2 equivalents). The
resulting mixture was stirred for 15 minutes and warmed to

room temperature. After several minutes the mixture was poured int 1 M K_2HPO_4 . The aqu us layer was xtracted again with ether, the combined ether layers washed with aqueous NaHCO₃, dried (Na₂SO₄) and evap rat d to give an oil (5.66 g) that was used in the next step without further purification: ¹H NMR (300 MHz), CDCl₃, δ , 1.4 (multiple singlets, 9H), 2.65 (m, 2H), 4.18 (m, 1H), 5.15 (m, 2H), 7.4 (m, 10H); MS(FAB+) 392.4 (M+Li+).

10 Step D

Preparation of 2-phenyl-3-N-t-Boc-amino-5-oxo-3S-furan The hydroxy-ester product of Step C (5.31 g, 13.8 mmole) was taken up in benzene (100 mL) a catalytic amount of camphor sulfonic acid was added and the solution 15 refluxed (Dean-Stark) for five hours and the solvent removed. Conversion to lactone was 50% so the reaction was reconstituted and refluxed for a further 6 hours. Solvent was removed and the resulting oil taken up in ethyl acetate. The organic layer was washed with aqueous saturated NaHCO3, dried (Na2SO4) and evaporated to give a 20 mixture of the desired diastereomeric lactones as a viscous oil in a 2:1 ratio and benzyl alcohol: H NMR (300 MHz), CDCl₃, δ , 1.35, 1.45 (s, 2:1, 9H), 2.75 (m, 2H), 4.5, 4.75 (m, 2:1, 1H), 4.7 (s, 2H), 5.1 (m, 1H), 5.7 (d, 25 1H), 7.35 (m, 10H); MS(FAB+) 284.6 (M+Li+).

Step E

Preparati n of 2-phenyl-3-amino-5-oxo-3S-furane, hydr chloride

5

10

The lactone (0.94 g, 3.4 mmole) prepared in Step D was treated with 4 N HCl in dioxane (20 mL) at room temperature until gas evolution ceased. Excess HCl was removed by evaporation and the desired amino lactone isolated as a white crystalline solid that was dessicated (0.48 g, 66%): ¹H NMR (300 MHz), d₆ DMSO, 6, 3.05 (m, 2H), 4.4 (m, 1H), 5.85 (d, 1H), 7.4 (s, 5H), 8.2 (bs, 3H); MS(FAB+) 178 (M+H+).

10

15

Step F
Preparation of

The above compound is prepared using substantially the procedure of Example 374, substituting the product of Step E for the compound prepared in Example 233, Step B. The desired product is isolated by C-18 RPHPLC.

10

15

5

The above compound is prepared following substantially the procedure of Example 393, substituting 4-fluorophenyl magensium bromide for phenyl magnesium bromide in Step C.

EXAMPLE 395

20

25

30

The above compound is prepared following substantially the procedure of Example 393, substituting 4-chlorophenyl magensium bromide for phenyl magnesium bromide in Step C.

10

15

5

The above compound is prepared following substantially the procedure of Example 393, substituting 4-bromophenyl magnesium bromide for phenyl magnesium bromide in Step C.

EXAMPLE 397

20

25

The above compound is prepared following substantially the procedure of Example 393, substituting vinyl magnesium bromide for phenyl magnesium bromide in Step C.

The above compound is prepared following

substantially the procedure of Example 393, substituting ethynylmagnesium bromide for phenyl magnesium bromide in Step C.

EXAMPLE 399

15

5

20

The above compound is prepared following

substantially the procedure of Example 393, substituting allylmagnesium bromide for phenyl magnesium bromide in Step C.

The above compound is prepared following substantially the procedure of Example 393, substituting cyclopentylmagnesium bromide for phenyl magnesium bromide in Step C.

15

20

5

EXAMPLE 401

25 The above compound is prepared following substantially the procedure of Example 393, substituting phenylethynylmagnesium bromide for phenyl magnesium bromide in Step C.

EXAMPLE 402

The above compound is prepared following substantially the procedure of Example 393, substituting methylmagnesium bromide for phenyl magnesium bromide in Step C.

15 EXAMPLE 403

25 The above compound is prepared following substantially the procedure of Example 393, substituting isopropylmagnesium bromide for phenyl magnesium bromide in Step C.

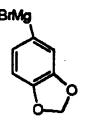

Step A

Preparation of 4-bromomagnesium-1,2- (methylenedioxy) benzene

15

10

5

20

25

To 1.74 gm (0.072 mole) freshly-ground magnesium in 100 mL dry THF in a 250 mL round bottom flask was added in a dropwise fashion 13.1 gm (0.062 mole) 4-bromo-1,2-(methylenedioxy)benzene in 50 mL dry THF. The reaction mixture was sonicated during the addition and the reaction temperature maintained below 50°C by use of a water bath. Upon completion of reaction the mixture was filtered and used in the next step.

Step B

Preparation of

5

10

The above compound is prepared following substantially the procedure of Example 393, substituting the grignard of Step A for phenyl magnesium bromide in Example 393, Step C.

Step A

Preparation of

10

5

15

The above compound is prepared according to the procedure of Example 55, Step A, substituting methyl-2-formylbenzoate for 2-furancarboxaldehyde.

20

Step B

Preparation of

30

The above compound is prepared according to the procedure of Example 55, Steps B and C, substituting the product of Step A for the product of Example 55, Step A.

Step A

5

10 Preparation of

The product of Example 393, Step C is oxidized to the above ketone using the procedure of Example 393, Step B.

Step B

Preparation of

25

30

15

The above product is prepared using the procedure of Example 393, Step E using the product of Step A above.

Step C

Preparation of

HN H OH

10

15

5

The Example compound is prepared using substantially the procedure of Example 374, substituting the product of Step B for the compound prepared in Example 233, Step B. The desired product is obtained by converting the benzyl ester to the corresponding carboxylic acid by hydrolysis using substantially the procedure of Example 4 and isolating the desired product by C-18 RPHPLC.

- 639 -

Example 407-414

Using the procedure of Example 406, substituting the appr priate protected aspartyl alcohols prepared in Examples 394-403 for the aspartyl alcohol of Example 406, Step A, the following representative compounds are prepared:

Ex. 408

Ex. 409

Ex. 410

Ex. 413

Example 415

Preparation of

10

20

25

5

15 Step A

To the product of Example 23, Step A in DMF is added excess 1,3-diamino-2-hydroxypropane and catalytic DMAP and the solution heated until substantially complete conversion of the starting S-methylisothiouronium salt is achieved. The desired product may be isolated by precipitation of the zwitterion or by preparative C-18 RPHPLC (for a related procedure see U.S. Patent 2,899,426). After drying to remove water, the hydrochloride salt is formed by stirring the zwitterion in excess 4N HCl in dioxane (Aldrich) and isolating the HCl salt by filtration.

Step B

HO-CNH HO HO COH

The above compound is prepared using substantially

the procedure of Example 233, substituting the product of
Step A for GHIA hydrochloride in Example 233, Step C.

Example 416-439

Using substantially the procedur f Example 415, substituting the appropriat amin f r (RS)-4-amino-6-chloro-8-bromo-hydrocoumarin hydrochloride the following representative compounds may be prepared:

- 650 -

Example 440

Step A

10

5

15

The above compound was prepared using the procedure of Example 233, Steps A and B, substituting 3,5
20 dichlorosalicylaldehyde for 3-bromo-5chlorosalicylaldehyde in Step A. NMR and MS were consistent with the proposed structure (HCl salt).

Step B

25

30

The above compound is prepared by treating the product of Step A with dry HCl gas in methanol in a

Suitable reactor while maintaining vig rous stirring. Upon completion f reaction excess HCl is removed under vacuum and the solution concentrated to dryness. The crude product is used in the next step. Alternatively, the product may be isolated by C-18 RPHPLC and lyophilized to obtain substantially pure material.

Step C

10

5

15

The above compound is prepared by taking the product of Step B and dissolving in DMF. To the stirred solution is added an equimolar amount of both di-tert butyl dicarbonate and triethylamine with a catalytic amount of DMAP. Upon completion of the reaction volatiles are removed under vacuum and the product partitioned between dilute aqueous hydrochloric acid and ethyl acetate. The organic layer is washed with water, dried (Na₂SO₄) and concentrated to provide substantially the above compound that may be employed in the next step without further purification. Alternatively, the product may be isolated by C-18 RPHPLC and lyophilized to obtain substantially pure material.

Step D

10

15

20

5

The above compound is prepared by adding under an inert atmosphere an equivalent of acetic anhydride or acetyl chloride and an equivalent of triethylamine to a stirred solution of the product from Step C in DMF. Upon completion of reaction volatiles are removed under vacuum and the reaction residue partitioned betwen dilute aqueous hydrochloric acid and ethyl acetate. The organic layer is washed with aqueous sodium bicarbonate, dried (Na₂SO₄) and concentrated to provide substantially the above compound that may be employed in the next step without further purification. Alternatively, the product may be isolated by C-18 RPHPLC and lyophilized to obtain substantially pure material.

25 Step E

The ab ve comp und is prepared by treating the product of Step D with 4 N HCl in dioxane with vigor us stirring. Sh rtly aft r cessation of gas evolution excess HCl gas is removed in vacuo and th reaction mixture c ncentrated at less than about 40°C. The product is triturated with diethyl ether to obtain substantially the desired product. Alternatively, the product may be isolated by C-18 RPHPLC and lyophilized to obtain substantially pure mater.

10

15

Step F

HN H CH₉

CH₉

CH₉

CH₉

20

The above compound is prepared according to the procedure of Example 230, Step B, substituting the product of Step E for the product of Example 230, Step A.

10

5

The above compound is prepared by treating a DMF mixture of the compound of Example 225 with two equivalents of N-methylmorpholine and one equivalent of acetic anhydride or acetyl chloride. Upon completion of the reacation the desired product may be isolated by C-18 RPHPLC and lyophilization.

Example 442

20

25

30

The above compound is prepared by treating a DMF mixture of the compound of Example 225 with two equivalents of N-methylmorpholine and one equivalent of benzoic anhydride or benzoyl chloride. Upon completion of the reaction the desired product may be isolated by C-18 RPHPLC and lyophilization.

5

Example 443-452

Using substantially the procedure of Example 230, Step B and substituting the appropriate amine for the product of Example 230, Step A, the foll wing representative compounds may be prepared:

Ey. 452

Example 453-460

Using the procedure f Example 393, substituting the appropriate amine hydrochloride f r the pr duct f Step E in Step F and substituting GIHA HCl for 3-guanidino-5-trifluoromethylhippuric acid in Step F the following representative compounds may be prepared:

Using the pr cedure f Example 406, substituting the appr priat protected aspartyl alcohol prepared in Examples 394-403 for the aspartyl alcohol of Example 406, Step A, and substituting GIHA HCl for 3-guanidino-5-trifluoromethylhippuric acid in Example 393, Step F the following representative compounds may be prepared:

5

10

25

Example 470

Preparati n of

Ph. OPh NH CO₂E

Step A

To 3,4,5,6-tetrahydro-2-pyrimidinethiol (Aldrich) (5.0 g, 0.043 mole) and triethylamine (8.7 g, 0.086 mole) in CH₂Cl₂ (50 mL) was added dropwise and at ice bath temperature, phenylchloroformate [(Aldrich) 13.5 g, 0.086 mole)]. The reaction was then stirred overnight at room temperature. The precipitate was filtered and washed with CH₂Cl₂. The CH₂Cl₂ filtrate was washed with H₂O (3X), dried over MgSO₄ and removed under vacuum. The residue was recrystallized from 50% EtOAc/Hexane to yield 9.03 g of 3,4,5,6-tetrahydro-2-pyrimidinethione-N,N'-diphenylcarbamate as a yellow solid.

MS and NMR are consistent with the desired structure.

Step B

To the product from Example 282, Step C (200 mg, 0.00042 mole), the product from Step A above (150 mg, 0.00042 mole) and triethylamine (142 mg, 0.0014 mole) in 3 mL DMF was added 250 mg (0.00046 mole) HgCl₂ at ice bath temperature. The reaction was stirred at ice bath temperature for ½ hour and at room temperature for 2 hours. 100 mg additional HgCl₂ was added and the reaction was stirred overnight at 60°C. Excess ethyl acetate was added and the slurry was filtered thr ugh

5

celite. The filtrate was washed with H_2O (3X), passed thr ugh a pad f silica gel and th product isolated by silica gel chromatography to yield the above c mpound (110 mg) as a white solid.

Preparation of

5

10

Step A

To 3,4,5,6-tetrahydro-2-pyrimidinethiol (Aldrich)
(10 g, 0.086 mole) in absolute ethanol (75 mL) is added
methyl iodide (12.2 g, 0.086 mole). The reaction was
stirred at reflux for 2.5 hours. The solvent was
removed under vacuum and the residue dried to yield
3,4,5,6-tetrahydro-2-methylthiopyrimidine·HI (22 g) as
a white solid.

MS and HMR were consistent with the desired structure.

25 <u>Step B</u>

30

35

To the product from Step A above (5.16 g, 0.02 mole) and triethylamine (4.1 g, 0.04 mole) in CH₂Cl₂ (25 mL) was added phenylchloroformate (Aldrich) (3.13 g, 0.02 mole) dropwise at ice bath temperature. The reaction was then stirred overnight at room temperature. The precipitate was filtered and washed with CH₂Cl₂. The CH₂Cl₂ from the filtrate was washed with H₂O (3X), dried over MgSO₄ and removed under vacuum to yield 3,4,5,6-tetrahydro-2-methylthiopyrimidine-N-phenylcarbamate (4.8 g) as a white solid.

Step C

T the product from Step B above (2 g, 0.008 mole) in CH₂CN (12 mL) was added the product of Example M, Step B (1.84 g, 0.008 m le). The r acti n was stirred at reflux overnight and the product isolated by RPHPLC to yield 3,4,5,6-tetrahydro-N-phenylcarbamyl-2-pyrimidine-m-aminohippuric acid·TFA (1 g) as a white solid.

10 Step D

15

The above compound was prepared according to the methodology of Example 174, substituting an equivalent amount of 3,5-dichlorobenzaldehyde for 3,4-dichlorobenzaldehyde in Example 174, Step A and substituting an equivalent amount of the product from Step C above for m-guanidinohippuric acid·HCl in Example 174, Step B.

Preparation of

5

Step A

10

15

20

30

35

To 2-methylthio-2-imidazoline HI (Aldrich) (10 g, 0.041 mole) and triethylamine (4.14 g, 0.041 mole) in CH_2Cl_2 (50 mL) was added BOC anhydride (Aldrich) (8.94 g, 0.041 mole) at ice bath temperature. The reaction was stirred overnight at room temperature. The CH_2Cl_2 was washed with H_2O (3 X), dried over MgSO₄, washed with H_2O (3 X), dried over MgSO₄ and removed under vacuum to yield N-BOC-2-methylthio-2-imidazoline (8.1 g) as a clear liquid which turned to a white solid upon standing.

MS and NMR were consistent with the desired structure.

25 Step B

To the product of Step A above (2.7 g, 0.0124 mole) in CH₃CN (6 mL) was added 3-amino-5-trifluoromethylbenzoic acid (synthesized by catalytic hydrogenation (Pd/C) of 3-nitro-5-trifluorobenzoic acid (Lancaster) followed by treatment with HCl) (3 g, 0.0124 mole). The reaction was stirred at 35-40°C for 10 days. After cooling to room temperature, the precipitate was filtered, washed with CH₃CN and dried to yield 3-(N-BOC-4,5-dihydroimidazol-2-yl)amino-5-trifluoromethylbenzoic acid HCl (3.2 g) as a white solid.

MS and NMR were consistent with the desired structure.

Step C

5

10

The above compound was prepared according to the methodology of Example 200, substituting an equivalent amount of the product from Step B above for the product from Step A in Example 199, Step B and by additionally treating the intermediate ethyl ester, N-BOC derivative with TFA for 1 hour to remove the BOC protecting group.

- 670 -

Example 473

Preparati n of

5

10

Step A

To 3-amino-5-trifluoromethylhippuric acid hydrochloride [prepared according to Example M, Steps A and B substituting 3-nitro-5-trifluoromethylbenzoyl 15 chloride (prepared from 3-nitro-5trifluoromethylbenzoic acid (Lancaster) and thionyl chloride for M-nitrobenzoyl chloride in Example M, Step A] (3 g, 0.01 mole) in CH,CN (5 mL) was added the 20 product from Example 472, Step A (2.2 g, 0.01 mole). The reaction was stirred at 35°C for 3 days then at reflux for 4 hours. After cooling, the CH3CN was decanted off, the residue slurried several times in ether (ether decanted off) and then dried to yield 3-25 (4,5-dihydro-1H-imidazol-2-yl)amino-5trifluoromethylhippuric acid·HCl (2.5 g) as a white solid.

MS and NMR were consistent with the desired structure.

30

35

Step B

The above compound was prepared according to the methodology of Example 210, substituting an equivalent amount of the product from Step A above for m-guanidinohippuric acid·HCl in Example 174, Step B.

Preparation of

EtOOC TFA CI CO2Et

10

15

20

30

35

5

Step A

To 2-methylthio-2-imidazoline·HI (Aldrich) (10 g, 0.041 mole) and triethylamine (8.3 g, 0.0082 mole) in CH₂Cl₂ (50 mL) was added ethylchloroformate (Aldrich) (4.5 g, 0.041 mole) dropwise at ice bath temperature. The reaction was stirred overnight at room temperature. The precipitate was filtered and washed with CH₂Cl₂. The CH₂Cl₂ from the filtrate was washed with H₂O (3X), dried over MgSO₄ and removed under vacuum to yield 2-methylthio-2-imidazoline-N-ethylcarbamate (7.1 g) as a clear yellow oil.

MS and NMR were consistent with the desired structure.

25 Step B

To the product from Step A above (5.73 g, 0.0305 mole) in CH₃CN (12 mL) was added m-aminohippuric acid·HCl (Example M, Step B) (7.02 g, 0.0305 mole). The reaction was stirred overnight at room temperature then at 50°C for 6 hours and at 80°C for 2 hours. After cooling to room temperature and stirring at room temperature overnight, the precipitate was filtered, washed with CH₃CN and dried to yield 3-(4,5-dihydro-N-ethylcarbamate-imidazol-2-yl)aminohippuric acid·HCl (9.6 g) as a white solid.

Step C

The above compound was prepar d acc rding t the methodology of Exampl 174, substituting an equivalent amount of the product from Step B above f r m-aminohippuric acid in Example 174, Step B and an equivalent amount of the product from Example 230, Step A for the product from Example 174, Step A in Example 174, Step B.

Preparation of

5

10

15

The above compound was prepared according to the methodology of Example 474, substituting an equivalent amount of phenylchloroformate (Aldrich) for ethylchloroformate in Example 474, Step A and by heating the reaction mixture at 70°C for 8 hours then room temperature for 2 days in Example 474, Step B.

Using the methodologies, reagents and conditions exemplified in the schemes and examples of this disclosure (or the synthesis of reagents from readily available starting materials via methodologies known to those skilled in the art), the following compounds of the present invention are synthesized:

Examples 476-517

VITRONECTIN ADHESION ASSAY

MATERIALS

Human vitronectin receptor $(\alpha_i\beta_i)$ was purified from human placenta as previously described [Pytela et al., Methods in Enzymology, 144:475-489 (1987)]. 10 vitronectin was purified from fresh frozen plasma as previously described [Yatohgo et al., Cell Structure and Function, 13:281-292 (1988)]. Biotinylated human vitronectin was prepared by coupling NHS-biotin from Pierce Chemical Company (Rockford, IL) to purified 15 vitronectin as previously described [Charo et al., <u>J. Biol. Chem.</u>, 266(3):1415-1421 (1991)]. Assay buffer, OPD substrate tablets, and RIA grade BSA were obtained from Sigma (St. Louis, MO). Anti-biotin 20 antibody was obtained from Calbiochem (La Jolla, CA). Linbro microtiter plates were obtained from Flow Labs (McLean, VA). ADP reagent was obtained from Sigma (St. Louis, MO).

Solid Phase Receptor Assays

This assay was essentially the same as previously reported [Niiya et al., Blood, 70:475-483 (1987)]. The purified human vitronectin receptor (α,β_3) was diluted from stock solutions to 1.0 μ g/mL in Tris-buffered saline containing 1.0 mM Ca⁺⁺, Mg⁺⁺, and Mn⁺⁺, pH 7.4 (TBS⁺⁺⁺). The diluted receptor was immediately transferred to Linbro microtiter plates at 100 μ L/well (100 ng receptor/well). The plates were sealed and incubated overnight at 4°C to allow the receptor to bind to the wells. All remaining steps were at r m

temperature. The assay plates were emptied and 200 μL of 1% RIA grade BSA in TBS+++ (TBS+++/BSA) were added to block exposed plastic surfaces. F llowing a 2 h ur incubati n, the assay plates were washed with TBS+++ using a 96 well plate washer. Logarithmic serial dilution of the test compound and controls were made starting at a stock concentration of 2 mM and using 2 nM biotinylated vitronectin in TBS+++/BSA as the diluent. This premixing of labeled ligand with test (or control) ligand, and subsequent transfer of 50 μ L 10 aliquots to the assay plate was carried out with a CETUS Propette robot; the final concentration of the labeled ligand was 1 nM and the highest concentration of test compound was 1.0 x 104 M. The competition occurred for two hours after which all wells were 15 washed with a plate washer as before. Affinity purified horseradish peroxidase labeled goat antibiotin antibody was diluted 1:3000 in TBS+++/BSA and 125 μ L were added to each well. After 30 minutes, the plates were washed and incubated with OPD/H2O2 substrate 20 in 100 mm/L Citrate buffer, pH 5.0. The plate was read with a microtiter plate reader at a wavelength of 450 nm and when the maximum-binding control wells reached an absorbance of about 1.0, the final Acco were recorded 25 for analysis. The data were analyzed using a macro written for use with the EXCEL spreadsheet program. The mean, standard deviation, and &CV were determined for duplicate concentrations. The mean A_{450} values were normalized to the mean of four maximum-binding controls (no competitor added) (B-MAX). The normalized values 30 were subjected to a four parameter curve fit algorithm [Rodbard et al., Int. Atomic Energy Agency, Vienna, pp 469 (1977)], plotted on a semi-log scale, and the computed concentration corresponding to inhibition of 35 50% of the maximum binding of biotinylated vitronectin (IC_{so}) and corresponding R² was reported for those compounds exhibiting great r than 50% inhibiti n at the

highest c ncentrati n tested; therwise the IC_{50} is r ported as being greater than the highest c ncentration tested. β -[[2-[[5-[(aminoiminomethyl)amin]-1- xopentyl]amino]-1-oxoethyl]amino]-3-pyridinepropanoic acid [USSN 08/375,338, Example 1] which is a potent $\alpha_{\nu}\beta_{3}$ antagonist (IC₅₀ in the range 3-10 nM) was included on each plate as a positive control.

10 PURIFIED IIb/IIIa RECEPTOR ASSAY

MATERIALS

Human fibrinogen receptor $(\alpha_m \beta_1)$ was purified from outdated platelets. (Pytela, R., Pierschbacher, M.D., Argraves, S., Suzuki, S., and Rouslahti, E. "Arginine-15 Glycine-Aspartic acid adhesion receptors", Methods in Enzymology 144(1987):475-489.) Human vitronectin was purified from fresh frozen plasma as described in Yatohgo, T., Izumi, M., Kashiwagi, H., and Hayashi, M., "Novel purification of vitronectin from human plasma by 20 heparin affinity chromatography, " Cell Structure and Function 13(1988):281-292. Biotinylated human vitronectin was prepared by coupling NHS-biotin from Pierce Chemical Company (Rockford, IL) to purified 25 vitronectin as previously described. (Charo, I.F., Nannizzi, L., Phillips, D.R., Hsu, M.A., Scarborough, R.M., "Inhibition of fibrinogen binding to GP IIb/IIIa by a GP IIIa peptide", J. Biol. Chem. 266(3)(1991): 1415-1421.) Assay buffer, OPD substrate tablets, and RIA grade BSA were obtained from Sigma (St. Louis, MO). 30 Anti-biotin antibody was obtained from Calbiochem (La Jolla, CA). Linbro microtiter plates were obtained from Flow Labs (McLean, VA). ADP reagent was obtained from Sigma (St. Louis, MO).

METHODS

Solid Phase Receptor Assays

This assay is essentially the same reported in Niiya, K., Hodson, E., Bader, R., Byers-Ward, V. Koziol, J.A., Plow, E.F. and Ruggeri, Z.M., "Increased surface expression of the membrane glycoprotein IIb/IIIa complex induced by platelet activation: Relationships to the binding of fibrinogen and platelet 10 aggregation*, <u>Blood</u> 70(1987):475-483. The purified human fibrinogen receptor $(a_{11}\beta_1)$ was diluted from stock solutions to 1.0 µg/mL in Tris-buffered saline containing 1.0 mM Ca++, Mg++, and Mn++, pH 7.4 (TBS+++). The diluted receptor was immediately transferred to 15 Linbro microtiter plates at 100 µL/well (100 ng receptor/well). The plates were sealed and incubated overnight at 4°C to allow the receptor to bind to the wells. All remaining steps were at room temperature. The assay plates were emptied and 200 µL of 1% RIA grade BSA in TBS*** (TBS***/BSA) were added to block 20 exposed plastic surfaces. Following a 2 hour incubation, the assay plates were washed with TBS+++ using a 96 well plate washer. Logarithmic serial dilution of the test compound and controls were made 25 starting at a stock concentration of 2 mM and using 2 nM biotinylated vitronectin in TBS+++/BSA as the This premixing of labeled ligand with test (or control) ligand, and subsequent transfer of 50 μL aliquots to the assay plate was carried out with a 30 CETUS Propette robot; the final concentration of the labeled ligand was 1 nM and the highest concentration of test compound was 1.0 x 104 M. The competition occurred for two hours after which all wells were washed with a plate washer as before. Affinity 35 purified horseradish peroxidase labeled goat antibiotin antibody was diluted 1:3000 in TBS+++/BSA and 125 μL wer added to each well. After 30 minutes, the

plates were washed and incubated with ODD/H,O, substrate in 100 mM/L citrat buffer, pH 5.0. The plate was read with a microtiter plate r ad r at a wavelength of 450 nm and wh n the maximum-binding c ntr l wells reached an absorbance of about 1.0, the final Ass were recorded for analysis. The data were analyzed using a macro written for use with the EXCEL™ spreadsheet program. The mean, standard deviation, and &CV were determined for duplicate concentrations. The mean Asso values were 10 normalized to the mean of four maximum-binding controls (no competitor added) (B-MAX). The normalized values were subjected to a four parameter curve fit algorithm, [Robard et al., Int. Atomic Energy Agency, Vienna, pp 469 (1977)], plotted on a semi-log scale, and the 15 computed concentration corresponding to inhibition of 50% of the maximum binding of biotinylated vitronectin (IC₅₀) and corresponding R² was reported for those compounds exhibiting greater than 50% inhibition at the highest concentration tested; otherwise the ICm is reported as being greater than the highest 20 concentration tested. β -[[2-[[5-[(aminoiminomethyl)amino]-1-oxopentyl]amino]-1oxoethyl]amino]-3-pyridinepropanoic acid [USSN 08/375,338, Example 1] which is a potent α, β , antagonist (ICso in the range 3-10 nM) was included on each plate 25 as a positive control.

Human Platelet Rich Plasma Assays

Healthy aspirin free donors were selected from a

pool of volunteers. The harvesting of platelet rich
plasma and subsequent ADP induced platelet aggregation
assays were performed as described in Zucker, M.B.,
"Platelet Aggregation Measured by the Photometric
Method", Methods in Enzymology 169(1989):117-133.

Standard venipuncture techniques using a butterfly
allowed the withdrawal of 45 mL of whole blood into a

60 mL syringe c ntaining 5 mL of 3.8% trisodium

10

15

20

25

30

35

citrate. Following th r ugh mixing in th syringe, the anti-coagulated whole bl d was transf rred t a 50 mL conical p lyethylen tube. The blood was centrifuged at r om temperature f r 12 minutes at 200 xg t sediment non-platelet cells. Platelet rich plasma was removed to a polyethylene tube and stored at room temperature until used. Platelet poor plasma was obtained from a second centrifugation of the remaining blood at 2000 xg for 15 minutes. Platelet counts are typically 300,000 to 500,000 per microliter. Platelet rich plasma (0.45 mL) was aliquoted into siliconized cuvettes and stirred (1100 rpm) at 37°C for 1 minute prior to adding 50 uL of pre-diluted test compound. After 1 minute of mixing, aggregation was initiated by the addition of 50 uL of 200 uM ADP. Aggregation was recorded for 3 minutes in a Payton dual channel aggregometer (Payton Scientific, Buffalo, NY). percent inhibition of maximal response (saline control) for a series of test compound dilutions was used to determine a dose response curve. All compounds were tested in duplicate and the concentration of halfmaximal inhibition (ICm) was calculated graphically from the dose response curve for those compounds which exhibited 50% or greater inhibition at the highest concentration tested; otherwise, the IC50 is reported as being greater than the highest concentration tested.

M21 MELANOMA CELL ADHESION ASSASY

This assay involves an α, β_3 -dependent adhesion of M21 human melanoma cells to human fibrinogen-coated plastic tissue culture dishes.

Fibrinogen was purified from human plasma. Fibronectin and plasminogen were eliminated from the preparation by passing the sample over gelatin-sepharose 4B and lysine-sepharose 4B resins.

15

20

25

30

respectively. The fibrinogen is diluted to 10 µg/mL in coating buffer (20 mM Tris-HCl, 150 mM NaCl, pH 7.4).

100 µL f diluted fibrinogen is added t each well of a 96-well Immul n 2 microtiter plate (Dynatech; Chantilly, Va) and allowed to coat overnight at 4°C. Plates are blocked with 1% BSA (Miles/Pentex; Kankakee, IL) in adhesion buffer (Hank's balanced salt solution without Ca⁺⁺ or Mg⁺⁺ [HBSS--], 50 mM Hepes, 1 mg/mL BSA, pH 7.4) for 1 hour at 37°C.

M21 human melanoma cells were provided by Dr. J. Smith, La Jolla Cancer Research Institute. M21 cells are harvested from tissue culture flasks by washing with HBSS-- and adding cell dissociation solution (Sigma) and incubating for 5 minutes at 37°C.

Harvested cells are washed 3 times with adhesion assay buffer containing 200 μ M Mn⁺⁺. Cells are counted and suspended to a density of $2\times10^6/\text{mL}$ in adhesion assay buffer containing 200 μ M Mn⁺⁺. M21 cells are preincubated with antagonists of $\alpha_\nu\beta_3$ for 30 minutes at room temperature. Following the pre-incubation, the solutions containing a mixture of cells and antagonists are added to each well of the microtiter plate and allowed to bind for 30 minutes at 37°C.

Following adhesion, plates are gently washed 3 times with 200 μ L of wash buffer (50 mM Tris-HCl, 150 mM NaCl, pH 7.4) using large bore pipet tips. Plates are briefly blotted dry and 100 μ L of cell lysis buffer (50 mM sodium acetate, pH 5.0, 0.5% Triton X-100, 0.3 mg/mL p-nitrophenyl phosphate [Sigma] is added to each well. Plates are incubated for 60 minutes at 37°C and 50 μ L of 1N NaOH is added to stop the reaction. The absorbance of the wells at 412 nM is read using an automatic plate reader.

What is claimed is:

1. A c mp und of the formula

$$A = \begin{pmatrix} y_3 \\ C \\ Z^3 \end{pmatrix}_{t} \qquad \begin{pmatrix} Y \\ C \\ Z \end{pmatrix}_{n} \qquad \begin{pmatrix} CH_2)_{\overline{p}} - C - R \\ R^{11} & R^{1} \end{pmatrix}$$

or a pharmaceutically acceptable salt thereof, wherein

A is

wherein Y^{I} is selected from the group consisting of N-R², O, and S;

R² is selected from the group consisting of H; alkyl; aryl; hydroxy; alkoxy; cyano; nitro; amino; alkenyl; alkynyl; amido; alkylcarbonyl; aryloxycarbonyl; aryloxycarbonyl; haloalkoxycarbonyl; haloalkoxycarbonyl; alkylthiocarbonyl; arylthiocarbonyl; acyloxymethoxycarbonyl; alkyl optionally substituted with one or more substituent selected from lower alkyl, halogen, hydroxyl, haloalkyl, cyano, nitro, carboxyl, amino, alkoxy, aryl or aryl optionally substituted with one or more halogen, haloalkyl, lower alkyl, alkoxy, cyano, alkylsulfonyl, alkylthio, nitro, carboxyl, amino, hydroxyl, sulfonic acid, sulfonamide, aryl, fused aryl, m n cyclic heter cycles, or fused m n cyclic

heter cycles; aryl opti nally substituted with one or more substitu nt selected from halogen, haloalkyl, hydroxy, lower alkyl, alk xy, methylenedioxy, ethylenedi xy, cyan, nitro, alkylthio, alkylsulfonyl, sulfonic acid, sulfonamide, carboxyl derivatives, amino, aryl, fused aryl, monocyclic heterocycles and fused monocyclic heterocycle; monocyclic heterocycles; and monocyclic heterocycles optionally substituted with one or more substituent selected from halogen, haloalkyl, lower alkyl, alkoxy, amino, nitro, hydroxy, carboxyl derivatives, cyano, alkylthio, alkylsulfonyl, sulfonic acid, sulfonamide, aryl or fused aryl; or

R² taken together with R⁷ forms a 4-12 membered dinitrogen containing heterocycle optionally substituted with one or more substituent selected from the group consisting of lower alkyl, hydroxy, keto, alkoxy, halo, phenyl, amino, carboxyl or carboxyl ester, and fused phenyl;

- or R² taken together with R⁷ forms a 5 membered heteroaromatic ring optionally substituted with one or more substituent selected from lower alkyl, phenyl and hydroxy;
- or R² taken together with R⁷ forms a 5 membered heteroaromatic ring fused with a phenyl group;

R⁷ (when not taken together with R²) and R⁸ are independently selected from the group consisting of H; alkyl; alkenyl; alkynyl; aralkyl; amino; alkylamino; hydroxy; alkoxy; arylamino; amido, alkylcarbonyl, arylcarbonyl; alkoxycarbonyl; aryloxycarbonyl; haloalkylcarbonyl; aryloxy; haloalkoxycarbonyl; alkylthiocarbonyl;

arylthiocarbonyl; acyloxymethoxycarbonyl; cycl alkyl; bicycloalkyl; aryl; acyl; benzoyl; alkyl optionally substituted with one or m re substituent selected from 1 wer alkyl, halogen, hydroxy, haloalkyl, cyano, nitro, carboxyl derivatives, amino, alkoxy, thio, alkylthio, sulfonyl, aryl, aralkyl, aryl optionally substituted with one or more substituent selected from halogen, haloalkyl, lower alkyl, alkoxy, methylenedioxy, ethylenedioxy, alkylthio, haloalkylthio, thio, hydroxy, cyano, nitro, carboxyl derivatives, aryloxy, amido, acylamino, amino, alkylamino, dialkylamino, trifluoroalkoxy, trifluoromethyl, sulfonyl, alkylsulfonyl, haloalkylsulfonyl, sulfonic acid, sulfonamide, aryl, fused aryl, monocyclic heterocycles, fused monocyclic heterocycles; aryl optionally substituted with one or more substituent selected from halogen, haloalkyl, lower alkyl, alkoxy, methylenedioxy, ethylenedioxy, alkylthio, haloalkylthio, thio, hydroxy, cyano, nitro, carboxyl derivatives, aryloxy, amido, acylamino, amino, alkylamino, dialkylamino, trifluoroalkoxy, trifluoromethylsulfonyl, alkylsulfonyl, sulfonic acid, sulfonamide, aryl, fused aryl, monocyclic heterocycles, or fused monocyclic heterocycles; monocyclic heterocycles; monocyclic heterocycles optionally substituted with one or more substituent selected from halogen, haloalkyl, lower alkyl, alkoxy, aryloxy, amino, nitro, hydroxy, carboxyl derivatives, cyano, alkylthio, alkylsulfonyl, aryl, fused aryl; monocyclic and bicyclic heterocyclicalkyls; -SO2R10 wherein R10 is selected from the group consisting of alkyl, aryl and monocyclic heterocycles, all optionally substituted with one or more substituent selected from th gr up c nsisting of halogen, haloalkyl,

alkyl, alkoxy, cyano, nitro, amino, acylamino, trifluor alkyl, amido, alkylaminosulfonyl, alkylsulf nyl, alkylsulfonylamino, alkylamino, dialkylamino, trifluoromethylthio, trifluoroalkoxy, trifluoromethylsulfonyl, aryl, aryloxy, thio, alkylthio, and monocyclic heterocycles; and

or NR² and R³ taken together form a 4-12 membered mononitrogen containing monocyclic or bicyclic ring optionally substituted with one or more substituent selected from lower alkyl, carboxyl derivatives, aryl or hydroxy and wherein said ring optionally contains a heteroatom selected from the group consisting of O, N and S;

R⁵ is selected from the group consisting of H, alkyl, alkenyl, alkynyl, benzyl, and phenethyl;

or

wherein Y² is selected from the group consisting of alkyl; cycloalkyl; bicycloalkyl; aryl; monocyclic heterocycles; alkyl optionally substituted with aryl which can also be optionally substituted with one or more substituent selected from halo, haloalkyl, alkyl, nitro, hydroxy, alkoxy, aryloxy, aryl, or fused aryl; aryl optionally substituted

with one r more substitu nt s l cted fr m hal, haloalkyl, hydroxy, alkoxy, aryloxy, aryl, fus d aryl, nitro, methylenedi xy, ethylenedioxy, r alkyl; alkynyl; alk nyl; -S-R⁹ and -O-R⁹ wherein R⁹ is selected from the group consisting of H; alkyl; aralkyl; aryl; alkenyl; and alkynyl; or R⁹ taken together with R⁷ forms a 4-12 membered mononitrogen and monosulfur or monooxygen containing heterocyclic ring optionally substituted with lower alkyl, hydroxy, keto, phenyl, carboxyl or carboxyl ester, and fused phenyl; or R⁹ taken together with R⁷ is thiazole; oxazole; benzoxazole; or benzothiazole; and

R⁵ and R⁷ are as defined above:

or Y² (when Y² is carbon) taken together with R⁷ forms a 4-12 membered mononitrogen containing ring optionally substituted with alkyl, aryl or hydroxy;

or A is

where R² and R⁷ taken together form a 5-8 membered dinitrogen containing heterocycle optionally substituted with one or more substituent selected from the group consisting of lower alkyl, hydroxy, keto, phenyl, or carboxyl derivatives; and R⁸ is selected from the group consisting of alkylcarbonyl, arylcarbonyl, alkoxycarbonyl, aryloxycarbonyl, haloalkylcarbonyl, haloalkylcarbonyl, haloalkoxycarbonyl, alkylthiocarbonyl, arylthiocarbonyl, r acyloxymeth xycarbonyl; and

R' is defined as above

or A is

where R^2 and R^7 taken together form a 5-8 membered dinitrogen containing heterocycle optionally substituted with hydroxy, keto, phenyl, or alkyl; and

R⁸ are both selected from the group consisting of alkylcarbonyl, arylcarbonyl, alkoxycarbonyl, aryloxycarbonyl, haloalkylcarbonyl, haloalkoxycarbonyl, alkylthiccarbonyl, arylthiccarbonyl and acyloxymethoxycarbonyl;

Z¹ is one or more substituent selected from the group consisting of H; alkyl; hydroxy; alkoxy; aryloxy; halogen; haloalkyl; haloalkoxy; nitro; amino; alkylamino; acylamino; dialkylamino; cyano; alkylthio; alkylsulfonyl; carboxyl derivatives; trihaloacetamide; acetamide; aryl; fused aryl; cycloalkyl; thio; monocyclic heterocycles; fused monocyclic heterocycles; and A, wherein A is defined above;

V is selected from the group consisting of -N-(R⁶)-wherein R⁶ is selected from the group consisting of H; lower alkyl; cycloalkyl; aralkyl; aryl; and monocyclic heterocycles; or R⁶ taken together with Y, forms a 4-12 membered mononitrogen containing ring;

Y, Y³, Z and Z³ are independ ntly sel cted from the group consisting of hydrogen; alkyl; aryl; and cycloalkyl; or Y and Z taken togeth r form a cycloalkyl; r Y³ and Z³ taken together form a cycloalkyl;

n is an integer 1, 2, or 3;

t is an integer 0, 1, or 2;

p is an integer 0, 1, 2, or 3;

R is X-R³ wherein X is selected from the group consisting of O, S and NR⁴, wherein R³ and R⁴ are independently selected from the group consisting of hydrogen; alkyl; alkenyl; alkynyl; haloalkyl; aryl; arylalkyl; sugars; steroids; polyalkylethers; alkylamido; alkyl N,N-dialkylamido; pivaloyloxymethyl; and in the case of the free acid, all pharmaceutically acceptable salts thereof;

R¹ is selected from the group consisting of hydrogen; alkyl; alkenyl; alkynyl; aryl; carboxyl derivatives; haloalkyl; monocyclic heterocycles; monocyclic heterocycles optionally substituted with alkyl, halogen, haloalkyl, cyano, hydroxy, aryl, fused aryl, nitro, alkoxy, aryloxy, alkylsulfonyl, arylsulfonyl, sulfonamide, thio, alkylthio, carboxyl derivatives, amino, amido;

alkyl optionally substituted with one or more of halo, haloalkyl, hydroxy, alkoxy, aryloxy, thio, alkylthio, alkynyl, alkenyl, alkyl, arylthio, alkylsulfoxide, alkylsulfoxyl, arylsulfoxide, arylsulfoxyl, cyano, nitro, amino, alkylamino, dialkylamin, alkylsulfonamide, arylsulfonamide,

acylamide, carboxyl derivatives, sulfonamide, sulfonic acid, ph sph nic acid derivatives, ph sphinic acid derivativ s, aryl, arylthio, arylsulfoxid, r arylsulfone all opti nally substituted on the aryl ring with halo, alkyl, haloalkyl, cyano, nitro, hydroxy, carboxyl derivatives, alkoxy, aryloxy, amino, alkylamino, dialkylamino, amido, aryl, fused aryl, monocyclic heterocycles; and fused monocyclic heterocycles, monocyclic heterocyclicthio, monocyclic heterocyclicsulfoxide, and monocyclic heterocyclic sulfone, which can be optionally substituted with halo, haloalkyl, nitro, hydroxy, alkoxy, fused aryl, or alkyl;

alkylcarbonyl, haloalkylcarbonyl, and arylcarbonyl;

aryl optionally substituted in one or more positions with halo, haloalkyl, alkyl, alkoxy, aryloxy, methylenedioxy, ethylenedioxy, alkylthio, haloalkylthio, thio, hydroxy, cyano, nitro, acyloxy, carboxyl derivatives, carboxyalkoxy, amido, acylamino, amino, alkylamino, dialkylamino, trifluoroalkoxy, trifluoromethylsulfonyl, alkylsulfonyl, sulfonic acid, sulfonamide, aryl, fused aryl, monocyclic heterocycles and fused monocyclic heterocycles; and

C wherein R^7 and R^8 are as defined above

and provided that taken together with the nitrogen, R^7 and R^8 comprise an amino acid;

and

R^{II} is selected from the group consisting f H, alkyl, aralkyl, alkenyl, alkynyl, haloalkyl r haloalkynyl or R^{II} taken tog ther with Y forms a 4-12 membered mon nitrogen c ntaining ring.

2. A compound according to the formula of Claim 1 wherein

A is

wherein Y^1 is selected from the group consisting of N-R², O, and S;

R² is selected from the group consisting of H, cyano, alkyl, aryl, substituted alkyl, hydroxy, alkoxy, alkylcarbonyl, amido, nitro, amino and monocyclic heterocycles, arylcarbonyl, alkoxycarbonyl, aryloxycarbonyl, haloalkoxycarbonyl, alkylthiocarbonyl, arylthiocarbonyl, acyloxymethoxycarbonyl; or R² taken together with R⁷ forms a 4-12 membered ring;

R⁵, R⁷, R⁸ are independently selected from the group consisting of H, alkyl, alkenyl, alkynyl, cycloalkyl, bicycloalkyl substituted alkyl, arylalkyl, aryloxy, hydroxy, alkoxy, amino, alkylamino, arylamino, amido, alkylcarbonyl, arylcarbonyl, alkoxycarbonyl, aryloxycarbonyl, haloalkylcarbonyl, haloalkoxycarbonyl, alkylthiocarbonyl, arylthiocarbonyl, acyloxymethoxycarbonyl, substituted phenyl,

arylacyl, monocyclic and bicyclic heterocycles, monocyclic and bicyclic heter cyclicalkyl and - SO_2R^{10} wherein R^{10} is select d from the gr up consisting of alkyl, amino and aryl which are all optionally substituted with one or more substituent selected from the group consisting of acylamino, amino, carbonyl, cyano, nitro, alkoxy, halo, alkyl, trifluoroalkyl, amido, alkylaminosulfonyl, alkylsulfonyl, alkylsulfonylamino, alkylamino, dialkylamino, aryloxy, thio, trifluoromethylthio. trifluoroalkoxy, and trifluoromethylsulfonyl or -NR7 and R6 taken together form a 4-12 membered ring wherein said ring optionally contains a heteroatom selected from the group consisting of O, N, and S wherein said ring is optionally substituted;

3. A compound according to Claim 2 wherein

V is $-N(R^6)$ - wherein R^6 is selected from the group consisting of H and lower alkyl;

n is 1;

t is 0 or 1;

p is 0, 1 or 2; and

R is 0-R3.

- 4. A compound according to Claim 3 selected from the group consisting of
 - (±) ethyl β -[[2-[[[3-[(aminoiminomethyl) amino]phenyl]-carbonyl]amino]acetyl]amino]pyridine-3-propanoate;

- (±)β-[[2-[[[3-[(aminoimin methyl)amino]phenyl]carbonyl]amino]ac tyl]amino]pyridine-3pr pan ic acid;
- (±)ethyl β -[[2-[[[3-[(aminoiminomethyl)amino]phenyl]-carbonyl]amino]acetyl]amino]benzenepropanoate;

(±)β-[[2-[[[3-

[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid;

- (±) ethyl β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]-1,3benzodioxole-5-propanoate;
- (±)β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]-1,3benzodioxole-5-propanoic acid;
- (±)ethyl β-[[2-[[[3-[(aminoiminomethyl)amino]naphthalen-1-yl]carbonyl]amino]acetyl]amino]pyridine-3-propanoate;
 - (±)β-[[2-[[[3-[(aminoiminomethyl)-amino]naphthalen-1-yl]carbonyl]amino]acetyl]amino]pyridine-3-propanoic acid;
- (±) ethyl β-[[1-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]-1-cyclopropyl]carbonyl]amino]pyridine-3-propanoate;
- (±) β-[[1-[[[3[(aminoiminomethyl)amino]phenyl]carbonyl]amino]cycloprop-1-yl]carbonyl]amino]pyridine-3-propanoic acid;

- (±) ethyl β-[[2-[[[3-[[imino[(phenylmethyl)amin]methyl]amino]phenyl]carbonyl]amin]acetyl]amino]pyridine-3-pr panoate;
- - β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]-3,5dichlorobenzenepropanoic acid;
 - 3S-[[2-[[[3-(aminocarbonylamino)phenyl]-carbonyl]amino]acetyl]amino]-4-pentynoic acid;
 - ethyl 3S-[[2-[[[3-(aminocarbonylamino)phenyl]carbonyl]amino]acetyl]amino]-4-pentynoate;
 - βS-[[2-[[[3-[(aminoiminomethyl)amino]-2,5,6trifluorophenyl]carbonyl]amino]acetyl]amino]-4-pentynoic acid;
 - (±) β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]-3,5bis(trifluoromethyl)benzenepropanoic acid;
 - (±) β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]-3,5bis(trifluoromethyl)benzenepropanoic acid;
 - ethyl (±) β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]-3,5bis(trifluoromethyl)benzenepropanoate;
 - (±) β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino][1,1'-biphenyl]-4-propanoic acid;

- ethyl (±) β-[[2-[[[3-[(aminoiminomethyl)amin]phenyl]carb nyl]amino]acetyl]amin][1,1'-biphenyl]-4-propanoate;
- (±) ethyl β-[[2-[[[3-[(aminoiminomethyl)amino]-5(trifluoromethyl)-phenyl]carbonyl]amino]acetyl]amino]3,5-bis(trifluoromethyl)benzenepropanoate;
- (±) β -[[2-[[[3-[(aminoiminomethyl)amino]-5-(trifluoromethyl)phenyl]carbonyl]amino]acetyl]amino]-3,5-bis(trifluoromethyl)benzenepropanoic acid;
 - (±) β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]naphthalene-1-carboxylic acid;
 - methyl (±) β -[[2-[[[3-[(aminoiminomethyl)-amino]phenyl]carbonyl]amino]acetyl]amino]naphthalene-1-carboxylate;
 - (±) 3-[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]-2-oxopyrrolidine-1propanoic acid;
 - 3R-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]-4-pentynoic acid;
- - 3S-[[2-[[[3-[[[(phenylmethyl)amino]carbonyl]amino]phenyl]carbonyl]amino]acetyl]amino]-4-pentynoic acid;

3S-[[2-[[[3-[(aminoimin methyl)amino]phenyl]-carb nyl]amino]acetyl]amin]-4-pentynoic acid;

β-[[2-[[[3-(aminocarbonylamin)phenyl]-carbonyl]amino]acetyl]amino]pyridine-3-propanoic acid;

ethyl β -[[2-[[[3-(aminocarbonylamino)phenyl]-carbonyl]amino]acetyl]amino]pyridine-3-propanoate;

- - (±)ethyl β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]furan-2-propanoate;
 - (±) β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]furan-3-propanoic acid;
- 3-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]pentanedioic acid;
- bismethyl ester 3-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]-amino]acetyl]amino]pentanedioate;

- (±) β-[[2-[[[3-[(amin imin methyl)amino]phenyl]carbonyl]amino]acetyl]amino]furan-2-pr panoic acid;
- ethyl (±) β -[[2-[[[3-[(aminoiminomethyl)amino]phenyl]-carbonyl]amino]acetyl]amino]furan-2-propanoate;
 - (±) β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]naphthalene-2-propanoic acid;
 - - - (±) β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]thiophene-3-propanoic acid;
 - (±) 2-[3-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]-4carboxybutyl]thio]benzoic acid;
 - (±) 2-[3-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]-4carboxybutyl]sulfonyl]benzoic acid;
 - (±) β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]thiophene-2-propanoic acid;

- - (±) methyl 3-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]5-[(4-methylphenyl)thio]pentanoate;
 - (±) methyl 3-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]4-[[(4-methylphenyl)sulfonyl]amino]butanoate;
 - 3-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]-4-[[(4methylphenyl)sulfonyl]amino]butanoic acid;
 - (±) 3-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]-5-[(4methylphenyl)thio]pentanoic acid;
 - (±) 3-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]-5-[(4methylphenyl)sulfonyl]pentanoic acid;

2-[[2S-[[2-[[[3-[(aminoiminomethy1)-amino]phenyl]carbonyl]amino]acetyl]amin]-2-(carboxymethyl)ethyl]sulfonyl]benzoic acid;

3S-[[2-[[[3-[(aminoiminomethyl)amino]-phenyl]carbonyl]amino]acetyl]amino]-4-pentynoic acid;

2-[[2S-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]-2(carboxymethyl)ethyl]thio]benzoic acid;

(±) ethyl β -[[2-[[[3-[(aminoiminomethyl)-amino]phenyl]carbonyl]methylamino]acetyl]-amino]-pyridine-3-propanoate;

- (±)β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]methylamino]acetyl]amino]pyridine3-propanoic acid;
 - (±)ethyl β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]-1-oxopropyl]amino]pyridine-3-propanoate;
 - (±)β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]-1-oxopropyl]amino]pyridine-3-propanoic acid;
 - (±) β-[[2-[[[3-[(aminoiminomethyl)amino]-4methylphenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoic acid;

- (±) β-[[2-[[[3-[[(aminoiminom thyl)amin]methyl]phenyl]carbonyl]amin]acetyl]amino]pyridine-3-propan ic acid;

 - (±) β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]-2-hydroxybenzenepropanoic acid;
- (±) β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]-2hydroxy-5-methylbenzenepropanoic acid;
- (±) 3-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]-4-[(2hydroxyethyl)amino]-4-oxobutanoic acid;

- N-[2-[[[3-[(aminoiminomethyl)amino]phenyl]-carbonyl]amino]acetyl]- β -alanine, ethyl ester;
 - N-[2-[[[3-[(aminoiminomethyl)amino]-phenyl]carbonyl]amino]acetyl]- β -alanine;

- (±)ethyl β-[[2-[[[3-[(aminoiminom thyl)amin]phenyl]carbonyl]amin]acetyl]amino]quin line-3-propanoate;
 - β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]quinoline-3-propanoic acid;
- (±)ethyl β-[[2-[[[3-[[[(phenylmethyl)amino]carbonyl]amino]phenyl]carbonyl]amino]
 acetyl]amino]pyridine-3-propanoate;

 - ethyl β-[[2-[[[3-[[[(3,5-dichlorophenyl)methyl] amino]carbonyl]amino]phenyl]carbonyl]amino] acetyl]amino]pyridine-3-propanoate;
 - 3-[[2-[[[3-[[[(3,5-dichlorophenyl)methyl] amino]carbonyl]amino]phenyl]carbonyl] amino]acetyl]amino]butanoic acid;

β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]-carbonyl]amino]acetyl]amino]-3,5-bis(1-m thyleth xy)benzenepropan ic acid;

ethyl β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]-carbonyl]amino]acetyl]amino]-3,5-bis(1-methyl-ethoxy)benzenepropanoate;

β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]-carbonyl]amino]acetyl]amino]-3,5-dibromo-4-hydroxybenzenepropanoic acid;

ethyl β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]-3,5-dibromo-4hydroxybenzenepropanoate;

β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]-carbonyl]amino]acetyl]amino]-3,5-dichloro-4-hydroxybenzenepropanoic acid;

β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]-carbonyl]amino]acetyl]amino]-3,5-dichloro-4-hydroxybenzenepropanoate;

β-[[2-[[[5-[(aminoiminomethyl)amino]-2-hydroxyphenyl]carbonyl]amino]acetyl]amino]-3,5-dichlorobenzenepropanoic acid;

ethyl β -[[2-[[5-[(aminoiminomethyl)amino]-2-hydroxyphenyl]carbonyl]amino]acetyl]amino]3,5-dichlorobenzenepropanoate;

β-[[2-[[[3-[[(phenoxyamino)carbonyl]amino]phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoic acid;

- - β-[[2-[[[3-[[[(phenylamino)amino]carbonyl]amino]phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoic acid;
- - β-[[2-[[[3-[(aminoiminomethyl)amino]-5-carboxy-phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoic acid;
- - β-[[2-[[[3-[(aminoiminomethyl)amino]-5-carboxyphenyl]carbonyl]amino]acetyl]amino]-3,5dichlorobenzenepropanoic acid;
- ethyl β -[[2-[[[3-[(aminoiminomethyl)amino]-5-carboxy-phenyl]carbonyl]amino]acetyl]amino]-3,5-dichlorobenzenepropanoate;

β-[[2-[[[3,5-bis[(aminoiminomethyl)amino]phenyl]-carbonyl]amin]acetyl]amino]-3,5-dichl robenzenepropanoic acid;

ethyl β-[[2-[[[3,5-bis[(aminoiminomethyl)amino]-phenyl]carbonyl]amino]acetyl]amino]-3,5-dichloro-benzenepropanoate;

β-[[2-[[[3-[(aminoiminomethyl)amino]-5-(trifluoroacetyl)amino]phenyl]carbonyl]amino]acetyl]amino]-3,5-dichlorobenzenepropanoic acid;

ethyl \$\beta^{[2-[[[3-[(aminoiminomethyl)amino]-5-(trifluoroacetyl)amino]phenyl]carbonyl]amino]acetyl]amino]-3,5-dichlorobenzenepropanoate;

β-[[2-[[[3-(acetylamino)-5-[(aminoiminomethyl)-amino]phenyl]carbonyl]amino]acetyl]amino]3,5-dichlorobenzenepropanoic acid;

(±) 3,5-dichloro-β-[[2-[[[3[[(methylamino) (methylimino) methyl]amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid;

(±) 3,5-dichloro-β-[[2-[[[3[[(ethylamino) (methylimino) methyl]amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid;

- (±) 3,5-dichloro-β-[[2-[[[3-[[[(1methylethyl)amin](m thylimino)methyl]amin]phenyl]carbonyl]amino]acetyl]amino]benzenepropan ic acid;
 - (±) β-[[2-[[[3-[[(ethylamino)(methylimino)methyl]amino]phenyl]carbonyl]amino]acetyl]amino]-4-fluorobenzenepropanoic acid;
- (±) 4-fluoro-β-[[2-[[[3-[[(4pyridinylmethyl)amino](methylimino)methyl]amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid;
- β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]-4fluorobenzenepropanoic acid;
 - (±) β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]lH-imidazole-2-propanoic acid;
- (±) β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]-2,3,4,6tetrafluorobenzenepropanoic acid;
 - β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]-5-bromothiophene-2-propanoic acid;
 - β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]-2mercaptobenzenepropanoic acid;

- (±) β-[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amin]-5chl r -2-mercaptobenzenepropanoic acid.
- 5. A compound according to Claim 3 wherein Y^1 is $N-R^2$ and R^2 is cyano.
- 6. A compound according to Claim 5 wherein the compound is selected from the group consisting of

phenylmethyl β -[[2-[[[3-[[(cyanoimino)-phenylmethylamino)methyl]amino]phenyl]carbonyl]amino]-acetyl]amino]benzenepropanoate;

phenylmethyl β-[[2-[[[3-[[(cyanoimino)methylamino)methyl]amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoate;

phenylmethyl β-[[2-[[[3-[[(cyanoimino)(amino)methyl]amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoate;

β-[[2-[[[3-[[(cyanoimino)(ethylamino)methyl]amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoate;

β-[[2-[[[3-[[(cyanoimino)[(phenylmethyl)amino]methyl]amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid;

β-[[2-[[[3-[[(cyanoimino) (methylamino) methyl]amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid;

β-[[2-[[[3-[[amino(cyanoimino)methyl]amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid;

```
β-[[2-[[[3-[[(cyanoimino) (ethylamino) -
methyl]amin ]phenyl]carbonyl]amino]ac tyl]-
amino]benz nepropan ic acid;
```

ethyl 3S-[[2-[[[3-[[(cyanoimino)(methylamino)methyl]amino]phenyl]carbonyl]amino]acetyl]amino]-4-pentynoate;

3S-{[2-[[[3-[[(cyanoimino) (methylamino) methyl]amino]phenyl]carbonyl]amino]acetyl]amino]-4-pentynoic acid;

ethyl β -[[2-[[[3-[[(cyanoimino)[2-pyridinylmethyl)-amino]methyl]amino]phenyl]carbonyl]amino]-acetyl]amino]benzenepropanoate;

β-[[2-[[[3-[[(cyanoimino)[2-pyridinylmethyl)-amino]methyl]amino]phenyl]carbonyl]amino]-acetyl]amino]benzenepropanoic acid;

ethyl \(\beta^-\)[(3-\)[(cyanoimino)(3-\)
pyridinylmethyl)amino]methyl]amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoate;

β-[[2-[[[3-[[(cyanoimino)[3-pyridinylmethyl)amino]methyl]amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid;

ethyl 3S-[[2-[[[3-[[[(4-(aminosulfonyl) phenylmethyl]amino](cyanoimino)methyl] amino]phenyl]carbonyl]amino]acetyl] amino]-4-pentynoate;

3S-[[2-[[[3-[[[(4-(aminosulfonyl)phenylmethyl]amino](cyanoimino)methyl]amino]phenyl]carbonyl]amino]acetyl]amino]-4-pentynoic acid;

ethyl β-[[2-[[[3-[[amino(cyanoimino)methyl]amin] phenyl]carbonyl]amino]acetyl]amin]-3,5 dichlorobenzenepropanoate;

β-[[2-[[[3-[[amino(cyanoimino)methyl]amino]phenyl]carbonyl]amino]acetyl]amino]-3,5dichlorobenzenepropanoic acid;

and

ethyl 3-[[2-[[[3-[[amino(cyanoimino)methyl]amino]-phenyl]carbonyl]amino]acetyl]amino]-4-pentynoate.

7. A compound according to Claim 2 wherein

A is

wherein Y¹ is N-R²; R² taken together with R⁷ forms a 4-12 membered ring; and R³ and R³ are independently selected from the group consisting of H, alkyl, alkenyl, alkynyl, cycloalkyl, bicycloalkyl substituted alkyl, arylalkyl, aryloxy, hydroxy, alkoxy, amino, alkylamino, arylamino, amido, alkylcarbonyl, arylcarbonyl, alkoxycarbonyl, aryloxycarbonyl, hal alkylcarbonyl, hal alk xycarbonyl,

alkylthiocarb nyl, arylthi carbonyl, acyloxymethoxycarb nyl, substituted phenyl, arylacyl, monocyclic and bicyclic heterocycles, monocyclic and bicyclic heterocyclicalkyl and -SO,R10 wherein R10 is selected from the group consisting of alkyl, amino and aryl which are all optionally substituted with one or more substituent selected from the group consisting of acylamino, amino, carbonyl cyano, nitro, alkoxy, halo, alkyl, trifluoroalkyl, amido, alkylaminosulfonyl, alkylsulfonyl, alkylsulfonylamino, alkylamino, dialkylamino. aryloxy, thio, trifluoromethylthio, trifluoroalkoxy, and trifluoromethylsulfonyl or -NR7 and R4 taken together form a 4-12 membered ring wherein said ring optionally contains a heteroatom selected from the group consisting of O, N, and S wherein said ring is optionally substituted.

8. A compound according to Claim 7 wherein

V is $-N(R^6)$ - wherein R^6 is selected from the group consisting of H and lower alkyl;

n is 1;

t is 0; and

p is 1.

- 9. A compound acc rding to Claim 8 select d from the group consisting f
 - (±) ethyl β-[[2-[[[3-[(4,5-dihydro-1H-imidazol-2-yl) amino]phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoate;
 - (±)β-[[2-[[[3-[(4,5-dihydro-1H-imidazol-2-yl)amino]phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoic acid;
 - (±) ethyl β-[[2-[[[3-[(4,5-dihydro-1H-imidazol-2-yl)amino]phenyl]carbonyl]amino]acetyl]amino]--3,5-bis(trifluoromethyl)benzenepropanoate;
 - (±) β -[[2-[[{3-[(4,5-dihydro-1H-imidazol-2-yl)-amino]phenyl]carbonyl]amino]acetyl]amino]-3,5-bis(trifluoromethyl)benzenepropanoic acid;
 - (±) ethyl β-[[2-[[[3-[(4,5-dihydro-1H-imidazol-2-yl)amino]phenyl]carbonyl]amino]acetyl]amino]-3,5-dichlorobenzenepropanoate;
 - (±) β-[[2-[[[3-[(4,5-dihydro-1H-imidazol-2-yl)amino]phenyl]carbonyl]amino]acetyl]amino]3,5-dichlorobenzenepropanoic acid;
 - (±) ethyl 3,5-dichloro-β-[[2-[[[3-[(1,4,5,6tetrahydropyrimidin-2-yl)amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoate;

- (±) 3,5-dibrom -β-[[2-[[[3-[(1,4,5,6tetrahydropyrimidin-2-yl)amino]phenyl]carbonyl]amin]acetyl]amino]b nzen propanoic acid;
- (±) [2-[2-(2-hydroxyethoxy)ethoxy]ethoxy]ethyl] 3,5-dichloro-β-[[2-[[[3[(1,4,5,6-tetrahydropyrimidin-2-yl)amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoate;
 - (±) [2-[2-(2-hydroxyethoxy) ethoxy]ethoxy]ethyl] 3,5-dichloro-β-[[2-[[[3[(1,4,5,6-tetrahydropyrimidin-2-yl)amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoate;
 - (±) 3-bromo-5-chloro-2-hydroxy-β[[2-[[[3-[(1,4,5,6-tetrahydropyrimidin-2-yl)amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid;
 - ethyl (±) 3-bromo-5-chloro-2-hydroxy-β[[2-[[[3-[(1,4,5,6-tetrahydropyrimidin-2-yl)amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoate;
 - (±) 3,5-dichloro-2-hydroxy-β-[[2[[[3-[(1,4,5,6-tetrahydropyrimidin-2-y1)amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid;

- (±) 3,5-dichloro-β-[[2-[[[3-[(4,5-dihydro-1H-pyrrolidin-2-yl)amino]phenyl]carbonyl]amino]amino]ac tyl]amino]-2-hydroxybenzenepropanoic acid;
 - (±) 3-bromo-5-chloro-β-[[2-[[[3-[(4,5-dihydro-1H-pyrrolidin-2-yl)amino]phenyl]carbonyl]amino]acetyl]amino]-2-hydroxybenzenepropanoic acid;
 - β-[[2-[[[3-[[5-phenyl-1H-imidazol-2-y1)amino]phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoic acid;
 - ethyl β-[[2-[[[3-[[5-phenyl-1H-imidazol-2-yl) amino]phenyl]carbonyl]amino]acetyl]amino] pyridine-3-propanoate;
 - (±) ethyl 3,5-dichloro-β-[[2-[[[3[(1,4,5,6-tetrahydro-5,5-dimethylpyrimidin-2-yl)amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoate;
- (±) 3,5-dichloro-β-[[2-[[[3-[(1,4,5,6-tetrahydro-5,5-dimethylpyrimidin-2-yl)amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid;

(±) 3-bromo-5-dichloro-2-hydroxyβ-[[2-[[[3-[(1,4,5,6-tetrahydro-5,5-dimethylpyrimidin-2-yl)amin]phenyl]carb nyl]amin]ac tyl]amino]benzenepropanoic acid;

and

ethyl(±) 3-bromo-5-dichloro-2-hydroxy-β-[[2-[[[3-[(1,4,5,6-tetrahydro-5,5-dimethylpyrimidin-2yl)amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoate.

10. A compound according to the formula of Claim 1 wherein

wherein Y² is selected from the group consisting of lower alkyl, substituted alkyl, phenyl, substituted phenyl, cycloalkyl, monocyclic heterocycles, -S-R⁹ and -O-R⁹ wherein R⁹ is selected from the group consisting of H, alkyl, substituted alkyl, phenyl, substituted phenyl and monocyclic heterocycles or R⁹ taken together with R⁷ forms a 4-12 membered ring; or

 Y^2 taken together with R^7 forms a 4-12 membered ring which is optionally substituted.

11. A compound according to Claim 10 wherein

 Y^2 taken together with R^7 forms a 4-12 member d ring which is optionally substituted.

12. A compound according to Claim 11 wherein

V is $-N(R^6)$ - wherein R^6 is selected from the group consisting of H and lower alkyl;

n is 1;

t is 0 or 1; and

p is 1.

- 13. A compound according to Claim 12 wherein the compound is selected from the group consisting of
 - (±) ethyl β-[[2-[[[3-[(3,4,5,6-tetrahydro-2H-azepin-7-yl)amino]phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoate;
 - (±) β-[[2-[[[3-[(3,4,5,6-tetrahydro-2H-azepin-7-yl)amino]phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoic acid;
 - (±)ethyl β-[[2-[[[3-[(3,4,5,6-tetrahydro-2H-azepin-7-yl)amino]phenyl]carbonyl]amino]acetyl]amino]1,3-benzodioxole-5-propanoate;

- (±) β-[[2-[[[3-[(3,4,5,6-tetrahydro-2H-azepin-7yl)amino]phenyl]carbonyl]amin]acetyl]amino]benzenepr pan ic acid;
- (±) ethyl β-[[2-[[[3-[(3,4-dihydro-2H-pyrrol-5-yl)amino]phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoate;
- β-[[2-[[[3-[(3,4-dihydro-2H-pyrrol-5-y1)amino]-phenyl]carbonyl]amino]acetyl]amino]-pyridine-3-propanoic acid;
- (±)ethyl β-[[2-[[[4-chloro-3-[(3,4,5,6-tetrahydro-2H-azepin-7-yl)amino]phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoate;
 - (±) β-[[2-[[[4-chloro-3-[(3,4,5,6-tetrahydro-2H-azepin-7-yl)amino]phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoic acid;
- (±) β-[[2-[[[3,5-bis[(3,4,5,6-tetrahydro-2H-azepin-7-yl)amino]phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoic acid;
 - βS-[[2-[[[3-[(3,4,5,6-tetrahydro-2H-azepin-7-yl)amino]phenyl]carbonyl]amino]acetyl]amino]-4-pentynoic acid;
- (±) ethyl β-[[2-[[[3-[(3,4,5,6-tetrahydro-2H-azepin-7-yl)amino]phenyl]carbonyl]amino]acetyl]amino]-3,5-dichlorobenzenepropanoate;
 - (±) β-[[2-[[[3-[(3,4,5,6-tetrahydro-2H-azepin--7-yl)amino]phenyl]carbonyl]amino]acetyl]amino]-3,5-dichlorobenzenepropanoic acid;

- (±) ethyl β-[[2-[[[3-[(3,4-dihydro-2H-pyrrol-5-yl)amin]phenyl]carbonyl]amino]ac tyl]amino]-3,5-dichlorobenzenepropanoate;
- (±) β-[[2-[[[3-[(3,4-dihydro-2H-pyrrol-5-yl)amino]phenyl]carbonyl]amino]acetyl]amino]3,5-dichlorobenzenepropanoic acid;
- (±) ethyl 3,5-dichloro-β-[[2-[[[3[(2,3,4,5-tetrahydropyridin-6-yl)amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoate;
- (±) 3,5-dichloro-β-[[2-[[[3-[(2,3,4,5tetrahydropyridin-6-yl)amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid;
 - (±) 3,5-dichloro-2-hydroxy-β-[[2[[[3-[(3,4,5,6-tetrahydro-2H-azepin-7-yl)amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid;

and

- ethyl(±) 3,5-dichloro-2-hydroxy-β-[[2-[[[3-[(3,4,5,6-tetrahydro-2H-azepin-7-yl)amino]phenyl]carbonyl]amino]acetyl)amino]benzenepropanoate.
- 14. A compound according to Claim 10 wherein
 - Y² is selected from the group consisting of lower alkyl, substituted alkyl, phenyl, substituted phenyl, cycloalkyl and monocyclic heterocycles.

15. A compound according to Claim 14 wherein

V is $-N(R^6)$ - wherein R^6 is selected from the gr up consisting of H and 1 wer alkyl;

- n is 1;
- t is 0; and
- p is 1.
- 16. A compound according to Claim 15 wherein the compound is selected from the group consisting of
 - (±) ethyl β-[[2-[[[3-[(iminophenylmethyl)amino]phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoate;
 - βS-[[2-[[[3-[[imino(1-pyrrolidinyl)methyl]amino]phenyl]carbonyl]amino]acetyl]amino]-4-pentynoic acid;
 - (±) β-[[2-[[[3-[(iminophenylmethyl]amino]phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoic acid;
 - 3,5-dichloro-β-[[2-[[[3-[[imino(1piperidinyl)methyl]amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid;

and

ethyl 3,5-dichloro-β-[[2-[[[3-[[imino(1-piperidinyl)methyl]amino]phenyl]carbonyl]-amino]acetyl]amino]benzenepropanoate.

ť

- 17. A c mpound acc rding to Claim 10 wherein Y² is
 -S-R⁹ r -O-R⁹ wh rein R⁹ is selected fr m the group
 c nsisting f H, alkyl, substituted alkyl, phenyl,
 substituted phenyl and monocyclic hereocycles or R⁹
 taken together with R⁷ forms a 4-12 membered ring.
- 18. A compound according to Claim 17 wherein

V is -N(R⁶) - wherein R⁶ is selected from the group consisting of H, lower alkyl, substituted alkyl, cycloalkyl, aryl, substituted aryl, monocyclic heterocycles and benzyl;

n is 0;

t is 0; and

p is 1 or 2.

19. A compound according to Claim 18 wherein the compound is selected from the group consisting of

ethyl β-[[2-[[[3-[(4,5-dihydrothiazol-2yl)amino]phenyl]carbonyl]amino]acetyl] amino]pyridine-3-propanoate;

β-[[2-[[[3-[(4,5-dihydrothiazol-2-yl)amino]-phenyl]carbonyl]amino]acetyl]amino]-pyridine-3-propanoic acid;

β-[[2-[[[3-[[benzoxazol-2-yl)amino]-phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoic acid;

ethyl β-{[2-{[[3-{[benzoxazol-2-yl)amino] phenyl]carbonyl]amino]acetyl]amino] pyridine-3-propanoate.

β-[[2-[[[3-[(5,6-dihydro-4H-thiazin-2-yl)-amin]phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propan ic acid;

and

ethyl β -[[2-[[[3-[(5,6-dihydro-4H-thiazin-2-yl)-amino]phenyl]carbonyl]amino]acetyl]amino]-pyridine-3-propanoate.

20. A compound according to Claim 1 of the formula

3

:

21. A pharmaceutical composition comprising a therapeutically effective amount of a compound of the formula

$$A = \begin{pmatrix} Y^3 \\ C \\ Z^3 \end{pmatrix}_{1} \begin{pmatrix} Y \\ Z^1 \end{pmatrix} \begin{pmatrix} Y \\ C \\ Z^1 \end{pmatrix}_{R^{11}} \begin{pmatrix} (CH_2)_p - C - R \\ R^1 \end{pmatrix}$$

or a pharmaceutically acceptable salt thereof, wherein

A is

wherein Y^{1} is selected from the group consisting of N-R², O, and S;

 R^2 is select d from the group c nsisting of H; alkyl; aryl; hydroxy; alk xy; cyan; nitro; amino; alkenyl; alkynyl; amido; alkylcarbonyl; arylcarbonyl; alkoxycarb nyl; aryl xycarbonyl; haloalkylcarbonyl; haloalkoxycarbonyl; alkylthiocarbonyl; arylthiocarbonyl; acyloxymethoxycarbonyl; alkyl optionally substituted with one or more substituent selected from lower alkyl, halogen, hydroxyl, haloalkyl, cyano, nitro, carboxyl, amino, alkoxy, aryl or aryl optionally substituted with one or more halogen, haloalkyl, lower alkyl, alkoxy, cyano, alkylsulfonyl, alkylthio, nitro, carboxyl, amino, hydroxyl, sulfonic acid, sulfonamide, aryl, fused aryl, monocyclic heterocycles, or fused monocyclic heterocycles; aryl optionally substituted with one or more substituent selected from halogen, haloalkyl, hydroxy, lower alkyl, alkoxy, methylenedioxy, ethylenedioxy, cyano, nitro, alkylthio, alkylsulfonyl, sulfonic acid, sulfonamide, carboxyl derivatives, amino, aryl, fused aryl, monocyclic heterocycles and fused monocyclic heterocycle; monocyclic heterocycles; and monocyclic heterocycles optionally substituted with one or more substituent selected from halogen, haloalkyl, lower alkyl, alkoxy, amino, nitro, hydroxy, carboxyl derivatives, cyano, alkylthio, alkylsulfonyl, sulfonic acid, sulfonamide, aryl or fused aryl; or

R² taken together with R⁷ forms a 4-12 membered dinitrogen containing heterocycle optionally substituted with one or more substituent selected from the group consisting of lower alkyl, hydroxy, keto, alkoxy, halo, phenyl, amino, carboxyl or carboxyl ester, and fused phenyl;

- or R² taken together with R⁷ f rms a 5 membered h ter aromatic ring opti nally substituted with one or more substituent selected from lower alkyl, phenyl and hydr xy;
- or R² taken together with R⁷ forms a 5 membered heteroaromatic ring fused with a phenyl group;

R7 (when not taken together with R2) and R8 are independently selected from the group consisting of H; alkyl; alkenyl; alkynyl; aralkyl; amino; alkylamino; hydroxy; alkoxy; arylamino; amido, alkylcarbonyl, arylcarbonyl; alkoxycarbonyl; aryloxycarbonyl; haloalkylcarbonyl; aryloxy; haloalkoxycarbonyl; alkylthiocarbonyl; arylthiocarbonyl; acyloxymethoxycarbonyl; cycloalkyl; bicycloalkyl; aryl; acyl; benzoyl; alkyl optionally substituted with one or more substituent selected from lower alkyl, halogen, hydroxy, haloalkyl, cyano, nitro, carboxyl derivatives, amino, alkoxy, thio, alkylthio, sulfonyl, aryl, aralkyl, aryl optionally substituted with one or more substituent selected from halogen, haloalkyl, lower alkyl, alkoxy, methylenedioxy, ethylenedioxy, alkylthio, haloalkylthio, thio, hydroxy, cyano, nitro, carboxyl derivatives, aryloxy, amido, acylamino, amino, alkylamino, dialkylamino, trifluoroalkoxy, trifluoromethyl, sulfonyl, alkylsulfonyl, haloalkylsulfonyl, sulfonic acid, sulfonamide, aryl, fused aryl, monocyclic heterocycles, fused monocyclic heterocycles; aryl optionally substituted with one or more substituent selected from halogen, haloalkyl, lower alkyl, alkoxy, methylenedioxy, ethylenedioxy, alkylthio, haloalkylthio, thio, hydroxy, cyano, nitro, carboxyl derivatives, aryl xy, amido, acylamino,

amin , alkylamin , dialkylamin , trifluoroalkoxy, trifluoromethylsulfonyl, alkylsulfonyl, sulfonic acid, sulfonamide, aryl, fused aryl, monocyclic heterocycles, or fused monocyclic heter cycles; monocyclic heterocycles; monocyclic heterocycles optionally substituted with one or more substituent selected from halogen, haloalkyl, lower alkyl, alkoxy, aryloxy, amino, nitro, hydroxy, carboxyl derivatives, cyano, alkylthio, alkylsulfonyl, aryl, fused aryl; monocyclic and bicyclic heterocyclicalkyls; $-SO_2R^{10}$ wherein R^{10} is selected from the group consisting of alkyl, aryl and monocyclic heterocycles, all optionally substituted with one or more substituent selected from the group consisting of halogen, haloalkyl, alkyl, alkoxy, cyano, nitro, amino, acylamino, trifluoroalkyl, amido, alkylaminosulfonyl, alkylsulfonyl, alkylsulfonylamino, alkylamino, dialkylamino, trifluoromethylthio, trifluoroalkoxy, trifluoromethylsulfonyl, aryl, aryloxy, thio, alkylthio, and monocyclic heterocycles; and

U wherein R¹⁰ is defined above;
—C—R¹⁰

or NR⁷ and R⁸ taken together form a 4-12 membered mononitrogen containing monocyclic or bicyclic ring optionally substituted with one or more substituent selected from lower alkyl, carboxyl derivatives, aryl or hydroxy and wherein said ring optionally contains a heteroatom selected from the group consisting of O, N and S;

R' is selected from the group consisting of H, alkyl, alkenyl, alkynyl, benzyl, and phenethyl;

or

wherein Y2 is selected from the group consisting of alkyl; cycloalkyl; bicycloalkyl; aryl; monocyclic heterocycles; alkyl optionally substituted with aryl which can also be optionally substituted with one or more substituent selected from halo, haloalkyl, alkyl, nitro, hydroxy, alkoxy, aryloxy, aryl, or fused aryl; aryl optionally substituted with one or more substituent selected from halo, haloalkyl, hydroxy, alkoxy, aryloxy, aryl, fused aryl, nitro, methylenedioxy, ethylenedioxy, or alkyl; alkynyl; alkenyl; -S-R and -O-R wherein R is selected from the group consisting of H; alkyl; aralkyl; aryl; alkenyl; and alkynyl; or R' taken together with R7 forms a 4-12 membered mononitrogen and monosulfur or monooxygen containing heterocyclic ring optionally substituted with lower alkyl, hydroxy, keto, phenyl, carboxyl or carboxyl ester, and fused phenyl; or R9 taken together with R7 is thiazole; oxazole; benzoxazole; or benzothiazole; and

 R^5 and R^7 are as defined above;

or Y² (when Y² is carbon) taken together with R⁷ forms a 4-12 membered mononitrogen containing ring optionally substituted with alkyl, aryl or hydroxy;

or A is

where R² and R⁷ taken together form a 5-8 membered dinitrogen containing heterocycle optionally substituted with one or more substituent selected from the group consisting of lower alkyl, hydroxy, keto, phenyl, or carboxyl derivatives; and R⁸ is selected from the group consisting of alkylcarbonyl, arylcarbonyl, alkoxycarbonyl, aryloxycarbonyl, haloalkylcarbonyl, haloalkylcarbonyl, haloalkoxycarbonyl, alkylthiocarbonyl, arylthiocarbonyl, or acyloxymethoxycarbonyl; and

R' is defined as above

or A is

where R² and R⁷ taken together form a 5-8 membered dinitrogen containing heterocycle optionally substituted with hydroxy, keto, phenyl, or alkyl; and

R¹ are both selected from the group consisting of alkylcarbonyl, arylcarbonyl, alkoxycarbonyl, aryloxycarbonyl, haloalkylcarbonyl, haloalkoxycarbonyl, alkylthiocarbonyl, arylthiocarbonyl and acyloxymethoxycarbonyl;

Z¹ is one or more substituent selected fr m the group c nsisting f H; alkyl; hydroxy; alkoxy; aryloxy; hal gen; haloalkyl; haloalkoxy; nitro; amino; alkylamino; acylamino; dialkylamino; cyano; alkylthio; alkylsulfonyl; carboxyl derivatives; trihaloacetamide; acetamide; aryl; fused aryl; cycloalkyl; thio; monocyclic heterocycles; fused monocyclic heterocycles; and A, wherein A is defined above;

V is selected from the group consisting of $-N-(R^6)-$ wherein R^6 is selected from the group consisting of H; lower alkyl; cycloalkyl; aralkyl; aryl; and monocyclic heterocycles; or R^6 taken together with Y, forms a 4-12 membered mononitrogen containing ring;

Y, Y³, Z and Z³ are independently selected from the group consisting of hydrogen; alkyl; aryl; and cycloalkyl; or Y and Z taken together form a cycloalkyl; or Y³ and Z³ taken together form a cycloalkyl;

n is an integer 1, 2, or 3;

t is an integer 0, 1, or 2;

p is an integer 0, 1, 2, or 3;

R is X-R³ wherein X is selected from the group consisting of O, S and NR⁴, wherein R³ and R⁴ are independently selected from the group consisting of hydrogen; alkyl; alkenyl; alkynyl; haloalkyl; aryl; arylalkyl; sugars; steroids; polyalkylethers; alkylamido; alkyl N,N-dialkylamido; pivaloyloxymethyl; and in the case

of the free acid, all pharmaceutically acceptable salts thereof;

R¹ is sel cted from the group consisting of hydrogen; alkyl; alkenyl; alkynyl; aryl; carboxyl derivatives; haloalkyl; monocyclic heterocycles; monocyclic heterocycles optionally substituted with alkyl, halogen, haloalkyl, cyano, hydroxy, aryl, fused aryl, nitro, alkoxy, aryloxy, alkylsulfonyl, arylsulfonyl, sulfonamide, thio, alkylthio, carboxyl derivatives, amino, amido;

alkyl optionally substituted with one or more of halo, haloalkyl, hydroxy, alkoxy, aryloxy, thio, alkylthio, alkynyl, alkenyl, alkyl, arylthio, alkylsulfoxide, alkylsulfonyl, arylsulfoxide, arylsulfonyl, cyano, nitro, amino, alkylamino, dialkylamino, alkylsulfonamide, arylsulfonamide, acylamide, carboxyl derivatives, sulfonamide, sulfonic acid, phosphonic acid derivatives, phosphinic acid derivatives, aryl, arylthio, arylsulfoxide, or arylsulfone all optionally substituted on the aryl ring with halo, alkyl, haloalkyl, cyano, nitro, hydroxy, carboxyl derivatives, alkoxy, aryloxy, amino, alkylamino, dialkylamino, amido, aryl, fused aryl, monocyclic heterocycles; and fused monocyclic heterocycles, monocyclic heterocyclicthio, monocyclic heterocyclicsulfoxide, and monocyclic heterocyclic sulfone, which can be optionally substituted with halo, haloalkyl, nitro, hydroxy, alkoxy, fused aryl, or alkyl;

alkylcarbonyl, haloalkylcarbonyl, and arylcarbonyl;

aryl optionally substituted in n or m re
positi ns with hal, hal alkyl, alkyl, alk xy,
aryloxy, methylenedioxy, ethylenedioxy, alkylthio,
haloalkylthio, thi, hydroxy, cyano, nitro,
acyloxy, carboxyl derivatives, carboxyalkoxy,
amido, acylamino, amino, alkylamino, dialkylamino,
trifluoroalkoxy, trifluoromethylsulfonyl,
alkylsulfonyl, sulfonic acid, sulfonamide, aryl,
fused aryl, monocyclic heterocycles and fused
monocyclic heterocycles; and

$$\begin{array}{c} O \\ II \\ --C-N \end{array}$$
 wherein R^7 and R^4 are as defined above R^8

and provided that taken together with the nitrogen, R⁷ and R⁸ comprise an amino acid;

and

R¹¹ is selected from the group consisting of H, alkyl, aralkyl, alkenyl, alkynyl, haloalkyl or haloalkynyl or R¹¹ taken together with Y forms a 4-12 membered mononitrogen containing ring; and

- a pharmaceutically acceptable carrier.
- 22. A pharmaceutical composition according to Claim 21 wherein

wherein Y^1 is selected from the group consisting of $N-R^2$, O, and S;

R² is selected from the group consisting f H, alkyl, aryl, substituted alkyl, hydr xy, alkoxy, alkylcarb nyl, cyano, nitro, amino and m n cyclic heterocycles, arylcarbonyl, alk xycarbonyl, aryloxycarbonyl, haloalkoxycarbonyl, alkylthiocarbonyl, arylthiocarbonyl, acyloxymethoxycarbonyl; or R² taken together with R⁷ forms a 4-12 membered ring;

 \mathbb{R}^5 , \mathbb{R}^7 , \mathbb{R}^8 are independently selected from the group consisting of H, alkyl, alkenyl, alkynyl, cycloalkyl, bicycloalkyl substituted alkyl, arylalkyl, aryloxy, hydroxy, alkoxy, amino, alkylamino, arylamino, amido, alkylcarbonyl, arylcarbonyl, alkoxycarbonyl, aryloxycarbonyl, haloalkylcarbonyl, haloalkoxycarbonyl, alkylthiocarbonyl, arylthiocarbonyl, acyloxymethoxycarbonyl, substituted phenyl, arylacyl, monocyclic and bicyclic heterocycles, monocyclic and bicyclic heterocyclicalkyl and - SO_2R^{10} wherein R^{10} is selected from the group consisting of alkyl, amino and aryl which are all optionally substituted with one or more substituent selected from the group consisting of acylamino, amino, carbonyl, cyano, nitro, alkoxy, halo, alkyl, trifluoroalkyl, amido, alkylaminosulfonyl, alkylsulfonyl, alkylsulfonylamino, alkylamino, dialkylamino, aryloxy, thio, trifluoromethylthio, trifluoroalkoxy, and trifluoromethylsulfonyl or -NR7 and R8 taken together form a 4-12 membered ring wherein said ring optionally contains a heteroatom selected from the group consisting of O, N, and S wherein said ring is optionally substituted.

23. A pharmac utical c mpositi n according t Claim 22 wherein

V is $-N(R^6)$ - wherein R^6 is selected from the group consisting of H and lower alkyl;

n is 1:

t is 0 or 1; and

p is 0, 1 or 2.

- 24. A pharmaceutical composition according to Claim 23 wherein the compound is selected from the group consisting of
- (±)ethyl β -[[2-[[[3-[(aminoiminomethyl)amino]phenyl]-carbonyl]amino]acetyl]amino]pyridine-3-propanoate;
 - (±)β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]pyridine-3propanoic acid;
- (±)ethyl β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoate;

[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid;

(±)ethyl β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]-1,3benzodioxole-5-propanoate:

- (±)β-[[2-[[[3-[(aminoimin methyl)amino]phenyl]carbonyl]amino]acetyl]amino]-1,3benzodioxole-5-pr panoic acid;
- (±)ethyl β-[[2-[[[3-[(aminoiminomethyl)amino]naphthalen-1-yl]carbonyl]amino]acetyl]amino]pyridine-3-propanoate;
 - (±)β-[[2-[[[3-[(aminoiminomethyl)-amino]naphthalen-1-yl]carbonyl]amino]acetyl]amino]pyridine-3-propanoic acid;
- (±) ethyl β-[[1-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]-1-cyclopropyl]carbonyl]amino]pyridine-3-propanoate;
- (±) β-[[1-[[[3[(aminoiminomethyl)amino]phenyl]carbonyl]amino]cycloprop-1-yl]carbonyl]amino]pyridine-3-propanoic acid;
- (±) ethyl β-[[2-[[[3-[[imino[(phenylmethyl)amino]methyl]amino]phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoate;
- - β -[[2-[[[3-[(aminoiminomethyl)amino]-phenyl]carbonyl]amino]acetyl]amino]-3,5-dichlorobenzenepropanoic acid;
 - 3S-[[2-[[[3-(aminocarbonylamino)phenyl]-carbonyl]amino]acetyl]amino]-4-pentynoic acid;
 - ethyl 3S-[[2-[[[3-(aminocarbonylamino)phenyl]carbonyl]amino]acetyl]amino]-4-pentynoate;

- βS-[[2-[[[3-[(amin iminomethyl)amino]-2,5,6trifluor phenyl]carbonyl]amin]acetyl]amino]-4-pentynoic acid;
 - (±) β -[[2-[[[3-[(aminoiminomethyl)amino]-phenyl]carbonyl]amino]acetyl]amino]-3,5-bis(trifluoromethyl)benzenepropanoic acid;
 - (±) β -[[2-[[[3-[(aminoiminomethyl)amino]-phenyl]carbonyl]amino]acetyl]amino]-3,5-bis(trifluoromethyl)benzenepropanoic acid;
- ethyl (±) β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]-3,5bis(trifluoromethyl)benzenepropanoate;
 - (±) β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino][1,1'-biphenyl]-4-propanoic acid;
 - ethyl (±) β -[[2-[[[3-[(aminoiminomethyl)-amino]phenyl]carbonyl]amino]acetyl]amino][1,1'-biphenyl]-4-propanoate;
- (t) ethyl β -[[2-[[[3-[(aminoiminomethyl)amino]-5-(trifluoromethyl)-phenyl]carbonyl]amino]acetyl]amino]-3,5-bis(trifluoromethyl)benzenepropanoate;
- (±) β-[[2-[[[3-[(aminoiminomethyl)amino]-5(trifluoromethyl)phenyl]carbonyl]amino]acetyl]amino]3,5-bis(trifluoromethyl)benzenepropanoic acid;
 - (±) β-[[2-{[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]naphthalene-1-carboxylic acid;

- methyl (±) β-[[2-[[[3-[(aminoiminomethyl)-amin]phenyl]carbonyl]amino]acetyl]amino]naphthalene-1-carboxylate;
- (±) 3-[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]-2-oxopyrrolidine-1propanoic acid;
- 3R-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]-4-pentynoic acid;
- ethyl 3R-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]-carbonyl]amino]acetyl]amino]-4-pentynoate;
 - 3S-[[2-[[[3-[[[(phenylmethyl)amino]carbonyl]amino]phenyl]carbonyl]amino]acetyl]amino]-4-pentynoic acid;

 - 35-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]-carbonyl]amino]acetyl]amino]-4-pentynoic acid;
 - β-[[2-[[[3-(aminocarbonylamino)phenyl]-carbonyl]amino]acetyl]amino]pyridine-3-propanoic acid;
- ethyl \$\beta = \[[2 \[[3 (aminocarbonylamino) phenyl] carbonyl] amino] acetyl] amino] pyridine 3 propanoate;

- - (±)ethyl β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]furan-2-propanoate;
 - (±) β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]furan-3-propanoic acid;
- 3-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]pentanedioic acid;
- bismethyl ester 3-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]-amino]acetyl]amino]pentanedioate;
 - - (±) β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]furan-2-propanoic acid;
- ethyl (±) β -[[2-[[[3-[(aminoiminomethyl)amino]phenyl]-carbonyl]amino]acetyl]amino]furan-2-propanoate;
 - (±) β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]naphthalene-2-propanoic acid;

- (±) β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]thiophene-3-propanoic acid;
- (±) 2-[3-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]-4carboxybutyl]thio]benzoic acid;
- (±) 2-[3-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]-4carboxybutyl]sulfonyl]benzoic acid;
 - (±) β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]thiophene-2-propanoic acid;
- - (±) methyl 3-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]5-[(4-methylphenyl)thio]pentanoate;
 - (±) methyl 3-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]4-[[(4-methylphenyl)sulfonyl]amino]butanoate;
 - 3-[[2-[[[3-[(aminoiminomethyl)amino]-phenyl]carbonyl]amino]acetyl]amino]-4-[[(4-methylphenyl)sulfonyl]amino]butanoic acid;

- (±) 3-[[2-[[[3-[(amin iminomethyl)amino]phenyl]carbonyl]amin]ac tyl]amin]-5-[(4methylph nyl)thio]pentanoic acid;
- (±) 3-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]-5-[(4methylphenyl)sulfonyl]pentanoic acid;
- 3S-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]-carbonyl]amino]acetyl]amino]-4(phenylthio)butanoic acid;
- 2-[[2S-[[2-[[[3-[(aminoiminomethyl)-amino]phenyl]carbonyl]amino]acetyl]amino]-2-(carboxymethyl)ethyl]sulfonyl]benzoic acid;
 - 3S-[[2-[[[3-[(aminoiminomethyl)amino]-phenyl]carbonyl]amino]acetyl]amino]4-pentynoic acid;
- - 2-[[2S-[[2-([[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]-2(carboxymethyl)ethyl]thio]benzoic acid;

- (±)ethyl β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]methylamin]acetyl]amin]-pyridin -3-pr panoate;
- (±)β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]methylamino]acetyl]amino]pyridine3-propanoic acid;
 - (±)ethyl β -[[2-[[[3-[(aminoiminomethyl)-amino]phenyl]carbonyl]amino]-1-oxopropyl]-amino]pyridine-3-propanoate;
 - (±)β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]-1-oxopropyl]amino]pyridine-3-propanoic acid;
 - (±) β-[[2-[[[3-[(aminoiminomethyl)amino]-4methylphenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoic acid;
 - (±) β-[[2-[[[3-[[(aminoiminomethyl)amino]methyl]phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoic acid;
 - 3S-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]4-hydroxybutanoic acid;
 - (±) β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]-2-hydroxybenzenepropanoic acid;
 - (±) β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]-2hydroxy-5-methylbenzenepropanoic acid;

- (±) 3-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]-4-[(2hydroxyethyl)amin]-4- x butan ic acid;
- 2S-[[2-[[[3-[[aminoiminomethyl]amino]phenyl]-carbonyl]amino]acetyl]amino]-3-carboxypropyl 2-aminobenzoate;
- N-[2-[[[3-[(aminoiminomethyl)amino]phenyl]-carbonyl]amino]acetyl]- β -alanine, ethyl ester;
 - N-[2-[[[3-[(aminoiminomethyl)amino]-phenyl]carbonyl]amino]acetyl]-β-alanine;
- - β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]quinoline-3-propanoic acid;
- (±)ethyl β-[[2-[[[3-[[[(phenylmethyl)amino]carbonyl]amino]phenyl]carbonyl]amino]
 acetyl]amin]pyridine-3-propan ate;

ethyl β -[[2-[[[3-[[(phenylamino)carbonyl]-amino]phenyl]carbonyl]amino]acetyl]amino]-pyridine-3-propanoate;

β-[[2-[[[3-[[(phenylamino)carbonyl]amino]phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoic acid;

ethyl β -[[2-[[[3-(aminocarbonylamino)-phenyl]carbonyl]amino]acetyl]amino]-pyridine-3-propanoate;

β-[[2-[[[3-(aminocarbonylamino)phenyl]-carbonyl]amino]acetyl]amino]pyridine-3-propanoic acid;

ethyl β -[[2-[[[3-[[[(4-methylphenyl)sulfonyl]-amino]carbonyl]amino]phenyl]carbonyl]amino]-acetyl]amino]pyridine-3-propanoate;

β-[[2-[[[3-[[[(4-methylphenyl)sulfonyl]amino]-carbonyl]amino]phenyl]carbonyl]amino]acetyl]-amino]pyridine-3-propanoic acid;

ethyl β-[[2-[[[3-[(aminothioxomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoate;

β-[[2-[[[3-[(aminothioxomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]pyridine3-propanoic acid;

β-[[2-[[[3-[(aminothioxomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid;

3S-[[2-[[[3-[[(cyanoimino)(methylamino)-methyl]amino]phenyl]carbonyl]amino]acetyl]-amino]-4-pentynoic acid;

β-[[2-[[[3-[[(cyanoimino)[2-pyridinylmethyl)-amino]methyl]amino]phenyl]carbonyl]amino]-acetyl]amino]benzenepropanoic acid;

ethyl β-[[2-[[[3-[[(cyanoimino)[3pyridinylmethyl)amino]methyl]amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoate;

β-[[2-[[[3-[[(cyanoimino)[3-pyridinylmethyl)-amino]methyl]amino]phenyl]carbonyl]amino]-acetyl]amino]benzenepropanoic acid;

- ethyl 3S-[[2-[[[3-[[[(4-(amin sulfonyl)phenylm thyl]amino](cyanoimino)m thyl]amino]phenyl]carbonyl]amino]acetyl]amino]-4-pentynoate;
- 3S-[[2-[[[3-[[[(4-(aminosulfonyl)phenylmethyl]amino](cyanoimino)methyl]amino]phenyl]carbonyl]amino]acetyl]amino]-4-pentynoic acid;
- ethyl β -[[2-[[[3-[[amino(cyanoimino)methyl]amino]-phenyl]carbonyl]amino]acetyl]amino]-3,5-dichlorobenzenepropanoate;
- β-[[2-[[[3-[[amino(cyanoimino)methyl]amino]phenyl]carbonyl]amino]acetyl]amino]-3,5dichlorobenzenepropanoic acid;
- (±) 3,5-dichloro-β-[[2-[[[3-[(cyanoimino) (methylamino)methyl]amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid;

and

ethyl 3-[[2-[[[3-[[amino(cyanoimino)methyl]amino]-phenyl]carbonyl]amino]acetyl]amino]-4-pentynoate.

27. A pharmaceutical composition according to Claim 21 wherein

A is

wherein Y1 is N-R2; R2 taken together with R7 forms a 4-12 membered ring; and R⁸ is selected from the group consisting of H, alkyl, alkenyl, alkynyl, cycloalkyl, bicycloalkyl substituted alkyl, arylalkyl, aryloxy, hydroxy, alkoxy, amino, alkylamino, arylamino, amido, alkylcarbonyl, arylcarbonyl, alkoxycarbonyl, aryloxycarbonyl, haloalkylcarbonyl, haloalkoxycarbonyl, alkylthiocarbonyl, arylthiocarbonyl, acyloxymethoxycarbonyl, substituted phenyl, arylacyl, monocyclic and bicyclic heterocycles, monocyclic and bicyclic heterocyclicalkyl and - SO_2R^{10} wherein R^{10} is selected from the group consisting of alkyl, amino and aryl which are all optionally substituted with one or more substituent selected from the group consisting of acylamino, amino, carbonyl cyano, nitro, alkoxy, halo, alkyl, trifluoroalkyl, amido, alkylaminosulfonyl, alkylsulfonyl, alkylsulfonylamino, alkylamino, dialkylamino, aryloxy, thio, trifluoromethylthio, trifluoroalkoxy, and trifluoromethylsulfonyl or -NR7 and R8 taken together form a 4-12 membered ring wherein said ring optionally contains a heteroatom selected from the group consisting of O, N, and S wherein said ring is optionally substituted.

28. A pharmaceutical composition according to Claim 27 wherein

V is $-N(R^6)$ - wh rein R^6 is selected from the group consisting of H and lower alkyl;

n is 1;

t is 0; and

p is 1.

- 29. A pharmaceutical composition according to Claim 28 wherein the compound is selected from the group consisting of
 - (±)ethyl β-[[2-[[[3-[(4,5-dihydro-1H-imidazol-2-yl)amino]phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoate;
 - (±)β-[[2-[[[3-[(4,5-dihydro-1H-imidazol-2-yl)amino]phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoic acid;
 - (±) ethyl β-[[2-[[[3-[(4,5-dihydro-1H-imidazol-2-yl)amino]phenyl]carbonyl]amino]acetyl]amino]--3,5-bis(trifluoromethyl)benzenepropanoate;
 - (±) β-[[2-[[[3-[(4,5-dihydro-1H-imidazol-2-yl)amino]phenyl]carbonyl]amino]acetyl]amino]-3,5bis(trifluoromethyl)benzenepropanoic acid;
 - (±) ethyl β-[[2-[[[3-[(4,5-dihydro-lH-imidazol-2-yl)amino]phenyl]carbonyl]amino]acetyl]amino]-3,5-dichlorobenzenepropanoate;

- (±) β-[[2-[[[3-[(4,5-dihydr -1H-imidaz 1-2-y1)amin]phenyl]carbonyl]amino]acetyl]amino]3,5-dichl robenzenepropanoic acid;
- (±) 3,5-dibromo-β-[[2-[[[3-[(1,4,5,6tetrahydropyrimidin-2-yl)amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid;
 - (±) 3-bromo-5-chloro-β-[[2-[[[3-[(1,4,5,6tetrahydropyrimidin-2-yl)amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid;
- (±) [2-[2-[2-(2-hydroxyethoxy)ethoxy]ethoxy]ethyl] 3,5-dichloro-β-[[2-[[[3[(1,4,5,6-tetrahydropyrimidin-2-yl)amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoate;

 - (±) 3-bromo-5-chloro-2-hydroxy-β[[2-[[[3-[(1,4,5,6-tetrahydropyrimidin-2-yl)amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid;

- ethyl (±) 3-brom -5-chloro-2-hydroxy-β[[2-[[[3-[(1,4,5,6-tetrahydr pyrimidin-2-yl)amin]phenyl]carbonyl]amin]acetyl]amino]benzenepropan at ;
 - (±) 3,5-dichloro-2-hydroxy-β-[[2[[[3-[(1,4,5,6-tetrahydropyrimidin-2-y1)amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid;
- (±) 3,5-dichloro-β-[[2-[[[3-[(4,5-dihydro-1H-pyrrolidin-2-yl)amino]phenyl]carbonyl]amino]amino]acetyl]amino]-2-hydroxybenzenepropanoic acid;
 - (±) 3-bromo-5-chloro-β-[[2-[[[3-[(4,5-dihydro-1H-pyrrolidin-2-yl)amino]phenyl]carbonyl]amino]acetyl]amino]-2-hydroxybenzenepropanoic acid;
 - β-[[2-[[[3-[[5-phenyl-1H-imidazol-2-yl)-amino]phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoic acid;
 - ethyl β-[[2-[[[3-[[5-phenyl-1H-imidazol-2-yl) amino]phenyl]carbonyl]amino]acetyl]amino] pyridine-3-propanoate;
 - (±) ethyl 3,5-dichloro-β-[[2-[[[3[(1,4,5,6-tetrahydro-5,5-dimethylpyrimidin-2-yl)amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoate;
- (±) 3,5-dichloro-β-[[2-[[[3-[(1,4,5,6-tetrahydro-5,5-dimethylpyrimidin-2-yl)amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid;

(±) 3-bromo-5-dichloro-2-hydroxyβ-[[2-[[[3-[(1,4,5,6-tetrahydro-5,5-dimethylpyrimidin-2-yl)amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid;

and

ethyl(±) 3-bromo-5-dichloro-2-hydroxy-β-[[2-[[[3-[(1,4,5,6-tetrahydro-5,5-dimethylpyrimidin-2-yl)amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoate.

30. A pharmaceutical composition according to Claim 21 wherein

wherein Y² is selected from the group consisting of lower alkyl, substituted alkyl, phenyl, substituted phenyl, cycloalkyl, monocyclic heterocycles, -S-R⁹ and -O-R⁹ wherein R⁹ is selected from the group consisting of H, alkyl, substituted alkyl, phenyl, substituted phenyl and monocyclic heterocycles or R⁹ taken together with R⁷ forms a 4-12 membered ring; or

 Y^2 taken together with R^7 f rms a 4-12 membered ring which is pti nally substituted.

31. A pharmaceutical composition according t Claim 30 wherein

 Y^2 taken together with R^7 forms a 4-12 membered ring which is optionally substituted.

32. A pharmaceutical composition according to Claim 31 wherein

V is $-N(R^6)$ - wherein R^6 is selected from the group consisting of H and lower alkyl;

n is 1;

t is 0 or 1; and

p is 1.

- 33. A pharmaceutical composition according to Claim 32 wherein the compound is selected from the group consisting of
 - (±) ethyl β-[[2-[[[3-[(3,4,5,6-tetrahydro-2H-azepin-7-yl)amino]phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoate;
 - (±) β-[[2-[[[3-[(3,4,5,6-tetrahydro-2H-azepin-7-yl)amino]phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoic acid;

- (±) β-[[2-[[[3-[(3,4,5,6-tetrahydro-2H-azepin-7-yl)amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid;
- β-[[2-[[[3-[(3,4-dihydro-2H-pyrrol-5-yl)amino]-phenyl]carbonyl]amino]acetyl]amino]-pyridine-3-propanoic acid;
- (±)ethyl β-[[2-[[[4-chloro-3-[(3,4,5,6-tetrahydro-2H-azepin-7-yl)amino]phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoate;
- (±) β-[[2-[[[4-chloro-3-[(3,4,5,6-tetrahydro-2H-azepin-7-yl)amino]phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoic acid;
- (±) β-[[2-[[[3,5-bis[(3,4,5,6-tetrahydro-2H-azepin-7-yl)amino]phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoic acid;
 - βS-[[2-[[[3-[(3,4,5,6-tetrahydro-2H-azepin-7-yl)amino]phenyl]carbonyl]amino]acetyl]amino]-4-pentynoic acid;
- (±) ethyl β-[[2-[[[3-[(3,4,5,6-tetrahydro-2H-azepin-7-yl)amino]phenyl]carbonyl]amino]acetyl]amino]-3,5-dichlorobenzenepropanoate;

- (±) β-[[2-[[[3-[(3,4,5,6-tetrahydr -2H-azepin--7-yl)amino]phenyl]carbonyl]amino]acetyl]amino]-3,5-dichlor benzenepropanoic acid;
- (±) ethyl β-[[2-[[[3-[(3,4-dihydro-2H-pyrrol-5-yl)amino]phenyl]carbonyl]amino]acetyl]amino]-3,5-dichlorobenzenepropanoate;
- (±) β-[[2-[[[3-[(3,4-dihydro-2H-pyrrol-5-yl)amino]phenyl]carbonyl]amino]acetyl]amino]3,5-dichlorobenzenepropanoic acid;
- (±) ethyl 3,5-dichloro-β-[[2-[[[3[(2,3,4,5-tetrahydropyridin-6-yl)amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoate;
- (±) 3,5-dichloro-β-[[2-[[[3-[(2,3,4,5tetrahydropyridin-6-yl)amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid;
 - (±) 3,5-dichloro-2-hydroxy-β-[[2[[[3-[(3,4,5,6-tetrahydro-2H-azepin-7-yl)amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoic acid;

and

ethyl(±) 3,5-dichloro-2-hydroxy-β-[[2-[[[3-[(3,4,5,6-tetrahydro-2H-azepin-7-yl)amino]phenyl]carbonyl]amino]acetyl]amino]benzenepropanoate. 34. A pharmaceutical c mp sition acc rding to Claim 30 wherein

Y² is selected from the gr up c nsisting of 1 wer alkyl, substituted alkyl, phenyl, substituted phenyl, cycloalkyl and monocyclic heterocycles.

35. A pharmaceutical composition according to Claim 34 wherein

V is $-N(R^6)$ - wherein R^6 is selected from the group consisting of H and lower alkyl;

n is 1;

t is 0; and

p is 1.

- 36. A pharmaceutical composition according to Claim 35 wherein the compound is selected from the group consisting of
 - (±) ethyl β-[[2-[[[3-[(iminophenylmethyl)amino]phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoate;
 - βS-[[2-[[[3-[[imino(1-pyrrolidinyl)methyl]amino]phenyl]carbonyl]amino]acetyl]amino]-4-pentynoic acid;
 - (±) β-[[2-[[[3-[(iminophenylmethyl)amino]phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoic acid;

3,5-dichloro-β-[[2-[[[3-[[imino(1-piperidinyl)methyl]amino]phenyl]carbonyl]-amin]acetyl]amin]benzenepropan ic acid;

and

ethyl 3,5-dichloro-β-[[2-[[[3-[[imino(1-piperidinyl)methyl]amino]phenyl]carbonyl]-amino]acetyl]amino]benzenepropanoate.

- 37. A pharmaceutical composition according to Claim 30 wherein Y² is -S-R⁹ or -O-R⁹ wherein R⁹ is selected from the group consisting of H, alkyl, substituted alkyl, phenyl, substituted phenyl and monocyclic hereocycles or R⁹ taken together with R⁷ forms a 4-12 membered ring.
- 38. A pharmaceutical composition according to Claim 37 wherein

V is $-N(R^6)$ - wherein R^6 is selected from the group consisting of H, lower alkyl, substituted alkyl, cycloalkyl, aryl, substituted aryl, monocyclic heterocycles and benzyl;

n is 0;

t is 0; and

p is 1 or 2.

39. A pharmaceutical composition according to Claim 38 wherein the compound is selected from the group consisting of

ethyl β-[[2-[[[3-[(4,5-dihydrothiaz 1-2yl)amin]phenyl]carbonyl]amino]acetyl] amino]pyridine-3-pr pan ate;

β-[[2-[[[3-[(4,5-dihydrothiazol-2-yl)amino]phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoic acid;

β-[[2-[[[3-[[benzoxazol-2-yl)amino]phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoic acid;

ethyl β -[[2-[[[3-[[benzoxazol-2-yl)amino]-phenyl]carbonyl]amino]acetyl]amino]-pyridine-3-propanoate.

β-[[2-[[[3-[(5,6-dihydro-4H-thiazin-2-yl)-amino]phenyl]carbonyl]amino]acetyl]amino]pyridine-3-propanoic acid;

and

ethyl β -[[2-[[[3-[(5,6-dihydro-4H-thiazin-2-yl)-amino]phenyl]carbonyl]amino]acetyl]amino]-pyridine-3-propanoate.

40. A pharmaceutical composition according to Claim 21 wherein the compound is selected from the group consisting of

41. A method for treating conditions mediated by the α, β_1 integrin in a mammal in need of such treatment comprising administering an effective α, β_1 inhibiting amount of a compound of the formula

$$A = \begin{pmatrix} Y_0 \\ C \\ Z_0 \end{pmatrix}_{t} \begin{pmatrix} Y \\ C \\ Z_1 \end{pmatrix}_{n} \begin{pmatrix} C \\ H_2 \end{pmatrix}_{p} \begin{pmatrix} C \\ H_2 \end{pmatrix}_{p$$

or a pharmaceutically acceptable salt thereof, wherein

A is

wherein Y^1 is s lected from the group consisting of N-R², O, and S;

 R^2 is selected fr m the group consisting f H; alkyl; aryl; hydroxy; alkoxy; cyano; nitro; amino; alkenyl; alkynyl; amido; alkylcarbonyl; arylcarbonyl; alkoxycarbonyl; aryloxycarbonyl; haloalkylcarbonyl; haloalkoxycarbonyl; alkylthiocarbonyl; arylthiocarbonyl; acyloxymethoxycarbonyl; alkyl optionally substituted with one or more substituent selected from lower alkyl, halogen, hydroxyl, haloalkyl. cyano, nitro, carboxyl, amino, alkoxy, aryl or aryl optionally substituted with one or more halogen, haloalkyl, lower alkyl, alkoxy, cyano, alkylsulfonyl, alkylthio, nitro, carboxyl, amino, hydroxyl, sulfonic acid, sulfonamide, aryl, fused aryl, monocyclic heterocycles, or fused monocyclic heterocycles; aryl optionally substituted with one or more substituent selected from halogen, haloalkyl, hydroxy, lower alkyl, alkoxy, methylenedioxy, ethylenedioxy, cyano, nitro, alkylthio, alkylsulfonyl, sulfonic acid, sulfonamide, carboxyl derivatives, amino, aryl, fused aryl, monocyclic heterocycles and fused monocyclic heterocycle; monocyclic heterocycles; and monocyclic heterocycles optionally substituted with one or more substituent selected from halogen, haloalkyl, lower alkyl, alkoxy, amino. nitro, hydroxy, carboxyl derivatives, cyano, alkylthio, alkylsulfonyl, sulfonic acid, sulfonamide, aryl or fused aryl; or

R² taken together with R⁷ forms a 4-12 membered dinitrogen containing heterocycle optionally substituted with one or more substituent selected from the group consisting of lower alkyl, hydroxy,

k to, alkoxy, halo, phenyl, amin, carboxyl or carboxyl ster, and fused ph nyl;

- or R² taken together with R⁷ f rms a 5 membered heteroaromatic ring optionally substituted with one or more substituent selected from lower alkyl, phenyl and hydroxy;
- or R² taken together with R⁷ forms a 5 membered heteroaromatic ring fused with a phenyl group;

 R^7 (when not taken together with R^2) and R^4 are independently selected from the group consisting of H; alkyl; alkenyl; alkynyl; aralkyl; amino; alkylamino; hydroxy; alkoxy; arylamino; amido, alkylcarbonyl, arylcarbonyl; alkoxycarbonyl; aryloxycarbonyl; haloalkylcarbonyl; aryloxy; haloalkoxycarbonyl; alkylthiocarbonyl; arylthiocarbonyl; acyloxymethoxycarbonyl; cycloalkyl; bicycloalkyl; aryl; acyl; benzoyl; alkyl optionally substituted with one or more substituent selected from lower alkyl, halogen, hydroxy, haloalkyl, cyano, nitro, carboxyl derivatives, amino, alkoxy, thio, alkylthio, sulfonyl, aryl, aralkyl, aryl optionally substituted with one or more substituent selected from halogen, haloalkyl, lower alkyl, alkoxy, methylenedioxy, ethylenedioxy, alkylthio, haloalkylthio, thio, hydroxy, cyano, nitro, carboxyl derivatives, aryloxy, amido, acylamino, amino, alkylamino, dialkylamino, trifluoroalkoxy, trifluoromethyl, sulfonyl, alkylsulfonyl, haloalkylsulfonyl, sulfonic acid, sulfonamide, aryl, fused aryl, monocyclic heterocycles, fused monocyclic heterocycles; aryl optionally substituted with one or more substituent selected from halogen, haloalkyl, lower alkyl, alkoxy,

methylenedi xy, ethylenedi xy, alkylthio, haloalkylthi , thi , hydr xy, cyano, nitr , carboxyl derivativ s, aryloxy, amido, acylamino, amino, alkylamino, dialkylamin , trifluor alkoxy, trifluoromethylsulfonyl, alkylsulfonyl, sulfonic acid, sulfonamide, aryl, fused aryl, monocyclic heterocycles, or fused monocyclic heterocycles; monocyclic heterocycles; monocyclic heterocycles optionally substituted with one or more substituent selected from halogen, haloalkyl, lower alkyl, alkoxy, aryloxy, amino, nitro, hydroxy, carboxyl derivatives, cyano, alkylthio, alkylsulfonyl, aryl, fused aryl; monocyclic and bicyclic heterocyclicalkyls; -SO2R10 wherein R10 is selected from the group consisting of alkyl, aryl and monocyclic heterocycles, all optionally substituted with one or more substituent selected from the group consisting of halogen, haloalkyl, alkyl, alkoxy, cyano, nitro, amino, acylamino, trifluoroalkyl, amido, alkylaminosulfonyl, alkylsulfonyl, alkylsulfonylamino, alkylamino, dialkylamino, trifluoromethylthio, trifluoroalkoxy, trifluoromethylsulfonyl, aryl, aryloxy, thio, alkylthio, and monocyclic heterocycles; and

O || wherein R¹⁰ is defined above;

or NR⁷ and R⁸ taken together form a 4-12 membered mononitrogen containing monocyclic or bicyclic ring optionally substituted with one or more substituent selected from lower alkyl, carboxyl derivatives, aryl or hydroxy and wherein said ring optionally contains a heteroatom selected from the group consisting of O, N and S;

R⁵ is a lected from the group consisting of H, alkyl, alkenyl, alkynyl, benzyl, and phenethyl;

r

wherein Y2 is selected from the group consisting of alkyl; cycloalkyl; bicycloalkyl; aryl; monocyclic heterocycles; alkyl optionally substituted with aryl which can also be optionally substituted with one or more substituent selected from halo. haloalkyl, alkyl, nitro, hydroxy, alkoxy, aryloxy, aryl, or fused aryl; aryl optionally substituted with one or more substituent selected from halo, haloalkyl, hydroxy, alkoxy, aryloxy, aryl, fused aryl, nitro, methylenedioxy, ethylenedioxy, or alkyl; alkynyl; alkenyl; -S-R9 and -O-R9 wherein R9 is selected from the group consisting of H; alkyl; aralkyl; aryl; alkenyl; and alkynyl; or R9 taken together with R⁷ forms a 4-12 membered mononitrogen and monosulfur or monooxygen containing heterocyclic ring optionally substituted with lower alkyl, hydroxy, keto, phenyl, carboxyl or carboxyl ester, and fused phenyl; or R9 taken together with R' is thiazole; oxazole; benzoxazole; or benzothiazole; and

 R^5 and R^7 are as defined above;

or Y² (when Y² is carbon) taken together with R⁷ forms a 4-12 membered mononitrogen containing ring optionally substituted with alkyl, aryl or hydroxy;

or A is

where R² and R⁷ taken together form a 5-8 membered dinitrogen containing heterocycle optionally substituted with one or more substituent selected from the group consisting of lower alkyl, hydroxy, keto, phenyl, or carboxyl derivatives; and R¹ is selected from the group consisting of alkylcarbonyl, arylcarbonyl, alkoxycarbonyl, aryloxycarbonyl, haloalkylcarbonyl, haloalkylcarbonyl, haloalkoxycarbonyl, alkylthiocarbonyl, arylthiocarbonyl, or acyloxymethoxycarbonyl; and

R' is defined as above

or A is

where R² and R⁷ taken together form a 5-8 membered dinitrogen containing heterocycle optionally substituted with hydroxy, keto, phenyl, or alkyl; and

R⁴ are both selected from the group consisting of alkylcarbonyl, arylcarbonyl, alkoxycarbonyl, aryloxycarbonyl, haloalkylcarbonyl, haloalkoxycarbonyl, alkylthiocarbonyl, arylthiocarbonyl and acyloxymethoxycarbonyl;

Z' is on or mor substituent sel cted fr m the group c nsisting f H; alkyl; hydroxy; alkoxy; aryloxy; halog n; haloalkyl; haloalkoxy; nitr; amin; alkylamino; acylamino; dialkylamino; cyan; alkylthio; alkylsulfonyl; carboxyl derivatives; trihaloacetamide; acetamide; aryl; fused aryl; cycloalkyl; thio; monocyclic heterocycles; fused monocyclic heterocycles; and A, wherein A is defined above;

V is selected from the group consisting of -N-(R⁶)-wherein R⁶ is selected from the group consisting of H; lower alkyl; cycloalkyl; aralkyl; aryl; and monocyclic heterocycles; or R⁶ taken together with Y, forms a 4-12 membered mononitrogen containing ring;

Y, Y³, Z and Z³ are independently selected from the group consisting of hydrogen; alkyl; aryl; and cycloalkyl; or Y and Z taken together form a cycloalkyl; or Y³ and Z³ taken together form a cycloalkyl;

n is an integer 1, 2, or 3;

t is an integer 0, 1, or 2;

p is an integer 0, 1, 2, or 3;

R is X-R³ wherein X is selected from the group consisting of O, S and NR⁴, wherein R³ and R⁴ are independently selected from the group consisting of hydrogen; alkyl; alkenyl; alkynyl; haloalkyl; aryl; arylalkyl; sugars; steroids; polyalkylethers; alkylamido; alkyl N,N-dialkylamido; pivaloyloxymethyl; and in the case

of the free acid, all pharmaceutically acc ptable salts thereof;

R¹ is selected from the group consisting of hydrogen; alkyl; alkenyl; alkynyl; aryl; carboxyl derivatives; haloalkyl; monocyclic heterocycles; monocyclic heterocycles optionally substituted with alkyl, halogen, haloalkyl, cyano, hydroxy, aryl, fused aryl, nitro, alkoxy, aryloxy, alkylsulfonyl, arylsulfonyl, sulfonamide, thio, alkylthio, carboxyl derivatives, amino, amido;

alkyl optionally substituted with one or more of halo, haloalkyl, hydroxy, alkoxy, aryloxy, thio, alkylthio, alkynyl, alkenyl, alkyl, arylthio, alkylsulfoxide, alkylsulfonyl, arylsulfoxide, arylsulfonyl, cyano, nitro, amino, alkylamino, dialkylamino, alkylsulfonamide, arylsulfonamide, acylamide, carboxyl derivatives, sulfonamide, sulfonic acid, phosphonic acid derivatives, phosphinic acid derivatives, aryl, arylthio, arylsulfoxide, or arylsulfone all optionally substituted on the aryl ring with halo, alkyl, haloalkyl, cyano, nitro, hydroxy, carboxyl derivatives, alkoxy, aryloxy, amino, alkylamino, dialkylamino, amido, aryl, fused aryl, monocyclic heterocycles; and fused monocyclic heterocycles, monocyclic heterocyclicthio, monocyclic heterocyclicsulfoxide, and monocyclic heterocyclic sulfone, which can be optionally substituted with halo, haloalkyl, nitro, hydroxy, alkoxy, fused aryl, or alkyl;

alkylcarbonyl, haloalkylcarbonyl, and arylcarbonyl;

aryl pti nally substitut d in ne r more positi ns with halo, haloalkyl, alkyl, alk xy, aryloxy, methylenedi xy, ethylenedioxy, alkylthi, haloalkylthio, thi, hydr xy, cyano, nitro, acyloxy, carboxyl derivatives, carboxyalkoxy, amido, acylamino, amino, alkylamino, dialkylamino, trifluoroalkoxy, trifluoromethylsulfonyl, alkylsulfonyl, sulfonic acid, sulfonamide, aryl, fused aryl, monocyclic heterocycles and fused monocyclic heterocycles; and

$$C = R^7$$
 wherein R^7 and R^4 are as defined above

and provided that taken together with the nitrogen, R⁷ and R⁸ comprise an amino acid;

and

R¹¹ is selected from the group consisting of H, alkyl, aralkyl, alkenyl, alkynyl, haloalkyl or haloalkynyl or R¹¹ taken together with Y forms a 4-12 membered mononitrogen containing ring.

- 42. A method according to claim 41 wherein the compound is selected from
 - (±) ethyl β -[[2-[[[3-[(aminoiminomethyl)amino]phenyl]-carbonyl]amino]acetyl]amino]pyridine-3-propanoate;
 - (±)β-[[2-[[[3-[(aminoiminomethyl)amino]phenyl]carbonyl]amino]acetyl]amino]pyridine-3propanoic acid;

pyridine-3-propanoate.

- 43. A method according to Claim 41 wherein the condition treated is tumor metastasis.
- 44. A method according to Claim 42 wherein the condition treated is tumor metastasis.
- 45. A method according to Claim 41 wherein the condition treated is solid tumor growth.
- 46. A method according to Claim 42 wherein the condition treated is solid tumor growth.
- 47. A method according to Claim 41 wherein the condition treated is angiogenesis.
- 48. A method according to Claim 42 wherein the condition treated is angiogenesis.
- 49. A method according to Claim 41 wherein the condition treated is osteoporosis.
- 50. A method according to Claim 42 wherein the condition treated is ste por sis.

- 51. A method acc rding to Claim 41 wherein the c ndition treated is humoral hypercalcemia f malignancy.
- 52. A method according to Claim 42 wherein the condition treated is humoral hypercalcemia of malignancy.
- 53. A method according to Claim 41 wherein the condition treated is smooth muscle cell migration.
- 54. A method according to Claim 42 wherein the condition treated is smooth muscle cell migration.
- 55. A method according to Claim 53 wherein restenosis is inhibited.
- 56. A method according to Claim 54 wherein restenosis is inhibited.
- 57. A method according to Claim 41 wherein the condition treated is reumatoid arthritis.
- 58. A method according to Claim 42 wherein the condition treated is rheumatoid arthritis.
